“A healthy person smiles and laughs, is cheerful and happy. Health is a gift from Mother Nature, the power behind life. Health is your birthright, not disease. It is as natural to be well as it is to be born.”

SWAMI SIVANANDA
Yoga and Ayurveda are sister sciences. Together, they show a way to live naturally and achieve radiant physical, mental, and spiritual health.

As one of the most important spiritual and healing traditions of the world, Ayurvedic and yogic scriptures describe the ethics and daily, monthly, and yearly practices of a healthy life; this covers topics including diet and exercise, as well as the use of the breath, senses, emotions, and mind. Their approach to meditation provides a step-by-step guide to complete peace and harmony—a balance of the mind and the heart—opening up the deeper potential of human awareness.

Practical Ayurveda follows the vision of Swami Sivananda (1887–1963), a renowned Indian yoga master and medical doctor who wrote over 200 books on all aspects of yoga, as well as on Ayurveda.

It was Swami Vishnudevananda (1927–1993), an eminent disciple of Swami Sivananda, who, sent by his Master, brought the practice of yoga from India to the Western world. After establishing Sivananda Yoga Vedanta Centers in the Americas and Europe, Swami Vishnudevananda founded the Sivananda Yoga Dhanwantari Ashram, a unique training center in Kerala, South India, where the practice of yoga and Ayurveda are combined.

The daily Ayurvedic routine allows you to gradually develop a healthier lifestyle. The food choices presented in this book work for both the individual person’s constitution, and the practice of yoga and meditation.

While Ayurveda increases your prana (life energy) through diet, herbs, oils, and minerals, the practice of yoga and meditation teaches you to stabilize that prana in a more direct way—through postures, breathing exercises, deep relaxation, and meditation.

We hope that Practical Ayurveda will help you to heal yourself and to help you to manifest your full potential in body, mind, and spirit.

Swami Durgananda
Swami Sivadasananda
Swami Kailasananda
AYURVEDA AND THE FOUR GOALS OF LIFE

According to the classical Indian philosophy from which both Ayurveda and yoga originate, there are four goals of life. This book aims to help you focus on the goals of dharma and moksha.

What is Ayurveda?

Ayurveda means “science of life,” and is comprised of a vast body of information about healthy living and treating disease. It covers areas of medicine that range from psychology to surgery, and pediatrics to geriatrics. Originally passed on through word of mouth, Ayurvedic knowledge was eventually written down in the ancient Indian language Sanskrit. Charaka, Sushruta, and Vagbhata are the authors of the three main classical Ayurvedic scriptures.

Ayurveda and yoga

In recent times, Ayurveda has expanded beyond India into the modern Western world, where its focus on health and overall well-being has been widely appreciated, and this has contributed to its growing popularity.

Ayurveda and yoga are two sister sciences that both come from the same philosophy. However, Ayurveda focuses primarily on the goal of dharma (living the right way), while yoga focuses primarily on the goal of moksha (enlightenment). Both are practical systems with a holistic perspective – people are seen as beings with a unified body, mind, and consciousness. Those who visit the Sivananda Vedanta Centers across the world will find both yoga and Ayurveda taught and practiced there side by side.

DARMA

(the right way of living)

Dharma is the principle of living one's life in a way that promotes inner and outer health and harmony, and in accordance with the universal principle of peace. Following dharma means to be truthful to one’s nature, and acts from a sense of duty and respect toward it, rather than being driven by compulsive habits. This means living life with a sense of responsibility toward oneself, other people, and the world as a whole, and acting for the good of all. Ways to achieve this goal are covered throughout this book.

ARTHA

(material wealth)

A certain amount of money is needed to comfortably support oneself. Ayurveda and yoga place no judgment on the gaining of wealth, as long as it is done without causing harm to others, and that any abundance is shared.
MOKSHA (enlightenment)

Moksha means to overcome our limitations and become truly free within. This is a freedom from identification with the body and mind, and the realization that our true nature is a consciousness beyond those two things. This is a very difficult goal, and so the practices of hatha and raja yoga are devised to help one achieve it. Hatha yoga (pranayama, asanas, and relaxation) is covered in chapter 5, while raja yoga (positive thinking and meditation) is covered in chapter 6.

KAMA (sensory pleasure)

Ayurveda and yoga recommend moderation when it comes to the pursuit of sensory pleasure. While it is beneficial to experience the positive influences of art and nature, overindulging the senses can lead to addiction, frustration, and disease.

“Ayurveda is the knowledge of happy and unhappy, a good and bad life, and that which contributes to those four aspects.”

CHARAKA

WHAT ARE MY GOALS?

Sit in a comfortable position, close your eyes, and relax your body and mind. Detach yourself from the concerns of the past and future, and focus on the now. Ask yourself the following questions and let answers come from a deeper part of yourself:

- What is my purpose in life?
- How can I contribute to this world?
- What are my values and how can I uplift them?
- What gives me the highest amount of contentment?
- What is the next step in my development?
THE three doshas, the seven dhatus, the three malas; these constitute the human body according to Ayurveda.

SWAMI SIVANANDA
YOU
AND YOUR BODY

“The three doshas, the seven dhatus, the three malas; these constitute the human body according to Ayurveda.”

SWAMI SIVANANDA
AYURVEDA AND THE BODY

There are four aspects of the body that need to be kept in balance in order to maintain good health – these are the doshas, the dhatus, malas, and agni.

Understanding the body

We must examine Ayurveda’s understanding of how the body works in order to learn how we can maintain our health. This chapter will provide an outline of how the classical Ayurvedic scriptures describe the structures and functions of the body, and show you how your own body fits into that system.

A system of balance

Ayurveda teaches that the central principle of health is balance. Each of the four components here must be in a state of harmony – neither too strong nor too weak – for the body to remain healthy. This provides vitality by allowing greater capacity for prana (life energy required for all of the body’s functions), and immunity from disease. The following pages will examine these components in more detail.

“\The balance of the doshas is health, and imbalance is disease.\”

SWAMI SIVANANDA
MALAS (waste)
The body’s excretions—urine, stool, and sweat—are called malas. Passing them in a timely manner helps keep the body balanced, as otherwise they build up and can cause disease. For more information, see pp.26–27.

AGNI (fire)
The main form of agni is the body’s digestive fire. Healthy agni allows food to be digested so that strong tissues can be formed. It also prevents the buildup of ama, undigested food that acts as a toxin and leads to disease. For more information, see pp.26–27.
THE THREE DOSHAS

The doshas are energies that pervade the body and mind, each with different functions. All of the doshas can be found in everybody, but different people have more of some doshas than others – this determines a person’s constitution.

Doshas, elements, and gunas

Vata, pitta, and kapha are the three doshas – three energies that are crucial to the healthy functioning of the different body systems and the mind. Each dosha is made up of two of the five elements (air, earth, ether, fire, and water), the building blocks of all matter. The elements all have different characteristics (“gunas” in Sanskrit), and each has a principle – for example, water has the principle of fluidity. The doshas take on the characteristics of the elements from which they are made up. These characteristics define a dosha’s nature and its role within the body.

VATA

Vata is made up of the elements air and ether. Air gives it characteristics such as mobility and dryness, while ether makes it subtle and light.

Vata is the most important dosha in the body and mind, as it is the force of all movement (such as blood circulation) and sensation. The main seat of vata is the colon.

Vata’s functions include:
- Providing movement, such as for breathing, circulation, transmission of nerve signals, and elimination of waste.
- Providing all sensation in the body.
- Igniting agni.
- Supporting memory, drive, and understanding.

Air element
(movement)

Ether element
(space)
PITTA

Pitta is made up of the elements fire and water. It takes on characteristics such as heat and sharpness from fire, and fluidity and oiliness from water.

In the body, pitta is the source of transformation (such as digestion) and provides internal heat. The main seat of pitta is the stomach and small intestine.

Pitta’s functions include:
- **Digesting food** and fueling agni.
- **Producing blood** and coloring the skin.
- **Providing intelligence** and self-confidence.
- **Providing sight**.

KAPHA

Kapha is the dosha of earth and water. Qualities received by kapha from earth include heaviness and stability, and from water include oiliness and smoothness.

Kapha gives the body substance, strength, cohesion, lubrication, cooling, and immunity. It is also responsible for healing. The main seat of kapha is in the stomach and chest.

Kapha’s functions include:
- **Providing moisture** to food in the stomach.
- **Providing strength** and cooling to the heart and the sensory organs.
- **Stabilizing and lubricating** the joints.
- **Providing taste**.
REVEAL YOUR CONSTITUTION

A person’s constitution is determined by how much of each dosha they received at conception. This affects their body and mind. Knowing your constitution is key to your health, as it is essential for understanding which lifestyle is best suited to you.

Self-assessment questionnaire

The following questionnaire will give you an idea of your constitution. However, it is not intended to replace the expertise of an Ayurvedic practitioner, who can give you a more accurate assessment.

For each question, choose the answer that best applies and give it one point. If more than one answer fits, give each half a point. If, for a particular question, you feel that the most appropriate answer has varied during your life, pick the answer that best fits the times when your life was stable or you were in good health.

Q How would you describe your body?
   a I have a slender, narrow frame with delicate bones, lean muscles, and well-defined veins and tendons.
   b I have a medium frame with defined musculature.
   c I have a sturdy, broad frame with large, solid bones. I can easily build up muscle and have a good layer of fat/padding beneath my skin.

Q How would you describe your joints?
   a My joints are small. Occasionally they make cracking noises.
   b I have flexible joints that are average in size.
   c I have broad and firm joints.

Q How would you describe your skin?
   a My skin is dry and thin, and can feel rough and cool to touch.
   b My skin is soft and warm, and often moist.
   c My skin is soft, moist to oily, cool, and firm.

Q How would you describe your complexion?
   a My skin can have irregular pigmentation. It tans easily.
   b My skin has a healthy blush, and I have freckles or moles.
   c I have an even complexion.

Q How would you describe your hair?
   a My hair is fine and tends to be dry.
   b My hair is fine and tends to be slightly oily. There may be signs of early graying or balding.
   c My hair is lush, thick, dense, and slightly oily.

Q How would you describe your nails and lips?
   a My nails are dry and brittle, and they can break easily. My lips are dry and quite thin.
   b My nails are flexible and soft. My lips are pink and soft with a symmetrical shape.
   c My nails are thick, smooth, and hard. My lips are pale, soft, and full.
Q Do you perspire much, and how strong is your body odor?

a I sweat very little.
b I sweat easily and in large amounts. My body odor can become strong and unpleasant.
c I do sweat, but I never notice much body odor.

Q Take a few deep breaths and then feel your pulse at your wrist. (For this, it is best to be sitting down without having had any caffeine beforehand, or much stress or excitement.)

a My pulse is quick and soft. It isn’t easy to define a definite rhythm — it moves like a snake.
b My pulse is strong and regular. It is neither fast nor slow, and feels like a jumping frog.
c I have a full, regular, and slow pulse that moves like a swan.

Q Do you enjoy doing exercise, and how often do you feel the need to move?

a I enjoy being active and find it hard to sit still. My movements are quick and I tend to fidget.
b I enjoy a good workout with a set goal and that requires precise and directed movements.
c I’m not always motivated to exercise, and find it easy and enjoyable to sit still for a good amount of time. I prefer to move slowly rather than quickly.

Q How much do you weigh, and how easily do you lose or gain weight?

a I tend to have lower weight than average and can lose weight easily.
b My weight is average. I can both gain and lose weight.
c I have a well-built body. I can easily gain weight, which is then hard to lose.

Q How is your sleep, and what time do you wake up in the morning?

a I’m a light sleeper. I tend to sleep less than average and to wake up early in the morning.
b I sleep well and need about 6–8 hours of sleep.
c I sleep deeply and restfully. I like to sleep for a long time, and then find it difficult to wake up.

Q What types of food do you most like to eat?

a I prefer warm food and soups. I enjoy salty, sour, or sweet food.
b I prefer cold, sweet, and bitter food. Sometimes I enjoy salads and raw food.
c I prefer warm food. Pungent, dry, and light food suits me best.

Q How would you describe your speech?

a I’m talkative and likely to speak fast. I’m liable to mumble, and maybe even stutter.
b I can be eloquent, and speak clearly and full of confidence. I have a strong voice.
c My speech is deliberate, measured, and steady. I have been told I sound soothing.

Q What sort of climate do you cope with best?

a I prefer it when the weather is hot, and I am very sensitive to the cold and the wind.
b I find it difficult to tolerate heat and direct strong sunshine. I prefer cooler temperatures.
c I can tolerate both hot and cold weather. Warm temperatures are best. Dampness and cold can become uncomfortable.

Q How would you describe your hunger?

a My hunger varies, it can be either strong or weak. If I’m distracted, I can easily forget I’m hungry and skip meals.
b My hunger is strong, regular, and frequent. When I’m hungry, I need to eat right away.
c My hunger is regular, but generally weak. I’m often not very hungry, especially in the morning, and can make do with two meals a day.
Q How would you describe your digestion, and how do you feel after eating a meal?

a  My digestion varies. I can feel full quickly, even though I was very hungry to start with.
b  I have a strong digestion. My hunger often comes back relatively quickly after a full meal.
c  My digestion takes time, and it’s better when I eat slowly. I can go a long time between meals without feeling hungry.

Q How do you react to being stressed?

a  I get nervous and anxious, and I often feel insecure.
b  I’m quick to anger and get irritated or impatient easily.
c  I usually remain calm and level-headed. It takes a lot to get a reaction out of me.

Q How frequent are your bowel movements and what consistency are your stools?

a  My bowel movements often are less than once per day. My stools are dry and hard, and I’m liable to have constipation and gas.
b  My bowel movements often are more than once per day. My stools are soft and copious, and they have a tendency to be loose or liquid.
c  My bowel movements are regular, and my stools are well formed and in moderate quantity.

Q How would you describe your thoughts?

a  I can think quickly on my feet and often have many ideas. My attention often wanders and I find it hard to focus on one single thing.
b  My thoughts are clear and distinct, and I prefer analytical thinking and planning.
c  My thoughts tend to be thorough and methodical. I’m slow to develop new ideas. I like to stay on one topic.

Q How well do you adapt to change?

a  I can adapt well to change – it suits my nature.
b  I approach change as a challenge that I can master.
c  I dislike change and find it hard to adapt. I prefer a steady routine.

Q How do you find learning new things?

a  I learn very quickly if I focus.
b  I have a sharp intellect and a good ability to focus.
c  It takes time to learn new things.

Q How are your energy and endurance levels?

a  My energy comes easily and in quick, short bursts.
b  I have good energy and tend to push myself.
c  I’m slow to get going, but have good endurance.

Q How do you experience your emotions?

a  My mood can change quickly. I have strong likes and dislikes.
b  When provoked, my emotions are strong. I can forgive easily.
c  My mood is stable. I can sometimes come across as boring. Once I’m upset, I find it hard to forgive.

Q How would you describe your memory?

a  I have a very good short-term memory. My long-term memory is poor.
b  I generally remember things well.
c  Once I have learned something, I have excellent memory, especially in the long-term.
Your results
Count the number of marks you gave to a, b, and c respectively; **a stands for vata, b for pitta, and c for kapha.** The results will give you an idea of which doshas are dominant in your constitution, with the highest-scoring dosha being the most dominant.

**Types of constitution**
Most people have a constitution (NB not “a dosha”) with two dominant doshas – these are indicated by the two highest scores. Some people have roughly equal amounts of each dosha in their constitution, so will have a fairly even score for all doshas. A constitution where one dosha is completely dominant over the two others (which are both equally low) is very rare.

**Dosha characteristics**
On the following spreads, you will learn about the full spectrum of possible characteristics imbued by each dosha. As we are all made up of a combination of the doshas, so there may be some qualities on the page for your dosha that are not entirely true for you (even if you have a particularly high score for one dosha).

**VATA (A)**
If vata was your highest-scoring dosha or one of your highest-scoring doshas, move on to “The vata mind and body” (pp.20–21). Here you can find out which qualities someone with a vata constitution is likely to have. Look for blue vata boxes throughout the book to find information specifically for those with vata as one of their dominant doshas.

**PITTA (B)**
If pitta was your highest-scoring dosha or one of your highest-scoring doshas, move on to “The pitta mind and body” (pp.22–23). Here you can find out which qualities someone with a pitta constitution is likely to have. Look for red pitta boxes throughout the book to find information specifically for those with pitta as one of their dominant doshas.

**KAPHA (C)**
If kapha was your highest-scoring dosha or one of your highest-scoring doshas, move on to “The kapha mind and body” (pp.24–25). Here you can find out which qualities someone with a kapha constitution is likely to have. Look for green kapha boxes throughout the book for information specifically for those with kapha as one of their dominant doshas.
THE VATA MIND AND BODY

The vata constitution is predominantly characterized by movement. The vata mind is sensitive and creative. This leads to a slender build and active body functions, such as quick speech.

The vata mind

The influence of air and ether gives the vata mind properties of movement, lightness, speed, and irregularity (such as being able to understand and learn, but also being quick to forget). The diagram below provides more qualities associated with the vata mind.

THE QUALITIES OF VATA

These are the characteristics of vata as described in the classical Ayurvedic scriptures. They help us understand the effect vata has on us.
The vata body

The influence of vata leads to a lean build and delicate structures. The vata body’s functions tend to be active, unstable, and irregular. As functions fluctuate more readily than structures, they can be used as indicators to work out if vata has been increased or upset by your current lifestyle.

**Tendons and veins** stand out.

**Thin, fine, dry hair.**

**Thin, dry, cool skin** with early wrinkling.

**Hard, brittle, thin nails.**

**Lean musculature.**

**Instable, delicate joints** that can make cracking noises.

**Long and narrow limbs,** fingers, or toes.

**This is** the female vata form. Body structures are given on the left, and body functions on the right.

Light, short, and **easily disturbed sleep.**

Quick, **undirected movements** of eyes and limbs.

**Can be** talkative with fast and soft speech.

**Hunger** is sometimes strong, but can also be absent.

Prefers warm temperatures and finds the cold and wind uncomfortable.

Quick, light, and **changing movements.**

Susceptible to catching a light cold.

This is the male vata form.
THE PITTA MIND AND BODY

Clarity and heat characterize the pitta mind and body. This leads to an ambitious mind with a sharp intellect, and an athletic build and intense body functions, such as an active metabolism.

The pitta mind

The influence of fire and water gives the pitta mind properties of penetration and transformation (such as a sharp intelligence and a proneness to anger). The diagram below provides more qualities associated with the pitta mind.

THE QUALITIES OF PITTA
These are the characteristics of pitta as described in the classical Ayurvedic scriptures. They help us understand the effect pitta has on us.

hot
sour, light
liquid, sharp
slightly oily
quickly penetrating
slightly foul smelling

structured, organized, and goal-oriented.

Sharp intelligence and comprehension.

Quick learning, clear thinking, and good memory.

Driven and competitive.

Hot headed.

Eloquent.

Prone to judge others and themselves.

The pitta mind is sharp and clear-thinking.

Often takes responsibility.
The pitta body

The influence of pitta leads to a medium-sized build with flexible joints. The pitta body’s functions are intense and sharp in nature. As functions fluctuate more readily than structures, they can be used as indicators to work out if pitta has been increased or upset by your current lifestyle.

Symmetrical features.

Fine, slightly oily hair.

Average weight, finds both losing and gaining weight easy.

Moist, oily, and elastic skin, with occasional freckles and moles.

Elastic, shiny nails.

Well-defined muscles.

Flexible, elastic joints and ligaments.

Average-sized limbs.

The head becomes hot easily.

Clear, determined, and confident speech.

Sweats easily and profusely with a strong odor.

A very active metabolism with intense hunger and thirst.

Directed, precise movements.

Intolerant to heat; enjoys the cold.

Prone to inflammation.

This is the female pitta form. Body structures are given on the left, and body functions on the right.

This is the male pitta form.
THE KAPHA MIND AND BODY

Structure and stability characterize the kapha mind and body. The kapha mind is patient and deliberate, while the kapha body has a sturdy build and slow-working body functions, such as a slow metabolism.

The kapha mind

The influence of earth and water gives the kapha mind properties of stability and endurance (such as cool-headedness and good memory). The diagram below provides more qualities associated with the kapha mind.

THE QUALITIES OF KAPHA

These are the characteristics of kapha as described in the classical Ayurvedic scriptures. They help us understand the effect kapha has on us.

cold
oily
heavy
stable, soft
slow, unmoving
sweet, viscous, sticky

Endowed with excellent long-term memory.

Long-term thinking and planning.

Good natured.

Slow to change.

Tolerant, courageous, patient, and generous.

The kapha mind is stable and calm.

Stable and calm.

Slow to learn.

Deliberate in reacting.

The capacity to enjoy sense pleasures.
The kapha body

The influence of kapha leads to a compact, sturdy physique with potential for muscle and fat buildup. The kapha body’s functions are slow (sometimes lethargic) and stable. As functions fluctuate more readily than structures, they can be used as indicators to work out if kapha has been increased or upset by your current lifestyle.

- Round, broad features.
- Tends to gain weight.
- Moist, oily, cold, firm, and thick skin.
- Thick, dense, oily hair.
- Thick, strong nails.
- Large, well-developed muscles.
- Firm, broad, and well-lubricated joints and firm ligaments.
- Strong, sturdy, large bones.
- Has good immunity.
- Long, deep, restful sleep.
- Slow, soothing speech.
- Moderate amount of sweat that doesn’t smell much.
- A slow metabolism, and doesn’t have much hunger or thirst.
- Slow, strong movements.
- Has good endurance.

This is the female kapha form. Body structures are given on the left, and body functions on the right.

This is the male kapha form.
HOW THE BODY BUILDS IMMUNITY

Agni (digestive fire), dhatus (tissues), ojas (tissue protection), and malas (waste) are all vital for the body’s health. All four are closely linked, and their health and function depend on each other.

Aspects of immunity

In Ayurveda, agni means “fire,” and refers to the body’s digestive fire. It is responsible for all processes of transformation, most important of which is building healthy dhatus.

The seven dhatus are plasma; blood; muscle and skin; fat; bone; nerve tissue and bone marrow; and reproductive tissue. They are created in a chain, with each digested by agni to produce the next. Food is digested to produce the first dhatu, plasma, then plasma is digested to produce blood, and so on.

Ojas is created last in the dhatu chain, and so is often called the “eighth dhatu.” It is a substance that supports prana (life energy) in the body and provides immunity from disease.

Malas refers to the body’s excretions, such as urine, stool, and sweat. They must be eliminated efficiently to maintain the health of the body. The flowcharts on the right show the effects of weak and healthy agni, and how this affects dhatus, ojas, and immunity.

Ama and weak agni

If agni is weak, the doshas are unbalanced, or malas are eliminated inefficiently, and ama (undigested food) builds up in the body. It acts as a toxin and disrupts the body’s healthy function. To prevent ama, maintain healthy agni through diet and exercise (see pp.56–57).
“All disease occurs due to the disfunction of agni.”

CHARAKA

THE BODY HAS MORE IMMUNITY
Increased ojas means the body has more capacity for prana and, combined with healthy dhatus, has more immunity from disease. There is no buildup of ama.

THE BODY HAS LESS IMMUNITY
Reduced ojas means the body has less capacity for prana and less immunity. Unhealthy dhatus allow elevated doshas to settle, causing disease. The buildup of ama also leads to disease.
“Health is the state in which you sleep well, digest your food well, are at ease and free from any kind of disease.”

Swami Sivananda
THE AYURVEDIC LIFESTYLE

“Health is the state in which you sleep well, digest your food well, are at ease and free from any kind of disease.”

SWAMI SIVANANDA
A HEALTHY LIFESTYLE

The Ayurvedic lifestyle is based on three things: routine, moderation, and tuning in to the natural rhythms of the doshas and agni.

What is healthy?

Health is a positive state of happiness achieved through the normal condition of the doshas, dhatus (tissues), agni (digestive fire), and malas (waste), as well as a serene state of body, mind, and senses.

Ill-health starts with a dosha imbalance. First one or more of the doshas become “irritated” (a minor imbalance). If they are not pacified, they will increase until they are “elevated” (a more significant imbalance) and start to cause disease in the body. The build-up of ama (toxins), inefficient elimination of malas, and weak agni also contribute to poor health.

The information and lifestyle practices shown in this chapter should be performed by people of all constitutions at all times. Look out for boxes that provide information for those with a dominant dosha(s). Instructions on how to tailor your lifestyle to your personal needs will appear in the next chapter.

“Have faith in yourself; do the right thing; help others. This is the key to success, health, and happiness.”

SWAMI SIVANANDA

ROUTINE

Performing healthy practices at the same time each day embeds them in your lifestyle. Your body will know when to prepare itself to wake up, digest food, and go to sleep. For more information about how adapting your daily routine can benefit your health, see pp.32–33.

MODERATION

Moderation provides balance to our lives and prevents overindulgence. Most commonly, the road to ill health begins with a lapse in judgment. Even though we know better, we frequently choose to make unhealthy choices, most often in pursuit of sense pleasures. This might be overloading the stomach with an excessive meal and disrupting our sleep cycle by staying up too late and sleeping during the day, or suppressing natural urges to cry, yawn, or even go to the bathroom.
NATURAL FLUCTUATIONS

The influence of the doshas on our bodies and the strength of our agni constantly change due to the time of day (see pp.32–33), our age, and the seasons (see below). We must tune into these changes to stick to a healthy lifestyle.

PHASES OF LIFE

Make sure you take into account the strength of the doshas at each stage of life, as this will affect how much you need to balance them.

Childhood is the time of kapha. Children need kapha to grow, so it should be supported and not irritated.

Adulthood is the period of pitta. Your lifestyle should follow your dosha levels (see pp.48–49) and the influence of the seasons.

Old age is influenced heavily by vata, so make sure to be aware when it is accumulating so that you can pacify it.

THE SEASONS

The strength of agni and the doshas varies throughout the seasons. In the classical Ayurvedic scriptures, the seasons are described as winter, summer, and rainy, according to India’s subtropical climate. These terms can be equated to the seasons of the world’s temperate regions. Vata is also sensitive between the seasons, and may need pacifying.

In winter, vata increases and should be pacified. Eat a nourishing diet to satisfy growing agni. Kapha will accumulate, so try to keep warm.

In spring, the kapha accumulated in winter melts, producing allergy and fatigue. Make sure to reduce and eliminate this excess kapha.

The summer heat weakens agni and depletes energy. Pitta accumulates and should be pacified, especially if there is rain.

In fall, vata again accumulates, which further weakens agni. Make sure that you strengthen agni during this period.
A DAILY ROUTINE

The strength of each dosha varies throughout the day, affecting how well our bodies perform different functions. To maintain balance, build your daily routine around when each dosha is strongest.

The daily rhythm of the doshas

The body and mind follow an internal clock—a cycle of 24 hours. At different times of the day, the doshas change strength, and with them their influence on the body and mind. By adapting your daily routine to these phases, you are keeping the doshas well-balanced, ensuring they work effectively. For example, agni (digestive fire) is most active when pitta is strong during the daytime (10 a.m. to 2 p.m.), so this is when you should eat your largest meal.

The daily rhythm of the individual doshas’ strength influences our experience of the doshas within our bodies. For example, a person who has kapha as one of the dominant doshas in their constitution may find it particularly difficult to get up during the time kapha is strong. This is because any natural heaviness from his or her constitution is added to by the extra strength of kapha at that time of day. It is therefore especially important for them to get up before 6 a.m. (during vata time), when the strength of vata counteracts their naturally high kapha levels, making them feel lighter.

Keeping to a routine

Regularity in your routine is essential. Getting up, eating, and going to bed at the same time each day will provide an ideal framework for a healthy life and a day full of energy. All of the body’s processes will benefit from this regularity. For example, eating your meals at the same times each day means your agni will know to become active at those times.
A DAILY ROUTINE

**KAPHA**

Get up before 6 a.m. to make the most of the energy and lightness provided by the strength of vata. This is a good time for meditation and yoga.

**PITTA**

The fiery energy of pitta can make it difficult to go to sleep after 10 p.m.

Get up before 6 a.m. to make the most of the energy and lightness provided by the strength of vata. This is a good time for meditation and yoga.

Agni is less active, as it is slowed down by strong kapha. Breakfast should therefore be light, or may even be skipped by those with dominant kapha.

**VATA**

4–6 a.m. is called brahma muhurta. At this time, harmonious vibrations boost the effects of yoga and meditation.

This is the time when agni is most active, fueled by the strength of pitta. Make sure to have your largest meal of the day at this time so that it can be properly digested.

**SLEEP FOR VATA**

Those of a vata nature need the most sleep (about 8–9 hours each night). To help soothe restlessness before bed, they should have a hot bath or oil massage during vata time, then go to bed during kapha time to ensure restful sleep.

**SLEEP FOR PITTA**

People of a pitta nature need 7–8 hours of sleep each night. They benefit from turning off their screens an hour before going to bed. Calming breathing exercises and meditation after 6 p.m. will help them get to sleep.

**SLEEP FOR KAPHA**

Those with a kapha nature only need about 7 hours of sleep. They should get up during vata time (before 6 a.m.) to get the best start to the day. Balanced kapha types have little problem getting restful sleep.
TAKING CARE OF YOUR BODY

Cleanliness is a key part of an Ayurveda, and there are many practices that are recommended as part of a healthy Ayurvedic lifestyle. Having a clean body will make you feel better and also be beneficial to your health.

A morning routine

Ideally, you should perform each of these practices every day, but practices that are new to you are best built into your routine gradually. To get an idea of where you can start, use the guide on pp.40–43.

1. **BRUSH YOUR TEETH**
   Use a toothbrush to thoroughly clean your teeth. You may want to use an Ayurvedic toothpaste that contains herbs with antiseptic and anti-inflammatory properties, such as neem or cloves.

2. **CLEAN YOUR TONGUE**
   Scraper away the coating on your tongue that accumulates nightly. Use a silver, copper, or steel tongue cleaner (not plastic). Start at the back and gently move to the front, repeating three to four times.

6. **PERFORM NASYA**
   Apply plain sesame oil to your nostrils by dabbing a drop of oil onto your finger and massaging the inside of each nostril. This practice (called “nasya”) keeps the nasal passage clear and alleviates headaches.

7. **PERFORM OIL PULLING**
   Place 1–2 teaspoons of plain sesame oil or warm water in your mouth, gently move the liquid back and forth for up to 5 minutes, then spit it out. This practice strengthens your gums and reduces bacteria in your mouth.

“Health is wealth. Tune yourself with nature. Observe the laws of hygiene. Enjoy immortal bliss.”

SWAMI SIVANANDA
“Have a glass of hot water early in the morning—it will help ignite agni, lubricate the body, and support bowel movements.”

3 CLEAR YOUR BOWELS

It is best to have a daily bowel movement first thing in the morning. Timely and regular elimination of the waste products gives lightness to the body and prevents disease caused by ama (see pp.26–27).

4 REFRESH YOUR EYES

Refresh and clean your eyes by dabbing your eyes and washing your face with cold water. This will remove any mucus or dirt that has built up in your eyes during the night while you were asleep.

5 CLEAR YOUR NASAL PASSAGE

Use a neti pot to clear excess mucus from your nose and sinuses. Mix ½ teaspoon salt with 1 cup warm water, and pour it into one nostril using the pot. When done, blow out the remaining water from each nostril.

8 INHALE AROMAS

Light some incense (organic incense is best). Gently inhale the smoke to pacify kapha and ease morning heaviness. Scents that are recommended include sandalwood, rose, frankincense, and champa.

9 PERFORM AN OIL MASSAGE

Oil massages (see pp.36–37) are recommended for everyone. The simplest oil to use is sesame oil (good for vata and kapha). Those with pitta can use cooling coconut oil. For more about how to choose oils, see pp.38–39.

10 SHOWER OR TAKE A BATH

Ayurveda places great importance on cleanliness. Washing the body should be part of everyone’s morning routine. In order to protect your hair and eyes, avoid using very hot water on your head.
SELF-MASSAGE

Massages are part of an Ayurvedic lifestyle due to their many benefits. Use these instructions to perform a self-massage at home, and at a time that suits your schedule.

Performing a self-massage

A massage is best performed in the morning or late afternoon, but if needed, doing a massage any time is better than not doing one at all. Your stomach should be neither too full nor too empty. Sit on a warm, stable surface in a room that is around 77°F (25°C). Use more oil between the steps as required. If you are short on time, you can do only steps 1 and 2 as a simple alternative.

1. **Take a handful of oil** in each hand and massage the top of your head using your open palms, then fingertips.

2. **Massage each palm**, then interlock your fingers, gently tightening them and gently pulling your hands apart. Then do the same to your feet, massaging your soles and interlocking your fingers and toes.

3. **Massage your forehead** with horizontal strokes, your temples and cheeks with circular motions, and your chin with horizontal strokes.

PHYSICAL BENEFITS
- Nourishes the body’s dhatus.
- Removes fatigue from the body.
- Promotes restful sleep.
- Relieves tension in the muscles.
- Boosts blood circulation.
- Protects against aging.
- Pacifies the doshas.

Use a circular motion to massage your temples.

Press down firmly, without causing any discomfort.

Use your opposite thumb to massage the palm of your hand.

Use your oil man and save your doctor fees.
4. **Now massage your throat**, neck, and shoulders with upward and downward strokes.

5. **Start on your shoulders** and stroke down your arms on the outside, stroking back up on the inside. Pay attention to the shoulder and elbow. While vata and pitta are soothed by strokes along the lines of the body hair, kapha benefits from emphasizing the strokes going against the lines of the hair.

6. **Massage your legs** in the same way as the arms with both hands. Pay attention to the hips and knees. Strokes along the lines of the body hair soothe vata and pitta, while kapha benefits from emphasis on strokes against the body hair.

7. **Massage your abdomen** and chest. Gently stroke up and down over your chest bone.

8. **Massage your back** and buttocks. Finish the massage with a long stroke from your heart to each hand, and from each hip to each foot.

“Pay your oil man and save your doctor fees.”

**Tamil Proverb**

 massage_036-039_massage.indd   37
02/02/2018   14:37
Choosing massage oils

Massages can be tailored directly to the needs of your body by choosing the correct massage oil. A system of balance dictates the effect of oils on different conditions. For example, pitta is hot and sharp, so the oils chosen to pacify elevated pitta are cooling and soothing (see the boxes right and opposite).

Dry powder massages

Oil massages are the most common form of massage. However, digesting oil rubbed into the skin requires strong agni, and so when agni is weak (such as when there is ama, fever, or infection), dry or dry powder massages are more appropriate. Dry massages simply use silk gloves rather than oil, whereas dry powder massages use an herbal paste. Dry powder massages are heating, stimulating, and dehydrating, making them beneficial for weak agni and excess kapha.

IMPORTANT NOTE

Oil massages should not be performed if you have ama (undigested food, see pp.26–27), fever, acute infection, or anemia. Dry powder massages should not be performed if you have skin irritation or rashes.

Massages for elevated vata

Oil massage is one of the best and most effective treatments for vata. An oil massage with special vata oils or plain sesame oil is heating, reduces dryness, and provides nourishment and grounding. A full body massage followed by a steam treatment is best, but if time is an issue, regular partial oil massages also work very well. If you have a tendency toward vata imbalance, regular oil massage should be part of your routine.

To pacify vata, use these oils:
- plain sesame oil (heating).
- almond oil (warming and soothing).
- olive oil (heating).

Massages for elevated pitta

Oil massages with cooling or soothing oils like coconut or almond oil and special pitta oils pacify pitta. They provide grounding and calm, which counteracts pitta’s lightness and sharpness. Pitta’s highly active intellect gets a well-deserved rest with this full body sensory experience.

To pacify pitta, use these oils:
- coconut oil (cooling).
- almond oil (warming and soothing).

Preparing a dry powder massage

Mix together the following ingredients to prepare the powder for a massage.

- 3 cups chickpea flour
- 2 tbsp dried basil
- 2 tbsp dried sage
- 1 tbsp neem powder (optional)
- 1 tbsp shallaki powder (optional)
- 1 tbsp Amalaki or Triphala powder (optional)
- 2 tbsp finely ground rock salt

After a massage

Wipe off as much of the oil as you can with tissues immediately. Then remove the rest with soap or take a shower. Avoid exposure to the cold and wind, and take time to rest.

"Oil massage slows aging, removes fatigue and body aches, provides sound sleep and body strength, and prolongs life."

SWAMI SIVANANDA

Massages when agni is weak

As it is difficult for the skin to digest oil when agni is weak, one must make careful considerations when performing a massage in these circumstances. Massages using dry powder, silk gloves, or specific oils can help stimulate agni in the skin.

Oils that stimulate agni in the skin are:
- mustard seed oil (very heating, do not use for the whole body, but just specific parts at a time)
- Special, medicated, ayurvedic sesame oils (heating).
Preparing a dry powder massage

Mix together the following ingredients to prepare the powder for a massage.

- 3 cups chickpea flour
- 2 tbsp dried basil
- 2 tbsp dried sage
- 1 tbsp neem powder (optional)
- 1 tbsp shallaki powder (optional)
- 1 tbsp Amalaki or Triphala powder (optional)
- 2 tbsp finely ground rock salt

“Aoil massage slows aging, removes fatigue and body aches, provides sound sleep and body strength, and prolongs life.”

SWAMI SIVANANDA

After a massage

Wipe off as much of the oil as you can with tissues immediately. Then remove the rest with soap or take a shower. Avoid exposure to the cold and wind, and take time to rest.
WORKING TOWARD A HEALTHIER LIFESTYLE

If healthy living is new to you, then start here, using this three-step guide to work toward a full Ayurvedic lifestyle. Remember, regularity and moderation are key, and it is best to introduce changes slowly so that they last.

The start of your day

Try to get up 30 minutes earlier than usual. Then add one or two of the hygiene practices below to your morning routine.

- **Massage the top** of your head and then your feet with oil (see pp.36–39), and then shower.
- **Clear your** nasal passage and then clean your tongue (see pp.34–35).
- **Have a glass** of hot water before breakfast.

Food and mealtimes

Mealtimes are one of the most important aspects of an Ayurvedic lifestyle. Choose one of the suggestions below.

**BREAKFAST**
- **Try eating** a simple breakfast (especially if you aren’t in the habit of eating breakfast). Find inspiration on pp.90–95.

**LUNCH**
- **Have a warm** meal and take your time while eating.

**DINNER**
- **Replace salads** and raw foods with a warm, cooked meal.

Yoga and meditation

Performing a complete yoga and meditation session every day can feel like a big commitment. Start by doing the following.

- **Do a complete** yoga session once a week (see pp.120–63).
- **Do 5 minutes** of meditation every day (see pp.176–77).

Pick one of these things to introduce into your daily life.

- **Do 5 minutes** of abdominal breathing and body awareness each day (see pp.124–25).
- **Do 5 minutes** of positive thinking each day (see pp.172–73). Use the affirmation, “My heart is filled with compassion towards all beings.”
WORKING TOWARD HEALTH

Don’t try to change every aspect of your lifestyle at once. Use this advice to build up healthy practices:

• Start with one or two aspects, perhaps those you are most motivated to change.
• Don’t try to change anything that clashes with your duties at home or at work.
• Make a plan and note your progress. If you miss a goal, just go back to the previous step.

Physical exercise

If regular exercise is new to you, use the following steps to build it into your daily and weekly routines.

• **Start slowly**, with 10 minutes a day, and add 1 minute each day.
• **Exercising in** the morning is best, but more important is being able to exercise at the same time each day.
• **If you miss** a day, just pick it up the next day – don’t allow frustration to build.
• **See pp.50–55** to find out which form of exercise is best-suited to your constitution.

The end of your day

Sleep is often neglected in a modern lifestyle. Try to do the following things each night to get a more restful night’s sleep.

• **Go to bed** 30 minutes earlier than usual.
• **Avoid using** your computer, television, or phone for at least 15 minutes before going to bed. Use this time for a period of quiet contemplation.
• **See p.33** to find out the best way for someone of your constitution to get a good night’s sleep.

ADVICE FOR VATA

Those of a vata nature should try to:

• **Drink fewer** caffeinated drinks—try switching to green tea, which has a lot less caffeine.
• **Avoid eating** salads and raw food in the evening—try a warm soup instead.

ADVICE FOR PITTA

Those of pitta nature should try to:

• **Have a** late-afternoon snack of fresh sweet fruit every day.
• **Take 15 minutes** each day to cool down using active relaxation (see pp.160–61).

ADVICE FOR KAPHA

Those of a kapha nature should try to:

• **Do a** little extra exercise, such as taking the stairs instead of getting on the elevator.
• **Eat less** at night and start the day with an agni drink (see p.85).
ACHIEVING A HEALTHIER LIFESTYLE

You have already started to change your lifestyle and experienced the benefits, so here is how you can improve on your progress and stay motivated. Try to continue to add new practices and habits at the same pace.

The start of your day

Try to get up around 6 a.m. by setting your alarm 10 minutes earlier every two weeks. Gradually add the practices below to your morning routine.

- **Practice positive** thinking—wake up with a feeling of gratefulness toward all life (see pp.172–73).
- **Practice nasya** and oil pulling (see pp.34–35).
- **Perform a** self-massage once a week before you take a shower (see pp.36–39).
- **Drink one** or two glasses of hot water to have a bowel movement. (See pp.208–09 for home remedies that support bowel function.)

Food and mealtimes

Buy some basic spices (see pp.68–69) and eat one meal a day at the same time. You may want to work toward vegetarianism to increase sattva (see pp.64–67).

**BREAKFAST**
- **Adapt your breakfast** to your dominant dosha(s) (pp.90–95).

**LUNCH**
- **Prepare a simple** lunch, such as stir-fried vegetables (p.104), in the morning, and bring it to work in an insulated lunch box.

**DINNER**
- **Eat a light**, soupy, easily digestible meal at 6 p.m. each evening (see pp.106–13).

Yoga and meditation

Practice neck exercises (pp.130–31) at work to take a break from the computer. Start doing yoga and meditation over the weekend, then introduce weekday sessions, too.

- **10–30 minutes** of pranayama and asanas (see pp.122–59).
- **10 minutes** of meditation (see pp.176–77).

EASY CHANGES

These easy changes will have a noticeable effect on your health, providing added motivation for you to continue more challenging lifestyle practices.

- Avoid sugary snacks one day a week.
- Replace sweets with fresh or dried fruit.
- Only drink hot or warm Ayurvedic water during the day (see p.85).
EASY CHANGES
These easy changes will have a noticeable effect on your health, providing added motivation for you to continue more challenging lifestyle practices.

- Avoid sugary snacks one day a week.
- Replace sweets with fresh or dried fruit.
- Only drink hot or warm Ayurvedic water during the day (see p.85).

ADVICE FOR VATA
Those of a vata nature should try to:
- Perform a self-massage with soothing oils—try to give yourself two massages a week.
- Introduce regularity by eating your meals at the same time every day.

ADVICE FOR PITTA
Those of a pitta nature should try to:
- Drink fewer alcoholic drinks and reduce the amount of fried or spicy food you eat.
- Perform alternate nostril breathing every day (see pp.126–27).

ADVICE FOR KAPHA
Those of a kapha nature should try to:
- Perform a self-massage using kapha oils or herbal powder once a week (see pp.36–39).
- Skip either breakfast or dinner once a week if you are able to or aren’t hungry.

Physical exercise and activity
Doing regular exercise is the best way to build it into your routine. You may want to try out different types of exercise to see what you enjoy doing most.

- If daily practice is not possible, establish an exercise routine of 2–3 times a week.
- Try to do a form of exercise that suits your dominant dosha(s) (see pp.50–55).

The end of your day
Try to go to sleep at 10 p.m. or earlier by going to bed 30 minutes earlier each month. Then gradually build the following practices into your routine.

- Finish any work you need to do (both mentally and physically) an hour before going to bed, and reduce the presence of electronic devices from the room in which you sleep.
- Do 5 minutes of meditation (see pp.176–77) and yogic breathing exercises (see pp.124–27) before bed.

EASY CHANGES
These easy changes will have a noticeable effect on your health, providing added motivation for you to continue more challenging lifestyle practices.

- Avoid sugary snacks one day a week.
- Replace sweets with fresh or dried fruit.
- Only drink hot or warm Ayurvedic water during the day (see p.85).

ADVICE FOR VATA
Those of a vata nature should try to:
- Perform a self-massage with soothing oils—try to give yourself two massages a week.
- Introduce regularity by eating your meals at the same time every day.

ADVICE FOR PITTA
Those of a pitta nature should try to:
- Drink fewer alcoholic drinks and reduce the amount of fried or spicy food you eat.
- Perform alternate nostril breathing every day (see pp.126–27).

ADVICE FOR KAPHA
Those of a kapha nature should try to:
- Perform a self-massage using kapha oils or herbal powder once a week (see pp.36–39).
- Skip either breakfast or dinner once a week if you are able to or aren’t hungry.

Physical exercise and activity
Doing regular exercise is the best way to build it into your routine. You may want to try out different types of exercise to see what you enjoy doing most.

- If daily practice is not possible, establish an exercise routine of 2–3 times a week.
- Try to do a form of exercise that suits your dominant dosha(s) (see pp.50–55).

The end of your day
Try to go to sleep at 10 p.m. or earlier by going to bed 30 minutes earlier each month. Then gradually build the following practices into your routine.

- Finish any work you need to do (both mentally and physically) an hour before going to bed, and reduce the presence of electronic devices from the room in which you sleep.
- Do 5 minutes of meditation (see pp.176–77) and yogic breathing exercises (see pp.124–27) before bed.

EASY CHANGES
These easy changes will have a noticeable effect on your health, providing added motivation for you to continue more challenging lifestyle practices.

- Avoid sugary snacks one day a week.
- Replace sweets with fresh or dried fruit.
- Only drink hot or warm Ayurvedic water during the day (see p.85).

ADVICE FOR VATA
Those of a vata nature should try to:
- Perform a self-massage with soothing oils—try to give yourself two massages a week.
- Introduce regularity by eating your meals at the same time every day.

ADVICE FOR PITTA
Those of a pitta nature should try to:
- Drink fewer alcoholic drinks and reduce the amount of fried or spicy food you eat.
- Perform alternate nostril breathing every day (see pp.126–27).

ADVICE FOR KAPHA
Those of a kapha nature should try to:
- Perform a self-massage using kapha oils or herbal powder once a week (see pp.36–39).
- Skip either breakfast or dinner once a week if you are able to or aren’t hungry.
### EXPANDING YOUR HEALTHY LIFESTYLE

Now that you have established a routine, you are ready to focus on how you can maintain it. You can also enhance your health and well-being further by diving deeper into what Ayurevda and yoga have to offer.

#### The start of your day

Get up at around 5:30 a.m. every day. Then, gradually add the following practices to your routine:

- **Do 30 minutes** of yoga and meditation each morning.
- **Give yourself** at least one self-massage each week (see pp.36–39).
- **Implement as much** of the hygiene routine on pp.34–35 as you are able to.

#### Food and mealtimes

Gradually build up the following practices until all of them become part of your lifestyle:

- **Eat your meals** at the same times each day.
- **Adapt your** meals to the seasons.
- **If inspired to**, try becoming a full vegetarian (see pp.64–67).
- **Identify which diet** suits the doshas in your body and follow it if your dosha(s) are upset.
- **Start using** the spices that are best suited to your constitution and your palate.
- **Introduce** fasting on one day each week (see pp.86–87) if you are pitta or kapha, or half a day each week if you are vata.

#### Yoga and meditation

Do 1 hour of yoga and meditation each day. This is best split into two 30-minute sessions — one in the morning, and another in the afternoon or evening.

- **Include both** breathing and relaxation exercises in your yoga sessions.
- **Go to a yoga class** at least once a week to benefit from the group energy and stay inspired.
- **Try going to a yoga retreat** once a year to fully recharge both physically and mentally. This will also give you motivation to stick with and deepen your practice.

#### Yoga and meditation

### Advice for Vata

Those of a vata nature should try to:

- Eat warm meals.
- Try to have regular bowel movements.
- Perform regular oil massages (see pp.36–39).

### Advice for Pitta

Those of a pitta nature should try to:

- Eat ghee and milk.
- Soothe their eyes with rosewater or castor oil (see pp.34–35).
- Be tolerant to themselves and others.

### Advice for Kapha

Those of a kapha nature should try to:

- Limit their intake of fatty and heavy foods.
- Fast and exercise on a regular basis.
- Boost their metabolism with a dry powder or kapha oil massage (see pp.36–39).

### Ayurvedic treatments

Always monitor the health of your agni and doshas (see pp.48–49). Try some of these practices:

- Use basic home remedies, such as only drinking Ayurvedic water (see p.85).
- During the winter, practice nasya up to three times a day (see pp.34–35).
- If pitta and kapha are strong in your constitution, do a long fast in the spring—for 2 days or up to a week (see pp.86–87).
- Go to an Ayurvedic doctor for a panchakarma treatment, ideally during spring or fall (see pp.194–95).
“If you entertain healthy thoughts, you can keep good health.”

SWAMI SIVANANDA

ADVICE FOR VATA
Those of a vata nature should try to:
- Eat warm meals.
- Try to have regular bowel movements.
- Perform regular oil massages (see pp.36–39).

ADVICE FOR PITTA
Those of a pitta nature should try to:
- Eat ghee and milk.
- Soothe their eyes with rosewater or castor oil (see pp.34–35).
- Be tolerant to themselves and others.

ADVICE FOR KAPHA
Those of a kapha nature should try to:
- Limit their intake of fatty and heavy foods.
- Fast and exercise on a regular basis.
- Boost their metabolism with a dry powder or kapha oil massage (see pp.36–39).

The end of your day
You should now be going to bed by 10 p.m. each night. You could also try some of these suggestions.
- Ban any computer or phone screens from the room in which you sleep.
- End each day with enough time for soothing practices, such as quiet contemplation, meditation (see pp.180–81), or yogic breathing (see p.124–25).
- Stop working at least an hour before going to bed as often as you are able to.

Ayurvedic treatments
Always monitor the health of your agni and doshas (see pp.48–49). Try some of these practices:
- Use basic home remedies, such as only drinking Ayurvedic water (see p.85).
- During the winter, practice nasya up to three times a day (see pp.34–35).
- If pitta and kapha are strong in your constitution, do a long fast in the spring – for 2 days or up to a week (see pp.86–87).
- Go to an Ayurvedic doctor for a panchakarma treatment, ideally during spring or fall (see pp.194–95).
GOOD HEALTH

“Develop an inquisitive outlook toward the less obvious signs of ill health so as to keep from getting ill.”

SWAMI SIVANANDA
MAINTAINING GOOD HEALTH

“Develop an inquisitive outlook toward the less obvious signs of ill health so as to keep from getting ill.”

SWAMI SIVANANDA
How to Recognize Problems

Disease starts to occur when the doshas are out of balance and/or agni is becoming weak. These boxes show symptoms that will help you recognize imbalances, and the following pages give advice on how to address these problems before more serious issues develop.

Elevated Vata
These symptoms can be signs that vata is starting to become irritated within the body and mind.

Mental
- Lack of concentration.
- Sleeplessness.
- Sensitivity (such as to noise and touch).
- Exhaustion.

Physical
- Strong intolerance to cold.
- Restlessness and inability to sit still.
- Muscular tension.
- Constipation, gas, or runny bowel movements.
- Cravings for sweet, salty, or sour food.
- Stiffness or pain in the joints.
- Susceptibility to common illnesses, such as colds or UTIs.

For information on lifestyle choices that you can make in order to treat elevated vata, move on to Pacifying vata, pp.50–51.

Elevated Pitta
These symptoms can be signs that pitta is starting to become irritated within the body and mind.

Mental
- Irritation or a short temper.
- Prone to judge others and themselves.
- Overly competitive behavior.

Physical
- Strong intolerance for heat.
- Burning sensations (especially in the eyes).
- A frequently red and flushed face.
- Sensitivity to bright light.
- Excessive thirst or hunger.
- Loose and frequent bowel movements.
- Increased sweating.
- Skin irritations.
- Cravings for sweet and cold food and drink.
- Heart burn or sour eructation.

For information on lifestyle choices that you can make in order to treat elevated pitta, move on to Pacifying pitta, pp.52–53.

Responding to the Body

The state of the body is in constant flux, with the strength of the doshas and the strength of agni always changing. It is helpful to develop an awareness of your body so that dosha imbalance and agni weakness can be noticed and addressed. Vata is the most easily elevated dosha due to its changing nature; it is also the quickest to rebalance. Pitta is more stable than vata, while kapha has the most stability—once kapha is increased, it requires effort to bring it back into balance. The doshas that are most susceptible to imbalance for you will be those that are strongest in your constitution, or most influenced by your lifestyle (e.g. kapha in a sedentary lifestyle), the season (e.g. pitta in summer), or phase of your life (e.g. vata in old age).

Elevated Kapha
These symptoms can be signs that kapha is becoming irritated within the body and mind.

Mental
- A lack of inner drive and mental clarity.
- Strong attachment to things.

Physical
- Excessively cold skin.
- Loss of appetite and hunger.
- Reduced sense of taste and smell.
- Weight gain.
- Feeling of heaviness and sluggishness.
- Fatigue and lethargy.
- Difficulty becoming active.
- Oily scalp and dandruff.
- Increased and more viscous bodily secretions.
- Sinusitis or blocked sinuses.
- Susceptibility to colds with productive cough.

For information on lifestyle choices that you can make in order to treat elevated kapha, move on to Pacifying kapha, pp.54–55.

Weak Agni
These symptoms can be signs that your agni is weak and needs to be strengthened.

Physical
- Indigestion.
- Fullness, heaviness, or bloating after a meal.
- Fatigue after a normal meal.
- Newly developed food intolerances.
- Reflux, heartburn, or gastritis.
- Undigested material in your stool.

For information on lifestyle choices that you can make in order to treat a weak agni, move on to Strengthening agni, pp.56–57.
Responding to the body

The state of the body is in constant flux, with the strength of the doshas and the strength of agni always changing. It is helpful to develop an awareness of your body so that dosha imbalance and agni weakness can be noticed and addressed. Vata is the most easily elevated dosha due to its changing nature; it is also the quickest to rebalance. Pitta is more stable than vata, while kapha has the most stability – once kapha is increased, it requires effort to bring it back into balance. The doshas that are most susceptible to imbalance for you will be those that are strongest in your constitution, or most influenced by your lifestyle (e.g. kapha in a sedentary lifestyle), the season (e.g. pitta in summer), or phase of your life (e.g. vata in old age).

**ELEVATED KAPHA**

These symptoms can be signs that kapha is becoming irritated within the body and mind.

**MENTAL**
- A lack of inner drive and mental clarity.
- Strong attachment to things.

**PHYSICAL**
- Excessively cold skin.
- Loss of appetite and hunger.
- Reduced sense of taste and smell.
- Weight gain.
- Feeling of heaviness and sluggishness.
- Fatigue and lethargy.
- Difficulty becoming active.
- Oily scalp and dandruff.
- Increased and more viscous bodily secretions.
- Sinusitis or blocked sinuses.
- Susceptibility to colds with productive cough.

For information on lifestyle choices that you can make in order to treat elevated kapha, move on to Pacifying kapha, pp.54–55.

**WEAK AGNI**

These symptoms can be signs that your agni is weak and needs to be strengthened.

**PHYSICAL**
- Indigestion.
- Fullness, heaviness, or bloating after a meal.
- Fatigue after a normal meal.
- Newly developed food intolerances.
- Reflux, heartburn, or gastritis.
- Undigested material in your stool.

For information on lifestyle choices that you can make in order to treat a weak agni, move on to Strengthening agni, pp.56–57.
PACIFYING VATA

Vata is irregular, moving, light, dry, cool, fine, quick, and rough. It is pacified by practices that are regular, stable, heavy, oily, heating, viscous, slow, and smooth, as these characteristics are opposite to its own.

Lifestyle

Regularity is the key for pacifying vata. Those with a lot of vata have a tendency to become irregular in their movement and bodily rhythms, so try to keep to a fixed routine of eating, working, and sleeping.

WHAT TO DO
- Maintain a fixed daily routine.
- Relax regularly.
- Go on countryside walks in the sunshine.
- Spend time in quiet contemplation.
- Listen to calming music.
- Take warm baths.

WHAT NOT TO DO
- Get too stressed.
- Eat at irregular times.
- Consume caffeine.
- Talk too much.
- Sleep too little.
- Exercise too regularly.
- Become exposed to drafts and cold.
- Activities that cause sensory overload.

MASSAGE
Oil massage with heating oils is one of the best and most effective lifestyle practices to pacify elevated vata. If you have a tendency toward vata imbalance, you should make oil massages a regular part of your routine. For more information about how to perform a self-massage and which oils to use for elevated vata, see pp.36–39.

EXERCISE
Grounding or strength-building exercise and any sport with slow, directed movements pacify vata. Weightlifting is particularly good, as it provides stability and substance to counteract vata’s lightness and mobility. Those with a lot of vata in their constitution should be careful to avoid overexertion.
Those wishing to pacify vata benefit from a regular diet of warm, soupy food, and only consuming drinks hot. A diet to pacify vata contains more fats and grains than diets for other doshas. For more information about a vata diet, see pp.72–75.

You may wish to go to an Ayurvedic practitioner. They will assess you first, and may then recommend oil treatments, such as a full body massage or enemas to pacify vata (see pp.192–93), or a full panchakarma treatment to eliminate elevated vata (see pp.194–95).

“Vata in harmony is enthusiasm, normal breathing and movement, and the proper elimination of malas.”

CHARAKA
PACIFYING PITTA

Pitta is hot, liquid, sharp, light, quickly penetrating, sour, and slightly oily. It is pacified by practices that are cooling, soothing, heavy, slightly drying, and mild as these characteristics are opposite to its own.

Lifestyle

Those with a lot of pitta tend toward intensity both in their emotions and activities. They benefit from a mild and moderate work and personal life. They should partake in soothing hobbies and avoid activities that might provoke strong emotions.

WHAT TO DO
- Oil massages with cooling oils.
- Go swimming.
- Go on walks in the woods or in the shade, avoiding the sun.
- Take cool baths.
- Listen to calming music.

WHAT NOT TO DO
- Sunbathe or stay in the sun too long.
- Get stressed.
- Use saunas and steam rooms.
- Give in to strong anger or irritation.
- Engage in competitive activities.

MASSAGE
Pitta is pacified by cooling or soothing oils, such as coconut or almond oil, which counteract its heat and sharpness. For more information about how to perform a self-massage and which oils to use for elevated pitta, see pp.36–39.

EXERCISE
Swimming and outdoor exercises in the shade are the best forms of exercise for pitta. Those with a lot of pitta will benefit from noncompetitive sports, reigning in their competitiveness and focusing on enjoying the exercise.
“Pitta in harmony has good vision and digestion, a normal temperature and hunger, and is happy and intelligent.”

CHARAKA
PACIFYING KAPHA

Kapha is cool, heavy, oily, stable, and soft. It is pacified by practices that are heating, light, dry, moving, and rough as these characteristics are opposite to its own.

Lifestyle

Those looking to pacify kapha should find ways that they can challenge themselves, be active, and change their routines every now and then. Stimulation is the key to counterbalance inertia and stability, which can eventually become rigidity.

WHAT TO DO
- **Dry-powder** or oil massages.
- **Take warm** baths.
- **Listen to** lively music.
- **Learn** new things.
- **deviate** from your routine.
- **Seek out** stimulating company.

WHAT NOT TO DO
- **Be too** sedentary.
- **Sleep too** much.
- **Gain too** much weight.
- **Be exposed to** cold.
- **Live a** secluded lifestyle.

MASSAGE
- **Heating or stimulating massages**, such as those using dry powder, silk gloves, or heating oils, pacify kapha. For more information about how to perform a self-massage and which oils to use for elevated kapha, see pp.36–39.

EXERCISE
- **Exercise is** important for those with strong kapha as it stimulates their slower metabolism. Most benefit comes from the speed, activity, and competition provided by group sports. Dancing is also good as its lightness and movement balance kapha’s heaviness and stability.

Diet
To pacify kapha, try to avoid overeating, or eating food that is too heavy. You might want to skip the occasional meal, fast regularly, and generally eat less. It is best to stick to warm meals and avoid heavy, greasy foods, or eating too many grains. For more information about a kapha diet, see pp.80–81.

Practitioner treatments
You may wish to go to an Ayurvedic practitioner. They will assess you first, and may then recommend treatments such as herbal bolus or dry-powder massage to pacify kapha (see pp.192–93), or a panchakarma treatment to eliminate elevated kapha (see pp.194–95).

Yoga and meditation
The tendency for lethargy and inertia caused by kapha is eased by yoga's stimulation of prana (vital energy). The resulting sense of lightness and clarity is strengthened during meditation. For more information, see chapter 5 on yoga (p.118) and chapter 6 on meditation (p.164).
“Kapha in harmony is oily, cohesive, steady, virile, strong, self-disciplined, patient, and without greed.”

CHARAKA

Diet

To pacify kapha, try to avoid overeating, or eating food that is too heavy. You might want to skip the occasional meal, fast regularly, and generally eat less. It is best to stick to warm meals and avoid heavy, greasy foods, or eating too many grains. For more information about a kapha diet, see pp.80–81.

Yoga and meditation

The tendency for lethargy and inertia caused by kapha is eased by yoga’s stimulation of prana (vital energy). The resulting sense of lightness and clarity is strengthened during meditation. For more information, see chapter 5 on yoga (p.118) and chapter 6 on meditation (p.164).

Practitioner treatments

STRENGTHENING AGNI

Maintaining agni is one of the key principles of Ayurveda, and looking after our agni may now be one of our most important tasks, as it is weakened by most aspects of a modern lifestyle.

Lifestyle

Ayurveda teaches us how to keep agni strong and healthy, and how to restore its function if compromised. This revolves around what, how, and when we eat, as well as how regularly we exercise.

WHAT TO DO
- **Eat at the** same times each day.
- **Eat a light** and easily digestible diet of fresh, non-processed food.
- **Fast regularly** according to your health and dosha.
- **Drink hot** or warm water.
- **Exercise regularly.**

WHAT NOT TO DO
- **Overload your** stomach.
- **Eat when** you are not hungry.
- **Have cold** drinks.
- **Become stressed**, or eat a heavy diet during periods of stress.
- **Have too** sedentary a lifestyle.

MASSAGE

The agni in the tissues needs to be strong in order for massage oil to be digested. A full oil self-massage can be too much too digest if your agni is weak. Stimulating oils, or dry-powder or silk glove massages are a good alternative (see pp.36–39).

EXERCISE

Exercise stimulates and strengthens agni and the entire digestive process. Try to exercise every day, or at least two to three times a week.
**Diet**

_Those wishing to strengthen agni_ benefit from using plenty of spices in their food and fasting 1 day a week (see pp.86–87). Avoid eating too much, or foods that are too heavy. For more information about how to eat for strengthening agni, see pp.84–85.

**Yoga**

_Most yoga asanas_ have an agni-strengthening effect. A full yoga session will stimulate your metabolism and the agni in your digestive system, ensuring that you are ready to fully digest your meals. For more information, see chapter 6 on yoga (p.118).

**Practitioner treatments**

As well as the lifestyle and diet advice essential for strengthening agni, an Ayurvedic practitioner may recommend a course of therapeutic, agni-strengthening herbs, most of which also digest ama (see pp.196–97).

_“The secret of being healthy and happy at all times is to be a little hungry all the time.”_  

SWAMI SIVANANDA
“Let your diet be anything, but it should pass this test: it should protect health and prevent disease.”

CHARAKA
FOOD, DIET, AND RECIPES

“Let your diet be anything, but it should pass this test: it should protect health and prevent disease.”

CHARAKA
THE HEALING POWER OF FOOD

Nutrition is called “the great medicine” in Ayurveda. A wholesome, well-balanced diet is the foundation of health, strength, and happiness, for both mind and body.

A healthy diet

The food you eat should be appetizing and appeal to all your senses. Make gradual changes to your diet by cutting down on unwholesome foods and introducing healthy ones in their place. With practice, you will find the diet best suited to your taste and constitution.

A well-balanced diet consists of two-thirds nourishing foods, which help build tissue, and one-third purifying foods, which prevent kapha increase and excess tissue buildup (see p.26).

- **Nourishing foods**: grains, fruit, milk, dairy products, nuts, fats, and starchy vegetables, such as potatoes.
- **Purifying foods**: legumes and all other vegetables except those that are rajasic or tamasic (see p.65).

Drinking and eating

A small glass of hot water or water at room temperature half an hour before a meal and during a meal is beneficial. More than that will weaken agni. After a meal, wait at least 1 hour before having a drink, so as not to weaken agni or increase kapha.

Follow the eight guiding principles to ensure the food you eat has the power of healing.

ORIGIN

Regional foods that are fresh and ripe, rather than imported foods, are the best choice (see pp.66–67).

TIMING

The season, the time of day, and your phase of life all tell you which foods are best to eat. In winter, meals should be rich and nourishing; in summer, light and cooling. Make lunch your biggest meal.

QUALITY

Food should be organic, fresh, and selected according to its taste, heating or cooling quality, digestibility, and effect on the doshas and tissues. Avoid processed and prepackaged foods and meals (see pp.66–67).

QUANTITY

Don’t eat too much or too little. Fill your stomach half with solid food, one quarter with liquids, and leave one quarter empty.
INCOMPATIBLE FOODS

Some foods become hard to digest if eaten in large amounts at the wrong time, or together with certain other foods. They weaken agni, disturb the doshas, create blockage, and damage the tissues. Only people with a very strong agni, or who are used to eating these foods, will be able to digest them.

Try to avoid:
- Milk with fruit, fish, yogurt, meat, tomatoes, or legumes
- Hot foods with cold foods
- Hot drinks with honey, alcohol, or yogurt
- Ghee and honey combined in equal quantities
- Cold foods in winter

"If you strive for bliss, your diet should be such that new disease cannot manifest and existing disease is alleviated."

CHARAKA
**SIX TASTES**

In Ayurveda, every food or substance has at least one of the six tastes: sweet, sour, salty, pungent, bitter, and astringent. To properly satisfy the body and mind, a full meal should include all six tastes.

**Effect on doshas**

The six tastes all have different qualities, such as cooling or oily. Each taste has an effect on the doshas, because they come from the same elements as the doshas and share the same qualities. A taste that has the same quality as a dosha will increase it. To pacify a dosha that is elevated in your constitution, emphasize tastes with the opposite qualities in your meal.

**Three phases of digestion**

An ayurvedic meal starts with the sweet kapha phase, when the elements water and earth are digested. Ideally, foods with a sweet taste (such as grains, and also dessert) should be eaten first, as they need a strong agni. This may be new to the Western palate, but it is well worth a try.

Then comes the sour pitta phase, which digests the element fire. Eat sour and salty foods next. These support agni.

Finally, there is the vata phase, which digests air and ether. Consume bitter and astringent foods last. These support the vata phase and reduce kapha.
Astringent foods include: pears, legumes, tofu, and beans. The main meal should include legumes or tofu to be complete.

Pungent foods include: black pepper, ginger, tulsi, cardamom, radish, chile.

Bitter foods include: turmeric, fenugreek, leafy green vegetables, eggplant, and fresh herbs. Sprinkling chopped green herbs on a dish provides the bitter taste.

The tastes sour and pungent stimulate agni; the tastes bitter and astringent reduce tissue.

Vata is made from ether and air. Sweet, sour, salty tastes pacify vata. Pungent, bitter, astringent tastes increase vata.

Pitta is made from fire and water. Sweet, bitter, astringent tastes pacify pitta. Pungent, salty, sour tastes increase pitta.

Kapha is made from earth and water. Pungent, bitter, astringent tastes pacify kapha. Sweet, sour, salty tastes increase kapha.
SATTVIC DIET

Sattva is the energy of harmony and clarity. A sattvic diet helps create happiness of mind and is made up of pure foods that are delicious, wholesome, and give mental strength.

Energy and joy

Sattva is one of the three energies of the mind, or gunas (see pp.166–67). A sattvic diet consists of pure foods that give health, energy, joy, peace, and clarity. Our mind and body are strongly influenced by what we eat and drink. As you start to follow a sattvic diet, the positive experience of sattva will lead you to want to refine your tastes and food choices further.

A sattvic meal is prepared from fresh, natural ingredients. It is eaten freshly cooked and in moderate amounts, sitting down, and taking your time. It is easy to digest and leaves you feeling light and energized.

The guidelines opposite are designed to help you make conscious decisions about your diet. Remember that changes should be made gradually, but consistently.

“\textit{The foods that increase purity, strength, health, and joy are sattvic.}”

BHAGAVAD GĪTĀ

SATTVIC FOODS

Try to include as many of the following in your diet as possible:

- **Whole grains**, such as barley, millet, wheat, oats, brown rice, and quinoa
- **Fresh vegetables** – green leafy vegetables and seeded vegetables such as cucumber and squash
- **Ripe, fresh fruits**, such as pears, apples, plums, peaches, apricots, mangos, figs, and avocados
- **Nuts, seeds, and legumes**, such as moong dal, lentils, chana dal, chickpeas, cashews, almonds, sunflower seeds, pumpkin seeds
- **Dairy products** – organic, fresh milk, ghee, fresh cheese, curd, and yogurt from happy cows or goats
- **Spices** that are not too stimulating: coriander, pepper, turmeric, cumin, parsley, and rock salt in moderation
- **Natural sweeteners**, such as jaggery, honey, molasses, and maple or agave syrup.
HEALTHY SWAPS
To achieve a sattvic diet, try replacing the foods on the top line, in red, with their alternatives below, in green.

RAJASIC FOODS
Rajas is the energy of agitation (see p.167). Rajasic foods increase negative emotions, such as lust, anger, greed, selfishness, violence, and egoism. Rajasic foods are excessively pungent, bitter, sour, salty, dry, and burning. Tobacco is rajasic, and sattvic food eaten in a hurry becomes rajasic.

Try to avoid the following, which are rajasic:
- Unripe fruit
- Highly pungent spices, such as chile flakes, in excess
- Caffeine (in coffee, black and green tea, and soft drinks)
- Too many sweets
- Onions
- Garlic
- Radishes
- Hard cheese
- Eggs
- Refined (white) sugar
- Soft drinks
- Prepared mustards
- Heavily spiced and salted convenience foods
- Snacks with artificial additives
- Stimulants of all kinds

TAMASIC FOODS
Tamas is the energy of resistance (see p.167). Tamasic foods are stale, decomposed, or unclean and can make you dull, inert, lazy, and depressed. Meat, poultry, fish, and all intoxicants (such as alcohol and marijuana) are all tamasic in nature. Sattvic food taken in excessive quantity (overeating) becomes tamasic.

Try to avoid the following, which are tamasic:
- Overripe fruit
- Mushrooms
- Vinegar
- Peanuts
- Meat
- Poultry
- Fish
- Fermented foods
- Food that has been burned
- Fried or deep-fried foods
- Barbecued foods
- Reheated meals
- Canned food
- Processed food
- Precooked meals
- Leftovers
CONSIDER VEGETARIANISM

The yogic diet is based on sattvic foods, which means it is lacto-vegetarian. There are many benefits that come with eating only vegetarian food.

Why be a vegetarian?
Maintaining a happy and healthy mind and body relies on eating fresh, nourishing food. A well-balanced vegetarian diet consisting of grains, vegetables, fruit, herbs, milk, ghee, and vegetable oils provides all the nourishment required. Vegetarianism has a positive impact on both the health of the individual and the world (see right).

Choose wisely
Fresh, ripe foods are the best choices for a sattvic diet. Try to avoid canned food and frozen food. Meals should be freshly prepared, not processed.

Wherever possible, aim to:
- **Shop organic** — choose foods grown in fertile soil free from pesticides.
- **Shop local** — farmers’ markets and home-grown produce are ideal.
- **Avoid supermarket produce** that has been prepackaged and imported.

TO INCREASE SATTVA
To increase sattva (see pp.166–67) and enhance spiritual growth. Meat, poultry, fish, and eggs are considered rajasic and tamasic.

FOR NOURISHMENT
The farther away from the original source of energy—the sun—your food is, the less nourishing it is. Plant-based foods are lighter and easier to digest than meat, which is a burden on the digestive tract.

FOR GOOD HEALTH
According to scientific evidence, those with a balanced vegetarian diet have fewer chronic diseases—most notably, they have lower cholesterol, are less obese, and have a lower risk of heart disease.

“May you all attain perfect health, longevity, and peace by living on a vegetarian diet, which is helpful for meditation and healthy living.”

SWAMI SIVANANDA
“May you all attain perfect health, longevity, and peace by living on a vegetarian diet, which is helpful for meditation and healthy living.”

SWAMI SIVANANDA

THROUGH COMPASSION

Compassion, or nonviolence, toward all living beings is an important part of Ayurveda (see pp.174–75). This includes animals.

TO FEED THE WORLD

The growing human population is putting pressure on the planet’s resources. The earth can provide enough food for everyone – if we all eat a vegetarian diet.

TO PROTECT THE EARTH

A vegetarian diet reduces the negative environmental impact of meat production, such as greenhouse gas emissions, water wastage, and water pollution.

These are six reasons to consider changing to a vegetarian diet, which has both personal and global benefits.

MODERN FOOD PRODUCTION

Milk and butter contain the impressions of the animals they come from, such as the quality of their feed and their living conditions. Invest in the best you can afford.

High-quality products come from animals that enjoy the following living conditions:

- A natural habitat
- Space to move
- Good-quality feed
- Freedom to choose to eat those foods they need
- No hormone or antibiotic treatments
- Freedom from negative experiences, such as fear and stress.

GHEE, SUGAR, AND HONEY

In Ayurveda, food is medicine. As well as being everyday ingredients, ghee, sugar, and honey have powerful healing properties. Ghee and honey strengthen agni (digestive fire) when consumed in moderation.

Reaping the benefits

Sugar is the sweetener of choice in ayurvedic cuisine. Honey is regarded as medicine. Both substances should be consumed in moderation. The best forms of sugar to use are jaggery (unrefined cane sugar), which is available from some supermarkets, or sharkara (purified cane sugar), which can be found in specialty stores or online. Sharkara should not be confused with industrialized, refined white sugar, which has a similar appearance.

Ghee has a sweet taste. It rejuvenates the whole system and is a general tonic. If you are in good health, try to cook with ghee daily.

IMPORTANT NOTE

Avoid heating honey or taking it with hot substances, because when honey is heated it produces ama, which acts as a toxin (see p.26). Honey should not be consumed with an equal quantity of ghee, as this is also detrimental to health.

GHEE

_Ghee is clarified butter_, and is one of the best fats to use for cooking. It is made by heating butter until all the water has evaporated and then filtering the milk solids until only the fat remains. For therapeutic purposes, the older the ghee, the better its healing properties will be. It is said that ghee that is 100 years old can even reduce kapha.

**BENEFITS**

_Ghee has healing_ properties and improves mental function, the complexion, voice, eyes, and reproductive tissue. It is also used as a carrier for healing herbs, and is added to some herbal oils. Here are just a few examples of the medicinal uses of ghee:

- Soothing burns
- Aiding in wound healing
- As a brain tonic
- Purifying the blood and treating skin diseases
- Soothing and purifying the eyes

**QUALITIES**

- Heavy
- Soft
- Oily
- Cooling

**EFFECT ON THE DOSHAS**

Pacifies vata and pitta. Increases kapha.

SUGAR

Jaggery and sharkara are the two most commonly used forms of sugar in ayurvedic cuisine. Jaggery is thickened and solidified cane sugar syrup and contains many bioactive phytochemicals. It is available in lumps or as a powder. Sharkara is white sugar that has been carefully purified. Compared to refined white sugar (which is heating), sharkara is cooling, lighter, and easier to digest.

**BENEFITS**

Opt for older jaggery wherever possible, as it is easier to digest than fresh jaggery, which increases kapha and can lead to asthma.

Sharkara only mildly increases kapha. It has the following benefits:

- Diuretic
- Purifies the blood
- Soothes burning sensations
- Quenches thirst
- Beneficial for the eyes

**QUALITIES**

- Heavy
- Moisturizing
- Cold

HONEY

Honey’s astringent, subtle, and dry qualities make it the ideal substance for reducing kapha. The best variety is honeydew honey (also known as forest honey), which is penetrating and sharp. Those with a lot of pitta or vata should consume honey in moderation. As it is a desiccant, honeydew honey can reduce body weight in conjunction with a suitable diet for weight loss.

**BENEFITS**

Honey improves the skin, bones, nerves, eyes, heart, and voice and is an antimicrobial. It also has the following specific uses:

- Treating coughs and sore throats
- Treating burns (used externally)
- Helping wounds to heal (used externally)
- As a carrier for many herbal medicines to improve their absorption and enhance their effect
- Honey that is more than 1 year old reduces body fat (Fresh honey increases body weight.)

**QUALITIES**

- Cooling
- Astringent
- Subtle
- Dry
**SUGAR**

**Jaggery and sharkara** are the two most commonly used forms of sugar in ayurvedic cuisine. Jaggery is thickened and solidified cane sugar syrup and contains many bioactive phytochemicals. It is available in lumps or as a powder. Sharkara is white sugar that has been carefully purified. Compared to refined white sugar (which is heating), sharkara is cooling, lighter, and easier to digest.

**BENEFITS**

- **Opt for older jaggery** wherever possible, as it is easier to digest than fresh jaggery, which increases kapha and can lead to asthma.

- **Sharkara** only mildly increases kapha. It has the following benefits:
  - **Diuretic**
  - **Purifies** the blood
  - **Soothes burning** sensations
  - **Quenches** thirst
  - **Beneficial for** the eyes

**QUALITIES**

- **Heavy**
- **Moisturizing**
- **Cold**

**EFFECT ON THE DOSHAS**

Pacifies vata and pitta. Increases kapha.

---

**HONEY**

**Honey’s astringent, subtle, and dry** qualities make it the ideal substance for reducing kapha. The best variety is honeydew honey (also known as forest honey), which is penetrating and sharp. Those with a lot of pitta or vata should consume honey in moderation. As it is a desiccant, honeydew honey can reduce body weight in conjunction with a suitable diet for weight loss.

**BENEFITS**

- **Honey improves** the skin, bones, nerves, eyes, heart, and voice and is an antimicrobial. It also has the following specific uses:
  - **Treating coughs** and sore throats
  - **Treating burns** (used externally)
  - **Helping wounds** to heal (used externally)
  - **As a carrier** for many herbal medicines to improve their absorption and enhance their effect
  - **Honey that is more than** 1 year old reduces body fat (Fresh honey increases body weight.)

**QUALITIES**

- **Cooling**
- **Astringent**
- **Subtle**
- **Dry**

**EFFECT ON THE DOSHAS**

Increases vata and pitta. Pacifies kapha.
THE VATA DIET

A vata diet is suitable for anyone who needs to pacify and reduce vata, whether or not vata is one of the dominant doshas in their constitution. It is nourishing, tissue-building, and gives strength and vitality.

Understanding a vata diet

If vata is one of your dominant doshas and your doshas are in balance, you do not need to follow a special vata diet. You should aim to eat a balanced diet containing all six tastes.

Eating for vata

If you need to follow a special vata diet (see right), you will benefit from eating warm foods. Meals that are both warm and soupy and that contain high-quality fats are easily digested and drive out gas. A warm meal supports agni and a soupy, oily meal gives strength and nourishes the sense organs.

When to follow a vata diet

You should follow a vata diet if:
- You have elevated vata
- You feel your vata may become elevated as a result of your lifestyle, or because you have a lot of vata in your constitution
- In dry, windy, and cold weather
- During late fall and winter
- When you are in a region that aggravates vata, such as high-altitude mountains
- In old age, when vata is high

What and how to eat

The way you eat and how you prepare your food are important. Select foods with opposite qualities and tastes to cool, dry, irregular vata.

These are the most important aspects of the vata diet:
- Qualities: hot, liquid, oily, heavy
- Tastes: sweet, sour, salty
- Regular meals
- Eating in a calm and unhurried atmosphere
- Warm, cooked foods, preferably soups
- Drinking hot beverages only

Agni and vata

Elevated vata weakens agni. If you are following a vata diet, remember to take good care of agni. Follow the guidelines on pp.84–85, and try the following:
- One or two slices of fresh ginger with a pinch of rock salt and lemon juice before meals
- Curd or yogurt with a pinch of salt taken with your meal

Adapting your meals

Compared to the other doshas, vata benefits from a diet that includes increased amounts of the following tastes, textures, and qualities:
- Sweet tastes, in the form of carbohydrates
- Liquids, in the form of soupy foods and sauces
- Oiliness, from dairy products, and fats in the form of ghee or most vegetable oils (see p.75)
- Salty or sweet chutneys added to your meal

“Food should be taken in a calm and quiet place, free from anxiety and sorrow, observing silence.”

SWAMI SIVANANDA
What to avoid
If you are following a vata diet, you should reduce or avoid:

- **Qualities:** cold, dry, light
- **Tastes:** pungent, bitter, astringent
- **Fasting** — if you have a lot of vata in your constitution, you should not fast for longer than 16 hours; if you have elevated vata, you should not fast at all
- **Irregular meals**
- **Eating on the go**
- **Eating when under stress**
- **Raw, cold, and dry foods,** such as salad
- **Cold drinks**

Adapting your meals
Compared to the other doshas, vata benefits from a diet that includes increased amounts of the following tastes, textures, and qualities:

- **Sweet tastes,** in the form of carbohydrates
- **Liquids, in the form** of soupy foods and sauces
- **Oiliness, from** dairy products, and fats in the form of ghee or most vegetable oils (see p.75)
- **Salty or sweet** chutneys added to your meal

Agni and vata
Elevated vata weakens agni. If you are following a vata diet, remember to take good care of agni. Follow the guidelines on pp.84–85, and try the following:

- **One or two slices** of fresh ginger with a pinch of rock salt and lemon juice before meals
- **Curd or yogurt** with a pinch of salt taken with your meal

“Food should be taken in a calm and quiet place, free from anxiety and sorrow, observing silence.”

Swami Sivananda
FOODS FOR VATA

If it is appropriate for you to follow a vata diet (see pp.72–73), use these pages to discover the foods to choose and the foods to avoid.

Balancing vata

The pie chart (see right) shows the proportions of different foods to eat for a vata diet as part of your daily meals. Specific ingredients that are ideal for pacifying vata are given around the outside of the chart.

FOODS TO REDUCE OR AVOID

Soothe vata by reducing or avoiding:

- **Grains:** millet, brown rice, any whole grains, corn, barley, buckwheat, oat bran, cold cereals, puffed cereals, crackers, cereal flakes, rice flakes, puffed rice or corn cakes, popcorn
- **Vegetables:** all types of cabbage: kale, Brussels sprouts, kohlrabi, broccoli, cauliflower
- **Legumes:** chickpeas, aduki beans, white beans, black beans
- **Dairy products:** sheep’s milk cheese, buffalo mozzarella
- **Nuts and seeds:** bitter almonds
- **Spices and herbs:** chile flakes, cayenne pepper
- **Drinks:** cold or caffeinated beverages: coffee, black tea, green tea, and fruit or vegetable juice in cold weather
- **Fruit:** astringent fruit: pears, unripe bananas

Additional items

Add flavor to your meals with spices, herbs, sweeteners, and salt. Fresh fruit should be eaten outside of meal times. Take drinks before or during your meal, not immediately after (wait 1 hour).
FOODS FOR VATA

20% VEGETABLES

Vegetables
Fennel, cucumber, carrots, squash, okra, parsnips, beets, spinach, asparagus, sweet potatoes, zucchini, sweet peas, cooked and peeled tomatoes,* artichokes.*

15% FATS, DAIRY PRODUCTS, NUTS, SEEDS

Fats
Ghee, all cooking oils except for coconut oil.

Dairy products
Salted buttermilk, salted butter, fresh cheese, heated cow’s milk, mozzarella, sour and sweet cream, hard cheese.*

Nuts and seeds
Nuts roasted in ghee or soaked in water for 3 hours and peeled. Almonds, walnuts, hazelnuts, pumpkin seeds, sunflower seeds, sesame seeds.

Legumes
Mung beans, kidney beans, soy milk, red lentils,* soy products.*

10% LEGUMES

Foods that are marked with an asterisk will pacify the vata dosha if taken in small amounts—consume in moderation.

Additional items
Add flavor to your meals with spices, herbs, sweeteners, and salt. Fresh fruit should be eaten outside of meal times. Take drinks before or during your meal, not immediately after (wait 1 hour).

SPICES AND HERBS
These include: aniseed, basil, dill, fennel, ginger, cinnamon, cardamom, cumin, turmeric, bay leaves, cloves, sage, marjoram, rosemary.

SALT
The salty taste pacifies vata. Opt for local or Himalayan rock salt (rose-colored or white).

SWEETENERS
Small quantities of: raw cane sugar, fruit juice concentrate, molasses, honey*.

FRUIT
Sweet and/or sour fruit, for example: grapes, pineapple, apples, avocados, fresh dates, strawberries, figs, oranges, kiwis, limes.

DRINKS
Juices: apple, berry, mango, orange. Lemon juice with rock salt. Teas: fennel, chamomile, lemon balm.
THE PITTA DIET

A pitta diet is suitable for anyone who needs to pacify and reduce pitta, whether or not pitta is one of the dominant doshas in their constitution. It aims to purify the blood, and reduce heat and sourness in the body.

Understanding a pitta diet

If pitta is one of your dominant doshas and your doshas are in balance, you do not need to follow a special pitta diet. You should aim to eat a balanced diet containing all six tastes.

Eating for pitta

If you need to follow a special pitta diet (see right), you will benefit from eating plenty of vegetables, fruit, and carbohydrates; a good amount of protein; and not too much fat. Healthy pitta is the only one of the three doshas that benefits from raw foods, such as salad.

When to follow a pitta diet

You should follow a pitta diet if:

- **You have elevated pitta**
- **You feel your pitta** may become elevated as a result of your lifestyle, or because you have a lot of pitta in your constitution
- **During the summer** and early fall, and in hot and humid weather, when pitta is high
- **When you are** in regions that aggravate pitta, such as the tropics

What and how to eat

The way you eat and how you prepare your food is important. To pacify pitta, select foods with opposite qualities and tastes to hot, liquid, and light. Be careful, however, not to eat too many cold and heavy foods, which compromise agni. These are the most important aspects of the pitta diet:

- **Qualities:** dry, mild, warm or cool, slightly heavy
- **Tastes:** sweet, bitter, astringent
- **Regular meals**
- **Eating in a** friendly atmosphere
- **Plenty of** fruit and vegetables
- **Eating four small meals a day** or three meals a day and an afternoon snack of sweet fruit

"Do not eat when you are angry. Rest for a while until the mind becomes calm and then take your food."

SWAMI SIVANANDA
Adapting your meals

As part of your pitta diet, make simple changes to your meals that will help to pacify pitta. Try adding the following to your usual dishes:

- **Ghee** (in moderate quantities)
- **Fresh herbs** that are bitter and cooling, such as cilantro and mint
- **Green cardamom** in moderation – it is cooling but also pungent
- **Rosewater**, which is cooling
- **Coconut milk or oil**, which is cooling

What to avoid

If you are following a pitta diet you should reduce or avoid:

- **Qualities**: hot, light, oily
- **Tastes**: pungent, salty, sour
- **Fried food**
- **Foods that** are too hot
- **Hot or pungent** teas
- **Eating when** angry or irritated
- **Eating in** a hurry
- **Having heated** conversations during a meal
- **Skipping too** many meals

Agni and pitta

Even though pitta and agni share the element of fire, an elevated pitta does not necessarily mean a healthy digestive fire – in fact, often, the opposite.

If you have an irritated or elevated pitta, take care of agni with:

- **Bitter foods**
- **Physical exercise**
- **Herbs and spices** – cook with long pepper (pippali), cloves, cardamom, and mint

“Do not eat when you are angry. Rest for a while until the mind becomes calm and then take your food.”

FOODS FOR PITTA

Vegetables
Artichokes; eggplant (baked or grilled and peeled); green leafy vegetables; cauliflower; broccoli; cucumber; kohlrabi; all types of cabbage; peas; carrots; potatoes; squash; okra; green bell pepper; parsnips; beets; salad; celeriac; asparagus; sweet potatoes; cooked, peeled, and seedless tomatoes.*

Legumes
Pitta can eat all legumes. Eat soaked and cooked well with plenty of spices. Try: aduki beans, chickpeas, yellow and red lentils, soy products, mung beans, kidney beans.

Fats
Ghee is best. Oils: coconut, olive, canola, flaxseed, sunflower.

Dairy products
Buttermilk; unsalted butter; fresh cheese; watered-down cow’s milk mozzarella; sweet cream; unsalted soft goat cheese; mild, soft, low-fat cheese.

Nuts and seeds
Coconut, almonds soaked in water for 3 hours and peeled, sunflower seeds, coconut milk, almond milk.

Additional items
Add flavor to your meals with spices, herbs, sweeteners, and salt. Fresh fruit should be eaten outside of meal times. Take drinks before or during your meal, not immediately after (wait 1 hour).

SPICES AND HERBS
These include: basil, curry leaves, fenugreek, fennel, coriander, cardamom, cumin, turmeric, mint, peppermint, sage, long pepper, rosewater.

SALT
To pacify pitta, eat fewer salty foods. Opt for local or Himalayan rock salt (rose-colored or white).

SWEETENERS
Small quantities of: maple syrup, raw cane sugar, juice concentrate, molasses, fresh honey.

FRUIT
Sweet and cooling fruit, for example: red grapes, sweet apples, apricots, avocados, bananas, blueberries, pears, dates, figs, plums, raisins.

DRINKS
THE KAPHA DIET

A kapha diet is suitable for anyone who needs to pacify and reduce kapha, whether or not kapha is a dominant dosha in their constitution. It reduces excess tissue, opens blockages, and stimulates the metabolism.

Understanding a kapha diet

If kapha is one of your dominant doshas and your doshas are in balance, you do not need to follow a special kapha diet. You should aim to eat a balanced diet containing all six tastes.

Eating for kapha

If you need to follow a special kapha diet (see right), you should try to keep your food intake light. The way you eat is more important than what you eat. Any heavy substance becomes light when eaten in small amounts, and any light substance becomes heavy when consumed in large amounts. Fast, eat less, and skip meals (see pp.86–87).

When to follow a kapha diet

You should follow a kapha diet if:

- **You have elevated kapha**
- **You feel your** kapha may become elevated as a result of your lifestyle, or because you have a lot of kapha in your constitution
- **During spring,** and if agni is weak then also during the cold and wet season, when kapha is high
- **When you are** in regions that elevate kapha, such as regions that have long winters, lots of ice and snow, or lots of rain and cold

What and how to eat

The way you eat and how you prepare your food is important. Select foods with opposite qualities and tastes to cold, oily, heavy kapha. These are the most important aspects of the kapha diet:

- **Qualities:** hot, dry, light
- **Tastes:** pungent, bitter, astringent
- **Regular, warm meals** in good, lively company
- **Fasting or** reducing meals to two a day by skipping breakfast or dinner
- **Drinking hot** beverages only, and not drinking too much – a maximum of 6 cups per day
If you are following a kapha diet, you should reduce or avoid:

- All heavy, cold, and oily foods
- Cold and heavy drinks
- Tastes: sweet, sour, salty
- Milk and milk products
- Overeating
- Snacking
- Eating late at night
- Eating on your own

For kapha, a warm meal stimulates agni, tastes good, and is quickly digested. To keep agni strong, follow the guidelines on pp. 84–85 and also try the following:

- Bitter foods
- Physical exercise
- Cooking with ginger, black pepper, a bit of chile flakes, and plenty of bitter spices, such as curry leaves, turmeric, and fenugreek seeds or leaves
FOODS FOR KAPHA

If it is appropriate for you to follow a kapha diet (see pp.80–81), use these pages to discover the foods to choose and the foods to avoid.

Balancing kapha

The pie chart (see right) shows the proportions of different foods to eat for a kapha diet as part of your daily meals. Specific ingredients that are ideal for pacifying kapha are given around the outside of the chart.

FOODS TO REDUCE OR AVOID

Soothe kapha by reducing or avoiding:

- **Grains**: white flour, wheat
- **Vegetables**: avocados, cucumbers, pumpkin/squash, tomatoes, sweet potatoes
- **Legumes**: kapha can eat all legumes, as they are astringent
- **Dairy products**: all dairy products not listed opposite
- **Nuts and seeds**: all nuts and seeds not listed opposite
- **Spices and herbs**: kapha should reduce salt
- **Drinks**: cold drinks. Fruit juice needs to be watered down
- **Sweeteners**: white sugar
- **Fruit**: avocados, bananas, dates, fresh figs, honeydew melon, cherries, mangoes, watermelon, grapes

Grains

- Millet, corn, buckwheat, brown rice, rye, whole wheat, amaranth, barley, quinoa, puffed rice or corn cakes, cereal flakes, popcorn, bran, white rice,* spelt,* rolled oats,* corn.*
**Vegetables**
Artichokes; eggplant (baked or grilled and peeled); green leafy vegetables, such as spinach; green beans; cauliflower; broccoli; kale; leek; okra; bell peppers; spicy peppers; radishes; all types of cabbage; peas; potatoes; squash; okra; parsnips; beets; celeriac; asparagus.

**Legumes**
Eat soaked and cooked well with plenty of spices. Aduki beans, peas, chickpeas, yellow and red lentils, mung beans, kidney beans, soy milk,* soy beans,* tofu,* seitan.*

**Fats**
Olive oil, canola oil, mustard oil (a maximum of 2 tablespoons per day).

**Dairy products**
Buttermilk, cottage cheese, unsalted goat cheese with spices.*

**Nuts and seeds**
Pumpkin seeds,* sunflower seeds,* flaxseeds.*

**SWEETENERS**
Small quantities of: honeydew honey, maple syrup*, dried fruit*, cane sugar*.

**FRUIT**
Pineapple, astringent apples, grapefruit, orange, blueberries, pears, papaya, quince, rhubarb, dried fruit,* strawberries,* lemons.*

**DRINKS**
Teas: ginger, chai spices, green tea, fennel, rosehip, jasmine, chamomile, clove.

**SPICES AND HERBS**
These include: anise, fenugreek, cayenne, chile flakes, parsley, marjoram, nutmeg, mustard seeds, cilantro, and coriander.

**SALT**
Be moderate with your use of salt. Opt for small amounts of local or Himalayan rock salt (rose-coloured or white).

**Additional items**
Add flavor to your meals with spices, herbs, sweeteners, and salt. Fresh fruit should be eaten outside of meal times. Take drinks before or during your meal, not immediately after (wait 1 hour).

*Foods that are marked with an asterisk will pacify the kapha dosha if taken in small amounts—consume in moderation.*
SUPPORTING AGNI

Good digestion is the key to our health. If you know and follow the rules of keeping your agni (digestive fire) strong, you will be happy and healthy, and enjoy the benefits of a good immune system.

Support your digestion

Agni is a fire that needs adequate fuel. Eating heavy foods and overeating are like putting wet wood or too much wood on the fire – it will be extinguished. If your agni is strong, you will feel light, nourished, and clear after a meal, and have no fatigue, heaviness, fullness, or indigestion.

Eat in order

Heavy foods are harder to digest than light ones. Work with your digestion by eating different foods in the sequence below, which broadly corresponds with the order of the tastes (see p.62).
- **Heavy, oily, and hard** foods to start.
- **Soft** foods next.
- **Light and liquid** foods at the end of the meal.

Yogurt, curd, and cheese

Yogurt and curd should not be eaten for dinner or at night, as they will cause blockages. Hard cheeses are also heavy, oily, and cold and will have a similar effect.

Support your agni by tuning in to the natural rhythms of the day and the time of year, and working in harmony with them.
- **Agni is strongest** around noon and during winter; these are the times to eat heavier meals.
- **Agni is less active** in the morning and the evening, during summer, during illness, and immediately after exercise; these are the times to have light meals or fast (see p.86).

The day and the seasons

Support your agni by tuning in to the natural rhythms of the day and the time of year, and working in harmony with them.
- **Eat at** fixed times.
- **Eat only when** you are hungry.
- **Ensure meals are cooked** and eaten hot.
- **Make evening dinner** a light meal, and do not eat late.
- **Use plenty of spices.**
- **Consume** heavy, oily, fried, cold, and raw foods in small quantities only – they are hard to digest.
- **Fast one day** each week (see pp.86–87).
- **If you have fasted** for more than 8 hours between meals, don’t overload the stomach; this will tax your agni.
- **Do not drink cold water,** especially before, during, or after meals, and never add ice to your drinks.

Yogurt, curd, and cheese

Yogurt and curd should not be eaten for dinner or at night, as they will cause blockages. Hard cheeses are also heavy, oily, and cold and will have a similar effect.

Drinks

To support agni, try the following drinks in the place of cold water.

**AGNI DRINK**
- 1 tsp ground cumin
- ½ tsp freshly ground black pepper (for pitta, you can use long pepper)
- 2–3 pinches of ground ginger
- pinch of rock salt

Pour 1 cup of water into a saucepan. Add the spices and salt. Bring the seasoned water to a boil and simmer for 10 minutes. Pour into a cup and drink 30–45 minutes before your meal.

**AYURVEDIC WATER**

Boil water in an open saucepan for up to 20 minutes. Pour into a Thermos and drink throughout the day. Water boiled in this way is the most easily digestible form.

Agni and ojas

A strong agni will help to create ojas in the body (see pp.26–27).

When agni is strong, the following foods increase ojas:
- **Milk** – drink 1 cup a day, warmed with spices and consumed hot
- **Ghee** – take up to 3 teaspoons a day
- **Almonds** – eat 3–4 a day, either roasted or soaked and peeled
- **Whole grains**
- **Ripe, sweet fruits**

Mealtime guidelines

Your approach to mealtimes will affect your digestion. Take your time eating, chew well, and follow the order of the six tastes wherever possible (see p.62).

**BEFORE MEALS**
- Be active – exercise gently.
- Eat 1–2 slices of fresh ginger with lemon juice and rock salt, or chew a few fennel seeds.
- Follow a ritual, such as washing your hands and face and giving thanks (these can be unspoken).

**AFTER MEALS**
- Chew a few fennel seeds.
- Take a walk if possible.
“The period of life, complexion, strength, health, luster, ojas, and energy are the result of the digestive fire.”

Swami Sivananda

Meatime guidelines
Your approach to mealtimes will affect your digestion. Take your time eating, chew well, and follow the order of the six tastes wherever possible (see p.62).

Before meals
- Be active – exercise gently.
- Eat 1–2 slices of fresh ginger with lemon juice and rock salt, or chew a few fennel seeds.
- Follow a ritual, such as washing your hands and face and giving thanks (these can be unspoken).

After meals
- Chew a few fennel seeds.
- Take a walk if possible.

Drinks for agni
To support agni, try the following drinks in the place of cold water.

Agni Drink
- 1 tsp ground cumin
- ½ tsp freshly ground black pepper (for pitta, you can use long pepper)
- 2–3 pinches of ground ginger
- Pinch of rock salt

Pour 1 cup of water into a saucepan. Add the spices and salt. Bring the seasoned water to a boil and simmer for 10 minutes. Pour into a cup and drink 30–45 minutes before your meal.

Ayuurvedic Water
Boil water in an open saucepan for up to 20 minutes. Pour into a Thermos and drink throughout the day. Water boiled in this way is the most easily digestible form.

A strong agni will help to create ojas in the body (see pp.26–27). When agni is strong, the following foods increase ojas:
- Milk – drink 1 cup a day, warmed with spices and consumed hot
- Ghee – take up to 3 teaspoons a day
- Almonds – eat 3–4 a day, either roasted or soaked and peeled
- Whole grains
- Ripe, sweet fruits
FASTMING FOR HEALTH

Fasting means giving up solid food in order to eliminate accumulated toxins and cleanse the system. It is a wonderful method of keeping healthy and activating self-healing.

Benefits of fasting

Fasting gives rest to the stomach, intestines, and digestive organs. It cleanses and rejuvenates the body, removes blockages, relieves agni, and gives energy. Physically, your system gets an entire overhaul. Fasting will help you to develop strong willpower and enable you to concentrate better: it will also allow you to experience clarity.

How to fast

During a fast, drink plenty of hot water, herbal teas, or light broth. Don’t do strenuous mental or physical work during any fast lasting 24 hours or longer. If you get nauseous, drink water mixed with a little lemon juice. Be careful not to give in to cravings or to overeat. If this happens, the best remedy is to fast again.

Breaking your fast

Break any fast that is longer than a day gradually, over the same duration as the fast. Reintroduce vegetable soup, diluted fruit juice, or coconut water first, three to four times daily for one-quarter of the length of the fast. Then, if your fast was longer than 3 days, continue with a diet of mainly fruit and cooked vegetables for the next few days.

16 HOURS

If your lifestyle or constitution doesn’t allow for long fasts, this easy version is highly beneficial, especially when done on a regular basis.

Have a light lunch and then skip dinner or breakfast. This ensures a roughly 16-hour period of not eating solid foods.

A fast can vary in length from 16 hours to a few days. Seek the guidance of an expert if you wish to fast for longer than 2~3 days.

IMPORTANT NOTE

Talk to your doctor before fasting, especially if you have a health condition, or have had one in the past. Do not fast if you have an elevated vata, or you are pregnant, nursing, or underweight.

**EXPERIENCE FOR VATA**
People with elevated vata should not fast. Those with a lot of vata who are strong and healthy may start with a 16-hour fast.

**EXPERIENCE FOR PITTA**
People with a lot of pitta benefit from fasting, as long as they are healthy, but may find it challenging to their active metabolism.

**EXPERIENCE FOR KAPHA**
Those with a lot of kapha in their constitution benefit most from fasting and should fast on a regular basis—ideally once a week.

**24 HOURS**
During a 24-hour fast, drink hot water, hot agni drink (for increased kapha or if there is ama, see p.85), or hot, light vegetable broth.

If it is too difficult to sustain the fast, you can mix the juice of 2–3 fruits with water, or drink 1–2 glasses of freshly pressed carrot juice with a drop of oil.

Alternatively, try a 24-hour fruit fast. Any juicy fruit apart from bananas, mango, or grapes will be beneficial.

**2–3 DAYS**
You can fast for as long as 2 or 3 days on your own, provided you are careful to break the fast slowly by gradually introducing light and soupy foods at the end of the fasting period.

During a 24-hour fast, drink hot water, hot agni drink (for increased kapha or if there is ama, see p.85), or hot, light vegetable broth.

If it is too difficult to sustain the fast, you can mix the juice of 2–3 fruits with water, or drink 1–2 glasses of freshly pressed carrot juice with a drop of oil.

Alternatively, try a 24-hour fruit fast. Any juicy fruit apart from bananas, mango, or grapes will be beneficial.
COOKING AT HOME

The way you eat, as well as what you eat, can have a profound effect on your health. A positive, happy cook and a calm, relaxing environment are as important as the right foods.

Daily routine

Try to follow the guidance on this page and get into the habit of preparing regular, healthy meals suited to the season, your age, and—if required by an imbalance—your constitution.

- **Breakfast** should be nourishing, to give plenty of energy for the start of the day, but easy to digest: warm breakfasts are best.
- **Lunch** is the main meal and should be eaten between 11 a.m. and 2 p.m. If you don’t have time to cook lunch, prepare it in the morning and bring it to work in a thermos.
- **Dinner** should be light, warm, and eaten in the early evening. Avoid late, heavy meals.

Take your time. Eat sitting down.

Eat in a peaceful atmosphere without distractions, and focus on your food. Maintain silence if you can; otherwise, keep the conversation light and positive.

Savor your food. Chew slowly—digestion begins in the mouth.

Enjoy the food you eat.

Your kitchen should be clean and the cook should be happy.

Stay positive, focused, and unhurried.

Keep your food simple. Variation is good, but in moderation.

Eat moderately.

Overeating extinguishes agni and produces ama. Eat to live, don’t live to eat, and remember that food is medicine.

When you are stressed or angry, calm yourself with a few deep breaths or wait a little before eating.

Cook your own food or have a loved one cook for you if possible. The mood of the cook enters the food.

Do not eat or drink anything that is too hot or too cold. Never use ice in your drink.

Buy fresh, organic, unprocessed foods.

How to use the recipe pages

On the following pages you will find nutritious recipes for breakfasts, lunches, dinners, and desserts. These will help you gradually adapt your eating habits to be healthy and appropriate for your situation. If you wish to follow the order of the six tastes (see p.62), eat the grains first and the vegetables last. As salad is hard to digest and needs strong agni (digestive fire), it should also be eaten at the start of the meal. Some breakfast dishes may be suitable for lunch, or some lunches suitable for dinner; the key is to ensure you adapt portion sizes accordingly and keep breakfast and dinner light.

Adapting food by dosha

Many recipes offer a choice of ingredients. Use the dosha variation that is appropriate for the diet you are following. For more information about when to follow a diet for pacifying a specific dosha, see pp.72–73 (vata), pp.76–77 (pitta), or pp.80–81 (kapha). To determine if you have a dosha imbalance, see pp.48–49. If you are catering to several people, opt for a tridosha recipe, or one such as Vegetable Fritters (see p.109) where you can offer a selection of fritters to pacify different doshas.

Choosing ingredients

The ingredients should be available in your local supermarket or health food store; source locally wherever possible. Milk is whole, unless otherwise stated, and can be cow’s, goat’s, rice, or soy milk.

Equipment and storage

No special equipment is required to make the recipes, other than a food processor or immersion blender for soups and chutneys. If you do not have a wok, use a heavy-bottomed saucepan instead. Food should be eaten fresh, not stored or frozen.
SPICED RICE VERMICELLI

This spicy stir-fry makes a flavor-packed start to the day for any Ayurvedic diet. If you cannot find curry leaves, use fresh cilantro instead, as both pacify pitta and kapha.

INGREDIENTS

7oz (200g) rice vermicelli noodles
¼ cup vegetable oil or ghee
1 tsp black mustard seeds
2 tsp cumin seeds
2 tsp peeled and grated fresh ginger
¼ tsp finely chopped green chile, or a pinch chili powder
12 curry leaves (optional)
¼ cup nuts or seeds by dosha
• VATA cashews
• PITTA & KAPHA pumpkin seeds
¼ cup shredded coconut, dried or fresh
• KAPHA omit coconut
1 tsp ground turmeric
2 tsp salt, or to taste
1 ½ cups green peas or finely chopped green beans or snow peas
1 red bell pepper, seeded and finely chopped
2 tbsp lemon juice
¼ cup finely chopped cilantro leaves, to garnish

1. Place the vermicelli in a heavy-bottomed saucepan and pour in enough boiling water to cover completely. Cover with a lid and simmer for 3–5 minutes until the vermicelli is tender, then drain. If the noodles are very long, coarsely chop or snip with scissors. Set aside to cool.

2. Heat the oil or ghee in a nonstick frying pan or large wok. When hot, add the mustard seeds and fry until they start to pop. Add the cumin, ginger, chile, curry leaves (if using), and cashews or pumpkin seeds, and fry for 2–3 minutes until the nuts start to brown a little.

3. Add the coconut (if using) and stir. After 1 minute, add the turmeric, salt, and vegetables. Pour in a little water, then cover, and simmer for about 10 minutes over medium heat until the vegetables are almost tender.

4. Add the cooked vermicelli to the vegetable mixture and stir-fry over low heat for 3 minutes. Remove from the heat, sprinkle with the lemon juice, and transfer to a serving dish. Garnish with the cilantro and serve hot.

Agni

This dish contains a variety of herbs and spices, which all stimulate agni (digestive fire) and aid digestion.
WHOLE-GRAIN OATMEAL

The combination of milk and whole grains in this dish make it great for increasing ojas. It will also aid your digestion and keep you feeling satisfied for several hours, fending off any desire to snack before lunch.

INGREDIENTS

1 cup grain by dosha, washed
- VATA amaranth or quinoa
- PITTA barley, amaranth, or quinoa
- KAPHA millet, barley, or quinoa

¼ cup raisins

¼ cup sunflower seeds

1 tsp ground cardamom

¼ cup sweetener by dosha, to taste
- VATA & PITTA dark brown sugar, or agave or rice syrup
- KAPHA honey or concentrated apple juice

1 ¾ cups milk by dosha
- VATA & PITTA whole milk
- KAPHA skim milk

1 Place the grain of your choice into a heavy-bottomed saucepan. Add 3 ½ cups cold water (1 ¾ cups if using amaranth) and bring to a boil. Reduce the heat and simmer for 15 minutes if using amaranth, 25 minutes if using quinoa, and 45 minutes if using barley or millet, stirring occasionally in each case and adding more water to the barley if necessary.

2 Add the raisins, seeds, and cardamom and cook for another 2 minutes.

3 Divide the oatmeal among 4 bowls, add your sweetener of choice, and finally add ½ cup milk to each bowl.

Honey

If you are using honey, add it once the oatmeal has cooled down a little. In Ayurveda, honey causes ama (toxins) if heated above 104°F (40°C).
WHOLE-GRAIN PANCAKES

These fluffy, whole-grain pancakes are filling and easy to make. Baking powder with sparkling water and milk are used as the raising agent so that this breakfast is suitable for a sattvic diet.

1. Preheat the oven to 250°F (130°C). Mix your flour of choice with the baking powder and salt. Gradually add just enough milk and sparkling water to make a thick batter. You may need all the liquid for the kapha variation, but only about 1¼ cups for the vata and pitta variations. Combine very lightly with a whisk to ensure the pancakes remain fluffy. Don’t worry if the batter is still a little lumpy.

2. Heat some of the ghee or oil in a nonstick frying pan. Test the temperature by adding a spoonful of batter to the pan. It should sizzle without burning, and after 1–2 minutes, bubbles should form.

3. Pour a small ladleful of batter into the pan to make a thick pancake if you are vata or pitta, or a thin pancake if you are kapha. Drizzle a little ghee or oil around the edges and cook until bubbles form on the surface, or until the edges stiffen (about 2 minutes), then flip the pancake, drizzle with more ghee or oil, and cook for another 90 seconds.

4. Keep the finished pancakes on a baking sheet in the warm oven while you cook the rest. Add more ghee or oil to the pan as required. Serve with the toppings.

INGREDIENTS

- **3 cups** flour by dosha
  - **VATA & PITTA** spelt or whole-wheat flour
  - **KAPHA** 2 cups buckwheat flour, plus ½ cup rice flour
- **4 tsp** baking powder
- **pinch** salt, or to taste
- **1¼ cups** milk, or enough to make a thick batter
- **1¼ cups** sparkling water, or enough to make a thick batter
- **4 tbsp** ghee, melted, or vegetable oil

FOR THE TOPPINGS

- **Toppings** by dosha, to taste
  - **VATA** maple or agave syrup, toasted cashews or blanched almonds
  - **PITTA** maple or agave syrup, toasted sunflower or pumpkin seeds
  - **KAPHA** raw honey or apple juice, toasted sunflower or pumpkin seeds
Pitta variation
BREAKFASTS

BREAKFAST SPREADS

Eat these spreads on whole-grain toast as an easy way to adapt your breakfast to a diet that pacifies a specific dosha – simply choose the spread most relevant to you.

**VATA SPREAD**

The sweet vegetables and ghee in this spread pacify vata. Those eating for vata benefit from warm foods, so eat on warm toast or pancakes with a cup of hot, herbal tea.

1 Gently combine all the ingredients in a mixing bowl, or use a food processor to blend them until you have a spreadable paste.

**INGREDIENTS**

- 3 beets, peeled and finely grated
- 1 large avocado, mashed
- 4 tsp ghee, or olive or sesame oil
- 2 tbsp cashews, finely chopped
- 3 tbsp lemon juice, or to taste
- ¼ cup chopped basil
- 1 tsp salt, or to taste
- pinch of freshly ground black pepper

**PITTA SPREAD**

Cucumbers and coconut are cooling, while arugula is bitter and cooling, so all three pacify pitta. Allow the toast to cool before eating.

1 Gently combine all the ingredients in a mixing bowl, or use a food processor to blend them until you have a spreadable paste.

**INGREDIENTS**

- 1 cucumber, peeled, seeded, finely grated, and the water squeezed out
- 1¼ cups arugula, finely chopped
- 1 large avocado, mashed
- 4 tsp ghee or coconut oil
- 2 tbsp sunflower seeds, crushed, or fresh coconut, shredded
- 3 tbsp lemon juice, or to taste
- 2 tbsp chopped mint (optional)
- 1 tsp salt, or to taste
KAPHA SPREAD

The bitter salad greens and a touch of hot spice in this spread pacify kapha. Choose yeast-free bread and eat on warm toast.

1. Gently combine all the ingredients in a mixing bowl, or use a food processor to blend them until you have a spreadable paste.

TRIDOSHA SPREAD

This uncooked prune spread is a healthy way to satisfy a sweet tooth. It is good for all three doshas, but kapha should consume in moderation.

1. Place the dried fruits in a bowl with 1¼ cups water. Let soak overnight.

2. Strain the dried fruits. Place in a food processor with the cinnamon and half the soaking water, then blend to a smooth paste. Alternatively, use an immersion blender. This spread will keep for up to 1 week in the fridge.
LUNCHES
Serves 6–8 | Prep time: 20 mins | Cooking time: 45–60 mins

MEDITERRANEAN VEGETABLE GRATIN with crisp salad

This gratin nourishes those of a vata nature. Those of a pitta nature will benefit from its combination with the raw salad, while those of a kapha nature can indulge if they reduce the amount of cheese.

INGREDIENTS
- 4 firm, ripe tomatoes
- 2 tbsp olive oil
- 12 medium potatoes, peeled and sliced
- 4 carrots, peeled and cut into sticks
- 4 fennel bulbs, thickly sliced
- 1 bunch Swiss chard, chopped
- 2 cups ricotta cheese
  - KAPHA 1 cup
- 1 cup milk
- 3 tsp salt, or to taste
- ½ tsp freshly ground black pepper
- 1½ tsp ground nutmeg
- 3 tbsp finely chopped fresh rosemary leaves
- 3 tbsp finely chopped fresh sage leaves
- 10oz (300g) mozzarella cheese, thinly sliced
- 4 tsp pine nuts
- 8 black olives, pitted, to garnish
- ½ bunch basil, to garnish

MAIN DISH
VEGETABLE GRATIN

1. Preheat the oven to 400ºF (200ºC). Soak the tomatoes in a bowl of boiling water for 2 minutes, then remove their skins. Slice thinly.

2. Grease a large roasting pan with the oil. Arrange the sliced potatoes in a layer on the bottom of the pan. Add the carrot sticks to form the next layer, then the fennel, and then the Swiss chard. Set the pan aside.

3. Whisk the ricotta cheese and milk into a creamy sauce and add the salt and pepper, nutmeg, rosemary, and sage. Pour the sauce into the roasting pan over the vegetable and potato layers. Cover the sauce with a layer of sliced tomatoes and mozzarella.

4. Cover with foil and bake in the oven for about 45–60 minutes, or until cooked through. Ten minutes before the end, remove the foil and sprinkle the pine nuts over the gratin. When the nuts and cheese have browned, remove the gratin from the oven and garnish with the black olives and basil leaves.

Adding salad

Salad and raw foods are particularly beneficial to pitta in the summer. If you are eating for elevated vata or kapha, it is advisable to keep portions modest or to avoid salad.
Blend the sunflower seeds, lemon juice, salt, pepper, and ¼ cup water to a smooth consistency, adding more water if necessary. Set aside.

Place the salad in a bowl and drizzle with the dressing.
BAKED CUMIN POTATOES with zucchini and hummus

This nourishing dish is served with hummus, an alternative, dosha-adaptable way of getting legumes into your diet. Hummus also serves as a light meal when eaten with whole-grain toast.

**INGREDIENTS**
- 1/4 cup vegetable oil
- 2 tsp salt, or to taste
- pinch of chili powder
- 4 medium zucchini, washed, trimmed, and halved lengthwise
- 2 tsp fennel seeds, crushed
- 2 tsp ground cumin
- 12 medium potatoes, well-scrubbed and halved lengthwise

**MAIN DISH**

BAKED CUMIN POTATOES with zucchini

1. Preheat the oven to 400°F (200°C). Mix the oil with the salt and chili powder, then rub half the mixture onto the zucchini. Sprinkle the zucchini with the crushed fennel seeds.

2. Stir the ground cumin into the remaining oil mixture and rub the mixture onto the potatoes.

3. Arrange the potatoes and the zucchini on two separate baking sheets. Place the potatoes in the oven to bake. After about 10 minutes, put the zucchini in the oven. Bake for 30 minutes, or until both the potatoes and zucchini are tender. Serve with hummus.

**Dip it**

You could try cutting the potatoes and zucchini into french fry shapes before baking, and then dipping them into the hummus when cooked.
LUNCHES

1. Place the mung dal or chickpeas in a pan of water. Use plenty of water for the chickpeas and just enough to sit ¾ inch (2cm) above the surface of the mung dal. Bring to a boil. Reduce the heat and simmer until soft (about 30 minutes for the mung dal, and about 90 minutes for the chickpeas). If using mung dal, add more hot water during cooking if necessary. Strain, retaining some of the cooking water.

2. Blend the legumes, nut paste, olive oil, chili powder, salt, lemon juice, and remainder of the cooking water into a creamy paste.

3. Transfer the hummus into a bowl, sprinkle with the paprika, and garnish with the herbs and black olives.

**Mung dal**
If cooking for vata, don’t use a blender, as the mung dal will break up as it cooks. Whisk all the ingredients together, adding a little water if necessary.

---

**INGREDIENTS**

- ¾ cup legumes by dosha, well-rinsed
  - VATA yellow mung dal
  - PITTA & KAPHA dried chickpeas, soaked overnight
- 3 tbsp nut paste by dosha
  - VATA tahini
  - PITTA almond butter or double olive oil
  - KAPHA 2 tbsp tahini
- ¼ cup olive oil
  - KAPHA 2 tbsp
- pinch of chili powder
  - KAPHA 2 pinches
- 1 tsp salt, or to taste
- ¼ cup lemon juice, or to taste
- 1 tsp paprika
- ¼ cup chopped basil or cilantro, to garnish
- 8 black olives, pitted, to garnish
LUNCHES

KHICHI WITH RAITA

This rice-and-lentil dish, accompanied by a refreshing raita, is a classic meal for a sattvic diet. Make the raita first (or in advance) and set aside. The kicheri will swell up during cooking, so make sure you use a large-enough pan.

MAIN DISH

KICHDI

1. Put the rice and mung beans into a large, heavy-bottomed pan. Add the turmeric, cardamom, peppercorns, cinnamon, and 3¾ cups cold water. Cover and bring to a boil, then reduce the heat and simmer for 10 minutes.

2. Add the diced vegetables and the salt, cover again, and simmer for another 10 minutes until soft. If using spinach or broccoli and Swiss chard, leave these out and add them during the final 2–5 minutes of cooking.

3. Heat the oil or ghee in a small saucepan and fry the cumin seeds until they are golden brown. Add the ginger and, after a few seconds, the curry powder. Remove from the heat and gently stir the spices into the rice and mung bean mixture.

4. Sprinkle with the lemon juice, garnish with the cilantro, and serve accompanied by raita.

Texture

Traditionally, khichdi is a creamy dish which is suited to all constitutions. Here we show a pitta-kapha variation with lots of vegetables for kapha and firmly cooked rice and dal for Pitta’s strong digestive fire.
RAITA

1. Toast the cumin seeds in a pan over medium heat until they become fragrant and turn a shade darker. Grind to a powder using a mortar and pestle or an electric coffee grinder.

2. Combine the grated cucumber, yogurt, salt, and ground cumin in a bowl. Sprinkle with the cilantro.

INGREDIENTS
- 2 tsp cumin seeds
- 1 cucumber, about 7oz (200g), peeled and grated
- 1 cup yogurt by dosha
  - VATA & PITTA full-fat
  - KAPHA low-fat
- 1 tsp salt, or to taste
- ¼ cup finely chopped cilantro leaves

Cucumber

Grate the cucumber onto paper towels. This will soak up any excess water that could make the raita too loose.

Raita is suitable for all doshas, especially pitta.
SIMPLE DAL with grains and almond vegetables

Grains, vegetables, legumes, and fats are the four core foods that the body requires. A simple dal served with grains and vegetables is the most popular form of lunch in Ayurvedic cuisine, as it contains all of these foods.

INGREDIENTS

FOR THE GRAINS
- 1 cup grain by dosha
  - VATA bulgur wheat, quinoa, or white Basmati rice
  - PITTA barley, brown Basmati rice, or bulgur wheat
  - KAPHA barley, brown rice, or buckwheat

FOR THE CURRY PASTE
- 4 tsp vegetable oil or ghee
- 1 tsp cumin seeds
- 3 tsp peeled and finely chopped fresh ginger
- ¼ tsp green chile, or pinch of chili powder
- 1 tsp ground cumin
- 1 tsp ground coriander
- 2 tsp curry powder (garlic-free) or garam masala
- 1 tsp turmeric

FOR THE GRAINS
- ½ tsp salt

FOR THE CURRY PASTE
- 4 tsp vegetable oil or ghee
- 1 tsp cumin seeds
- 3 tsp peeled and finely chopped fresh ginger
- ¼ tsp green chile, or pinch of chili powder
- 1 tsp ground cumin
- 1 tsp ground coriander
- 2 tsp curry powder (garlic-free) or garam masala
- 1 tsp turmeric

MAIN DISH

SIMPLE DAL with grains

1. Place the legumes into a large pan with 3 cups water and the turmeric, then bring to a boil. Remove any foam with a slotted spoon, reduce the heat, and cover. Vata legumes take about 30 minutes, pitta about 60 minutes, and kapha about 75 minutes. Add more hot water if needed. When the legumes are soft, add the leafy vegetables and salt. Simmer for another 10 minutes, then remove the pan from the heat.

2. Add the grains to a medium pan with 2 cups water (3 cups for brown rice) and the salt, cover, then bring to a boil. Reduce the heat and simmer until done — do not stir or uncover. White Basmati, quinoa, and bulgur wheat take about 20 minutes; brown Basmati and barley about 30 minutes; and brown rice and buckwheat about 60 minutes. Drain.

3. For the curry paste, heat the oil or ghee in a small frying pan, then add the ground cumin seeds, ginger, and chile. After a few seconds, add the cumin, coriander, curry powder, and turmeric and heat briefly. As soon as the spices are fragrant, remove the pan from the heat and stir in 3 tablespoons of water. The hot pan will make the water evaporate, leaving a paste.

4. Stir the curry paste into the cooked legumes, then add the lemon juice and garnish with the cilantro. Serve the dal with the grains and almond vegetables.

INGREDIENTS

- ½ cup legumes by dosha, well-rinsed
  - VATA yellow mung dal, split green mung dal, or red lentils
  - PITTA chana dal, whole green mung dal, or dried green lentils, soaked overnight and drained
  - KAPHA dried chickpeas, toor dal, or aduki beans, soaked overnight and drained

- 1 tsp ground turmeric

- 7oz (200g) spinach or the green part of Swiss chard, washed and torn

- 1 tsp salt, or to taste

- 3 tsp lemon juice

- 4 tsp finely chopped cilantro leaves

INGREDIENTS

- 1¾lb (800g) vegetables by dosha, washed, peeled, and diced
  - VATA beets, parsnips, and sweet potatoes
  - PITTA broccoli, green beans, and spinach
  - KAPHA cabbage, cauliflower, and green beans

- 2 tsp ground turmeric

- ½ cup ground almonds

- ¼ cup vegetable oil

- 2 tsp ground cumin

- 8 curry leaves (optional)

- 1 tsp salt, or to taste

- ½ tsp freshly ground black pepper

- 2 tsp lemon juice

ALMOND VEGETABLES

SIDE DISH

Purifying Vegetables that are low in starch are purifying foods, which means that they help reduce any excess tissue and pacify kapha.
1 Place the vegetables in a saucepan with 1 cup water and the turmeric. Bring to a boil, then reduce the heat and simmer for about 10 minutes until tender.

2 Stir in the ground almonds, oil, cumin, curry leaves (if using), and salt and pepper, and cook for another 2 minutes, adding more hot water if necessary. Remove from the heat and sprinkle with the lemon juice.

**Purifying**

Vegetables that are low in starch are purifying foods, which means that they help reduce any excess tissue and pacify kapha.
STIR-FRIED VEGETABLES

with sesame noodles

Make sure not to overcook this crisp stir-fry. Keep the vegetables tender for vata and kapha; pitta will benefit from (and may enjoy) eating them al dente. Serve with sesame noodles or simple boiled rice.

MAIN DISH

STIR-FRIED VEGETABLES

1 Marinate the tofu for at least 10 minutes in 2 tablespoons of soy sauce, 1 teaspoon of cumin, a pinch of chili powder, and the ground ginger.

2 Heat 4 tablespoons of oil in a wok. Add 2 tablespoons of grated ginger and cook for 30 seconds, then add the pepper, nutmeg, cinnamon, and the remaining cumin and chili powder. Immediately add the sliced vegetables, with the exception of the bean sprouts (if using), together with the remaining soy sauce, a little water, and the stalk of lemongrass (if using).

3 Stir-fry the vegetables until they are cooked according to dosha: vata, well-cooked; pitta, slightly undercooked; and kapha, just crisp or al dente. If using bean sprouts, add these in the final 2 minutes of cooking. Remove from the heat and add the remaining grated ginger. If you are using grated lemon zest, add it now.

4 Heat the remaining oil in a nonstick frying pan and pan-fry the tofu with the marinade over medium heat until it turns golden brown and crisp. Add this to the vegetables.

5 Add more soy sauce to taste if required, sprinkle with the sesame oil (if using, avoid adding oil here if cooking for those with dominant kapha), and add the basil to serve.
SIDE DISH

SESAME NOODLES

INGREDIENTS

7oz (200g) egg-free noodles by dosha
- **VATA** rice vermicelli
- **PITTA** whole-wheat noodles
- **KAPHA** buckwheat noodles

2 tsp salt, or to taste
2 tbsp vegetable oil (optional)
¼ cup brown sesame seeds

1. If using rice vermicelli, cover with boiling water, let stand for 3 minutes, then drain well. If using whole-wheat noodles, boil them for 10 minutes in salted water until *al dente*, then drain. If using buckwheat noodles, boil for 5 minutes in salted water, drain, then rinse in cold water. Drizzle with oil (if using).

2. Toast the sesame seeds in a frying pan over medium heat until they become fragrant and turn a shade darker. Sprinkle over the noodles, mix well, and serve.
ALOO METHI
with mango chutney

This potato dish with fenugreek leaves makes a light dinner suitable for all doshas, or can be used to accompany a lunch of curry or dal. It contains five of the six tastes (only astringent is missing), making it a well-rounded Ayurvedic meal.

1. Start by making the chutney: Purée the mango, chili powder, salt, lemon juice, and agave syrup with a little water using a food processor or immersion blender.

2. Heat the ghee or oil in a small pan over medium heat. Add the mustard seeds and cook until they start to pop. Remove from the heat, add to the mango purée, and set aside.

3. Next make the aloo methi: In a heavy-bottomed saucepan, heat the ghee or oil. When hot, add the potatoes along with the turmeric, salt, and chili powder, and sauté for a few minutes.

4. Add the fenugreek leaves (if using) and some of the soaking water. Cover and simmer over low heat for 20 minutes or until the potatoes are cooked through. If you are using fresh cilantro, add it at the end of the cooking time.

5. Remove from the heat, sprinkle with the lemon juice, and transfer to a serving dish. Serve hot, with a dollop of the mango chutney. The chutney will keep for 3 days in the fridge.
CREAMY SQUASH SOUP

Quick to make and delicious to eat, this soup makes the perfect light, easily digestible, tridosha meal for a 6 p.m. dinner. This means it will be fully digested by the time you go to bed, and won’t affect your sleep.

INGREDIENTS

<table>

</tr>
<tr>
<td>¼ cup</td>
<td>finely chopped dill</td>
</tr>
<tr>
<td>2 tbsp</td>
<td>lemon juice</td>
</tr>
</tbody>
</table>

1. Heat the ghee or oil in a large saucepan. Add the squash and potatoes and stir-fry for a few minutes.

2. Cover with cold water, then add the nutmeg and salt and pepper and bring to a boil. Cover and simmer for 10–15 minutes over low heat until the vegetables are tender.

3. Using a food processor or immersion blender, purée most of the vegetables to make a creamy soup, leaving a few chunks. Stir in the dill and lemon juice before serving.

**Color**

Stir in the dill, rather than blend it, in order not to dull the vibrant color of the soup.
INGREDIENTS

2lb (900g) vegetables by dosha, peeled and grated, shredded, or finely diced
• VATA equal parts beets and sweet potatoes
• PITTA equal parts celeriac and carrots
• KAPHA equal parts cabbage and spinach

¼ cup chickpea flour, sifted
2 tsp salt, or to taste
½ tsp freshly ground black pepper
½ tsp grated nutmeg
bunch fresh parsley, finely chopped
¼ cup vegetable oil

FOR THE DIP

2 ripe, medium avocados
3 tbsp lemon juice, plus 1 slice of lemon to garnish
4 cherry tomatoes, diced
¼ cup finely chopped basil, plus leaves to garnish
10 black olives, pitted and quartered, plus extra to garnish
4 tsp olive oil
½ tsp salt, or to taste
pinch freshly ground black pepper

1. Start by making the dip: Halve and core the avocados, scoop out the pulp with a spoon, then mash with a fork. Immediately sprinkle with the lemon juice.
2. Gently fold in the tomatoes, basil, olives, oil, and salt and pepper. Garnish with a lemon slice, a few olives, and basil leaves. Set aside.
3. To make the fritters, combine the vegetables, flour, salt and pepper, nutmeg, and parsley with enough water for the mixture to hold when you press it together. If it doesn’t hold, add more flour. Don’t let the mixture sit for a long time because it will become too runny.
4. Preheat the oven to 250ºF (130ºC). Heat the oil in a nonstick frying pan. Shape the mixture into 10 patties and place several in the pan. Fry the fritters slowly over medium heat for about 4 minutes on each side. Adjust the heat so that the fritters gently sizzle and the insides cook without the outsides burning. Place the finished fritters on a baking sheet in the warm oven while you use up the remaining mixture. Serve warm with the avocado dip.

VEGETABLE FRITTERS with avocado-olive dip

These crispy fritters make for a colorful dinner table if you are catering for several different doshas. Make a batch of each type so that there is an option for everyone, and serve with the avocado dip.

DINNERS
Makes 10 fritters
| Prep time: 10 mins |
| Cooking time: 15–20 mins |

Low fat

Alternatively, you can place the fritters on a greased baking sheet, drizzle them with the remaining oil, and bake them in the oven for 25–30 minutes at 400ºF (200ºC).
VEGETABLE FRITTERS
with avocado-olive dip

These crispy fritters make for a colorful dinner table if you are catering for several different doshas. Make a batch of each type so that there is an option for everyone, and serve with the avocado dip.

INGREDIENTS

2lb (900g) vegetables by dosha, peeled and grated, shredded, or finely diced
- VATA equal parts beets and sweet potatoes
- PITTA equal parts celeriac and carrots
- KAPHA equal parts cabbage and spinach

¼ cup chickpea flour, sifted
2 tsp salt, or to taste
½ tsp freshly ground black pepper
½ tsp grated nutmeg
bunch fresh parsley, finely chopped
¼ cup vegetable oil

FOR THE DIP
2 ripe, medium avocados
3 tbsp lemon juice, plus 1 slice of lemon to garnish
4 cherry tomatoes, diced
¼ cup finely chopped basil, plus leaves to garnish
10 black olives, pitted and quartered, plus extra to garnish
4 tsp olive oil
½ tsp salt, or to taste
pinch freshly ground black pepper

1 Start by making the dip: Halve and core the avocados, scoop out the pulp with a spoon, then mash with a fork. Immediately sprinkle with the lemon juice.

2 Gently fold in the tomatoes, basil, olives, oil, and salt and pepper. Garnish with a lemon slice, a few olives, and basil leaves. Set aside.

3 To make the fritters, combine the vegetables, flour, salt and pepper, nutmeg, and parsley with enough water for the mixture to hold when you press it together. If it doesn’t hold, add more flour. Don’t let the mixture sit for a long time because it will become too runny.

4 Preheat the oven to 250°F (130°C). Heat the oil in a nonstick frying pan. Shape the mixture into 10 patties and place several in the pan. Fry the fritters slowly over medium heat for about 4 minutes on each side. Adjust the heat so that the fritters gently sizzle and the insides cook without the outsides burning. Place the finished fritters on a baking sheet in the warm oven while you use up the remaining mixture. Serve warm with the avocado dip.

Low fat

Alternatively, you can place the fritters on a greased baking sheet, drizzle them with the remaining oil, and bake them in the oven for 25–30 minutes at 400°F (200°C).
RICE PULAO
with ginger-raisin chutney

Rice cooked with vegetables and spices is easy to prepare after a long day at work. Adding a small amount of chutney to your plate is a good way to get more of the six tastes into your meal: this chutney is sweet, sour, and pungent.

INGREDIENTS

- ¼ cup ghee or vegetable oil
- 1 cup white or brown Basmati rice, soaked in water for 30 minutes; then drained
- 14oz (400g) vegetables by dosha, finely diced
  - VATA equal parts green peas (whole) and carrots
  - PITTA equal parts cauliflower and green bell peppers
  - KAPHA equal parts green beans and red bell peppers
- ¼ cup nuts or seeds by dosha
  - VATA cashews or blanched almonds
  - PITTA blanched almonds
  - KAPHA pumpkin seeds
- ¼ cup raisins or chopped dates (optional)
- 2 tsp salt, or to taste
- 8 black peppercorns
- 2 tsp ground turmeric
- 1 cinnamon stick
- 8 green cardamom pods
- 4 bay leaves
- ¼ cup coarsely chopped cilantro leaves
- ¼ cup lemon juice
- lemon wedges, to garnish

FOR THE CHUTNEY

- ½ cup raisins
- ¼ cup peeled and finely chopped fresh ginger
- pinch of chili powder
  - KAPHA 2 pinches
- 2 tbsp lemon juice, or to taste
- sprig of cilantro, to garnish
- 1 lemon wedge, to garnish

1. Heat the ghee or oil in a heavy-bottomed saucepan. Add the rice and stir-fry for 2 minutes.

2. Add the vegetables, nuts or seeds, raisins or dates (if using), salt, peppercorns, turmeric, cinnamon, cardamom pods, and bay leaves and stir-fry for another 3 minutes.

3. Add 1 cup water, bring to a boil, cover, and simmer over low heat. Do not stir or lift the lid until the rice is cooked and has absorbed the water (about 15 minutes for white Basmati and 25 minutes for brown Basmati).

4. Make the chutney: Pulse the raisins, ginger, chili powder, and lemon juice in a small food processor to form a creamy paste, or mash if necessary. Garnish with the cilantro and lemon wedge and set aside.

5. Sprinkle the cilantro and lemon juice over the pulao and garnish with lemon wedges. Serve with the chutney.
MIXED VEGETABLE SOUP

This soup is an ideal meal if your agni needs strengthening. It is light and packed full of spices, and the vegetables are well-cooked. Eating before 6 p.m. will ensure that you can digest your food properly before going to bed.

INGREDIENTS

- ¼ cup vegetable oil or ghee by dosha
  - VATA & PITTA vegetable oil or ghee
  - KAPHA vegetable oil
- 1lb 5oz (600g) vegetables by dosha, peeled and diced or shredded
  - VATA equal parts fennel, sweet potatoes, and snow peas
  - PITTA equal parts broccoli, carrots, and celeriac
  - VATA equal parts kale, parsnips, and red bell peppers
- 2 tsp salt, or to taste
- 4 bay leaves
- 2 tsp ground turmeric
- 2 tsp ground cumin
- 1 tsp ground coriander
- 1 tsp ground ginger
- pinch of chili powder
- pinch of ground cloves
- ½ tsp ground cinnamon
- 4 tsp lemon juice
- ¼ cup shredded cilantro leaves or parsley

Spices

For best results, measure out the spices before you start cooking, so that you can add them to the pan at the same time.

1 Heat the oil or ghee in a large saucepan, add the vegetables (except for the snow peas, broccoli, or kale if using), salt, bay leaves, and all the spices, and stir-fry for a few minutes.

2 Add 3½ cups cold water to the pan. Bring to a boil, cover, and simmer over low heat for 10–15 minutes, or until the vegetables are tender. Add the green vegetables 5 minutes before the end.

3 Remove from the heat, discard the bay leaves, and add the lemon juice and cilantro or parsley. Serve with toast or boiled grains.
WHOLE-GRAIN PASTA
with pesto sauce

Here, a Western favorite is adapted by dosha, proving how easy eating a specific dosha diet can be. It contains six tastes—the pasta is sweet; the cheese sour and salty; and the herbs pungent, bitter, and astringent.

INGREDIENTS

**14oz (400g) egg-free pasta by dosha**
- VATA spelt pasta
- PITTA whole-wheat pasta
- KAPHA buckwheat noodles

**1 tsp salt**

**FOR THE PESTO SAUCE**

- VATA equal parts pine nuts and cashews
- PITTA equal parts blanched almonds and pumpkin seeds
- KAPHA equal parts sunflower seeds and pumpkin seeds

**¼ cup ricotta cheese**

**¼ cup olive oil**

**bunch basil, coarsely chopped**

**¼ cup sage leaves**

**¼ cup rosemary leaves**

**2 tsp salt, or to taste**

**½ tsp freshly ground black pepper**

**4 tsp lemon juice**

**2 cups Parmesan cheese, grated (optional)**

1. Boil the pasta in a large pan of salted water according to the instructions on the package until *al dente*. Strain and set aside.

2. To make the pesto, toast the nuts or seeds in a frying pan until fragrant.

3. Blend the toasted nuts or seeds, ricotta, oil, herbs, salt and pepper, lemon juice, and a little cooking water into a smooth, creamy paste using a food processor or immersion blender.

4. Mix the pasta with the pesto sauce and a little cooking water. Sprinkle with the Parmesan (if using) and serve.

**Fresh herbs**

The fresher the basil, sage, and rosemary, the better, as fresher foods provide more sattva.
INGREDIENTS

FOR THE FILLING
1lb (450g) fresh fruits by dosha, cleaned, peeled, and pitted, or cored and diced

• VATA: equal parts sweet apples and peaches
• PITTA: equal parts sweet apples and sweet plums
• KAPHA: equal parts pears and apricots

2 tbsp dark brown sugar
1 tbsp cornstarch
1 tbsp ground cinnamon
pinch of freshly ground black pepper
2 tbsp lemon juice

FOR THE CRUMBLE TOPPING
14 tbsp (1 stick + 6 tbsp) butter or margarine, cut into cubes, plus extra for greasing
2½ cups flour by dosha
• VATA: spelt flour
• PITTA: whole-wheat flour
• KAPHA: buckwheat flour
¾ cup dark brown sugar
2 tsp vanilla essence
pinch of salt

1. Preheat the oven to 350°F (180°C). Grease a baking dish with some butter or margarine.
2. To make the filling, gently mix together the fruit, sugar, cornstarch, cinnamon, pepper, and lemon juice, being careful not to mash the fruit.
3. For the crumble topping, combine the flour, sugar, vanilla, and salt in a mixing bowl. Gently rub in the butter or margarine with your fingertips until the mixture resembles bread crumbs.
4. Transfer the fruit mixture to the baking dish, then sprinkle the crumble topping evenly over the top. Bake for about 40 minutes until the topping is golden brown and the fruit juices are bubbling. Serve warm or at room temperature.
## FRUIT CRUMBLE

Fruit should be cooked when it is being eaten as part of a meal because this makes it more easily digestible. Crumble is a delicious way to include a variety of fruits in your diet.

### INGREDIENTS

**FOR THE FILLING**

- **1lb (450g) fresh fruits by dosha**, cleaned, peeled, and pitted, or cored and diced
  - **VATA** equal parts sweet apples and peaches
  - **PITTA** equal parts sweet apples and sweet plums
  - **KAPHA** equal parts pears and apricots
- 2 tbsp dark brown sugar
- 1 tbsp cornstarch
- 1 tbsp ground cinnamon
- pinch of freshly ground black pepper
- 2 tbsp lemon juice

**FOR THE CRUMBLE TOPPING**

- 14 tbsp (1 stick + 6 tbsp) butter or margarine, cut into cubes, plus extra for greasing
- 2½ cups flour by dosha
  - **VATA** spelt flour
  - **PITTA** whole-wheat flour
  - **KAPHA** buckwheat flour
- ¾ cup dark brown sugar
- 2 tsp vanilla essence
- pinch of salt

### Instructions

1. Preheat the oven to 350°F (180°C). Grease a baking dish with some butter or margarine.

2. To make the filling, gently mix together the fruit, sugar, cornstarch, cinnamon, pepper, and lemon juice, being careful not to mash the fruit.

3. For the crumble topping, combine the flour, sugar, vanilla, and salt in a mixing bowl. Gently rub in the butter or margarine with your fingertips until the mixture resembles bread crumbs.

4. Transfer the fruit mixture to the baking dish, then sprinkle the crumble topping evenly over the top. Bake for about 40 minutes until the topping is golden brown and the fruit juices are bubbling. Serve warm or at room temperature.

### Topping

You can mix the ingredients for the crumble topping in a food processor instead of rubbing in the butter or margarine by hand.
DESSERTS

KHEER

This milk pudding contains grains, milk, ghee, and almonds, making it a good dish for increasing ojas. It is beneficial for all constitutions, but those eating for kapha should eat only a half portion.

1 Put the rice in a heavy-bottomed saucepan, pour in 1¼ cups cold water, and bring to a boil. Cover and simmer over low heat for 25 minutes, or until the rice turns soft and has absorbed all the water.

2 Mash the cooked rice with a potato masher or a wooden spoon. Add the milk and cardamom and bring to a boil. Simmer over low heat for another 5 minutes, stirring constantly to prevent the mixture from burning on the bottom of the pan. Remove from the heat and add the dates, syrup, and rosewater.

3 Pan-fry the blanched almonds in the ghee or oil until they are golden brown, then add the coconut. If cooking for kapha dosha, add the pepper as well. The coconut will turn golden brown very quickly, so be careful to not burn it. Add the nut mixture to the milk pudding and serve.

INGREDIENTS

- **1/2 cup** white Basmati rice
- **1 1/4 cups** milk by dosha
  - VATA & PITTA whole milk
  - KAPHA skim milk
- **1 tsp** ground cardamom
- **1/4 cup** pitted and chopped dates
- **1/2 cup** agave syrup or rice syrup
- **2 tbsp** rosewater
- **1/4 cup** ghee or coconut oil
  - KAPHA 2 tbsp
- **1/4 cup** blanched almonds, peeled and chopped
  - KAPHA 2 tbsp
- **1/4 cup** shredded coconut
- pinch of freshly ground black pepper (optional)

Soothing

Sweetened rice cooked with milk and sugar is described in the ancient yoga scripture *Mahabharata* as “the best of all foods.” It has a soothing effect on the mind.
LASSI

This cooling, refreshing drink contains sweet syrup and sour yogurt. Vata is pacified by the sweet and sour taste, pitta is pacified by the sweet taste, and kapha is pacified by the use of honey as a sweetener.

Put the yogurt, syrup or honey, cardamom, and rosewater into a food processor with 2½ cups cold water and process until smooth. Alternatively, use an immersion blender to combine the ingredients until frothy. Pour into tall glasses and serve immediately.

INGREDIENTS

1¼ cups yogurt by dosha
• VATA & PITTA full-fat yogurt
• KAPHA low-fat yogurt
¼ cup syrup by dosha
• VATA & PITTA agave syrup
• KAPHA raw honey
1 tsp ground cardamom
¼ cup rosewater, or to taste

Mixer

If you don't have a food processor or blender, you can use an electric mixer to make the lassi.
AND RELAXATION

"Health is wealth, peace of mind is happiness, yoga shows the way."

SWAMI VISHNUDEVANANDA
YOGA
ASANAS, PRANAYAMA, AND RELAXATION

"Health is wealth, peace of mind is happiness, yoga shows the way."

SWAMI VISHNUDEVANANDA
AYURVEDA AND YOGA

Tracing their origin back to the oldest Indian scriptures, the Vedas, Ayurveda and yoga, are sister sciences. If yoga is performed correctly, it will help people of all doshas improve their physical and mental health.

The three aspects of yoga

A lot of people associate yoga mostly with the different asanas (yoga poses), but each pose is supported by rhythmic breathing to control energy levels (pranayama), and short periods of relaxation. While performing an asana, one must be simultaneously trying to achieve posture, breath control, and relaxation. This is something that comes with time and practice.

HATHA AND RAJA YOGA

These two systems are the most commonly practised worldwide. They are based on an understanding of the body and mind as vehicles of pure consciousness.

Hatha yoga, covered in this chapter, focuses on asanas, pranayama, and relaxation to unblock and channel prana (“life energy”).

Raja yoga, covered in the next chapter, emphasizes the mental control of prana through visualization, positive thinking, concentration, and meditation.

ASANAS

Performing the asanas (yoga poses) keeps the joints, muscles, ligaments, tendons, and other moving parts of the body healthy, increasing circulation and flexibility. They also energize all of the body systems, providing an internally orientated, noncompetitive, and meditative exercise routine, while promoting an inner sense of calm.

PRANAYAMA

Controlling the breath allows prana (“life energy”) to be stored and released from the solar plexus. This revitalizes the body and mind when performed before, during, and after asanas. Throughout the session, focus on the breath to reduce fatigue and boost oxygen supply.

Breath control is important to aid movement and recharge the muscles.

The tree asana is one of 12 poses featured in this chapter.

RELAXATION

Even when trying to rest, many people expend a lot of energy through tension. During complete relaxation, there is little or no energy being consumed—only enough to maintain metabolic function. Short periods of rest are taken between the asanas, while longer relaxation exercises are performed as the final element of the session.
Yoga and the doshas

The asana, pranayama, and relaxation exercises are the same for people of all constitutions, and a balanced approach to these aspects of yoga will naturally enhance the balance of all three doshas. However, the experience of performing the exercises will vary depending on a person’s constitution. Look out for dosha boxes (see below) to learn how someone of your constitution might approach each exercise.

“A balanced approach to yoga will help stabilize all three doshas.”

RELAXATION

Even when trying to rest, many people expend a lot of energy through tension. During complete relaxation, there is little or no energy being consumed — only enough to maintain metabolic function. Short periods of rest are taken between the asanas, while longer relaxation exercises are performed as the final element of the session.

EXPERIENCE FOR VATA

Movement comes easily to the vata body, so practicing the asanas is often pleasant. Moving slowly and holding poses, however, can be difficult.

EXPERIENCE FOR PITTA

Those with an ambitious pitta nature should direct their focus toward the simultaneous control of breathing, posture, and relaxation.

EXPERIENCE FOR KAPHA

The kapha body is often slow to get started during a workout, but it has good strength, patience, and endurance once it does.
YOUR YOGA SESSION

This chapter follows a yoga session from start to finish. The session is the same for all constitutions. Depending on your experience, use the beginner or intermediate tips to improve your practice.

1 Pranayama and warm up

**TIME:** about 20 minutes

Breathing and stretching exercises prepare your body for entering, holding, and releasing the asanas.

**BEGINNER TIPS**
- **Never strain for** breath during breathing exercises. If you feel your breath starting to strain, hold it for a shorter time than given or reduce the number of breaths in the exercise.
- **If you find** yourself in discomfort, substitute the rest of the breathing exercises with slow abdominal breathing.

**INTERMEDIATE TIPS**
- **As you become more** comfortable with the breathing exercises, use them to focus on the awareness of your body.
- **Relax with** long exhalations and recharge with long inhalations.
- **When comfortable,** settle your mind on your third eye (see p.176).

2 Asana practice

**TIME:** about 35 minutes

These poses make up the core of the session. Make sure you relax for 1–2 minutes between each asana before moving on.

**BEGINNER TIPS**
- **Observe how** easy you find posture, rhythmic breathing, and relaxation while holding each asana.
- **If an asana** becomes easier, increase the time you hold it.
- **If your** breathing becomes faster and you become tense, reduce the time you hold an asana.

**INTERMEDIATE TIPS**
- **As you become comfortable** with each asana, focus on slowly entering and leaving it with precision and grace.
- **Keep a count** of the length of your breaths during the entire yoga session to improve your concentration.
- **Observe how** the combined effort of your arms and legs support your spine position.

Before your session

- **You will need** a yoga mat and a cushion for pranayama. You may want a blanket to stay warm during final relaxation.
- **Do not eat** for 2–3 hours before.
- **It is advised** to take a shower or bath before, but not after practice.
3 Final relaxation

TIME: about 20 minutes

Use these exercises to find a state of complete relaxation, recharging your body after the exertion of the asanas.

BEGINNER TIPS

- At first, allow more time for active relaxation than for autosuggestion.
- As you feel more comfortable in corpse pose (used for relaxation), start to bring in autosuggestion techniques.
- Observe how the release of tension increases your vital energy.

INTERMEDIATE TIPS

- As you become comfortable with autosuggestion, approach this final relaxation as a detached observer.
- Actualize the power of each thought command.
- Remain awake and aware using conscious breathing.

EXPERIENCE FOR VATA
Vata types can use sun salutations to aid breath control, and relaxation between asanas to prevent overexertion.

EXPERIENCE FOR PITTA
Pranayama deepens the breath, allowing the pitta body to safely expand stretches during the sun salutation and asanas.

EXPERIENCE FOR KAPHA
Those of a kapha nature will find their motivation increases with each asana as blood circulation and prana increases.

Shoulderstand (see pp.138–39)
Plow (see pp.140–41)
Fish (see pp.142–43)

Sitting forward bend (see pp.144–45)

Spinal twist (see pp.156–57)
Triangle (see pp.158–59)

Active relaxation (see pp.160–61)
Relaxing with autosuggestion (see pp.162–63)
The Yogic Breath

Pranayama (energy control through breathing) is one of the three key aspects of yoga. Practice the breathing exercises on the following pages at the beginning of each session.

Abdominal Breathing

This technique is important for pranayama as it draws air into the lowest (and largest) part of the lungs. Completely relax your abdominal muscles so your diaphragm can move freely.

1. Lie on your back, palms on your abdomen and fingers apart. As you breathe, feel the movement between your first rib, your navel, and your hips.

2. Inhale for 5 seconds. Pay attention to how your hands rise and your fingers draw apart as your abdomen expands.

3. Exhale for 5 seconds. Your hands will move down and your fingers will come together. Repeat these steps for 2 minutes.

Experience for Vata

The smaller vata rib cage and sensitive nervous system both benefit from the expansion provided by abdominal breathing.

Experience for Pitta

The greater sensory awareness provided by abdominal breathing is beneficial for balancing the overachieving pitta nature.

Experience for Kapha

The compact kapha frame will enjoy the free abdominal movement without any physical or mental restrictions.

Physical Benefits

- Improves movement of oxygen and carbon dioxide throughout the body.
- Relaxes and recharges the nervous system.

Experience for Vata

Notice your hands rising as your lungs fill with air.

Experience for Pitta

Breathe in to fill the lungs.

Experience for Kapha

Breathe out to empty the lungs.

Your hands descend as your lungs empty.
THE YOGIC BREATH

Full yogic breath

This technique uses all of your respiratory muscles, improving your muscle strength when moving into, holding, and releasing asanas. Performing it between asanas quickly replenishes the oxygen levels in the blood – you might want to try a few full yogic breaths at work to boost your energy levels.

1 Sit in a comfortable, cross-legged position. Place one hand on your chest and the other on your abdomen. As you inhale, gradually expand your abdomen, raise and open your rib cage, and lift your collar bones.

Feel your upper hand rise as you breathe in.

Keep your shoulders relaxed as you breathe in.

You may want to sit on a cushion to improve your spine alignment and release tension from your knees.

2 Start exhaling by relaxing the abdomen, then lower the rib cage, and, finally, slightly contract the abdomen to empty the lungs. Repeat the steps for about 2 minutes.

Keep your head, neck, and spine aligned.

Always start exhaling from the abdomen.

THE SOLAR PLEXUS

This network of nerves located behind the stomach, the solar plexus, is said to function without voluntary control. However, the yogis have discovered that conscious, slow, rhythmical abdominal breathing does have a direct effect on the solar plexus, helping it to balance its three major functions:

- When stimulated, the solar plexus brings sensory awareness to the entire abdominal area. This sensitivity can be used to discover hidden tensions in the body.
- Abdominal breathing generates a natural defence against stress, especially when it is combined with alternate nostril breathing (see pp.126–27) or lung purification (see pp.128–29).
- Finally, nerve impulses created in the solar plexus by slow abdominal exhalations during breathing, asanas, and relaxation exercises stimulate “rest and repair” throughout the body.

The solar plexus is located behind the stomach.
ALTERNATE NOSTRIL BREATHING

Alternate nostril breathing requires deep inhalation, prolonged breath retention, and deep exhalation. The flow of air alternates between both nostrils during the exercise.

Simple alternate nostril breathing

Attempt this exercise first when practicing alternate nostril breathing. Use the mudra hand position, shown in step 1, to close your nostrils. Practice ten rounds of the steps. Gradually increase the inhalation-to-exhalation ratio as you feel comfortable doing so, moving on from 5 seconds to 10 seconds, then 6 seconds to 12 seconds, and finally 7 seconds to 14 seconds.

1. Bend your right arm at the elbow and bring your hand close to your nose. Then, bend your index and middle fingers, gently pressing them against the palm of your hand.

2. Closing your right nostril with your thumb, inhale through your left nostril for 4 seconds. Close your left nostril with your ring finger, open your right nostril, and exhale for 8 seconds.

PHYSICAL BENEFITS

- **Long inhalations** increase oxygen levels in the blood.
- **Long exhalations** allow for good elimination of carbon dioxide.
- **Breath retention** strengthens the nervous system.
“Pranayama harmonizes the nerves and awakens the life force.”

SWAMI SIVANANDA

3

Inhale through your right nostril for 4 seconds. Then, close your right nostril, open your left nostril, and exhale through it for 8 seconds.

Press with the ring finger.

INTERMEDIATE VARIATION

Once you have mastered the 7:14 ratio of the simple alternate nostril breathing, try adding breath retention.

1. Inhale through your left nostril for 4 seconds, close the nostril, hold your breath for 8 seconds, then exhale through your right nostril for 8 seconds.

2. Inhale through your right nostril for 4 seconds, hold your breath for 8 seconds, and exhale through your left nostril for 8 seconds.

3. Practice up to ten rounds. Increase the inhalation-to-retention-to-exhalation ratio to 5:10:10, then to 6:12:12, and finally to 7:14:14.

ADVANCED VARIATION

As you feel more comfortable performing a breath retention of 14 seconds, try holding your breath for a longer period.

1. Inhale through your left nostril for 4 seconds, hold your breath for 16 seconds, and then exhale through your right nostril for 8 seconds.

2. Inhale through your right nostril for 4 seconds, hold your breath for 16 seconds, and then exhale through your left nostril for 8 seconds.

3. Practice up to ten rounds. Increase the inhalation-to-retention-to-exhalation ratio to 5:20:10, then 6:24:12.
LUNG PURIFICATION

Called “kapalabhati” in Sanskrit (literally “shining skull”), this process increases oxygen levels in the blood. This benefits every body system so much that, when practiced regularly, the face shines.

1. **Sit in a** cross-legged position, with your back straight and your head erect. Sit on a cushion if necessary. Take two to three deep breaths, then begin.

2. **Actively exhale by** contracting your abdominal muscles quickly. This causes your diaphragm to move up into your chest cavity and forcefully push air out of your lungs.

   - **Feel your** diaphragm lift.
   - **Contract your** abdomen.
   - **Hold both** hands in chin mudra (see p.126).

3. **Passively inhale by** relaxing your abdominal muscles. This allows your diaphragm to descend into your abdominal cavity. Your lungs automatically expand and inflate with air. Do not inhale forcefully.

4. **Repeat steps 2 and 3** quickly in a pumping action. Perform 20–30 exhalations and 20–30 inhalations to complete a round, ending on an exhalation. Take two deep breaths, then hold your breath for 30–60 seconds. Perform three rounds. As your capacity increases, gradually lengthen the exercise to five rounds of 50–100 cycles.

**PHYSICAL BENEFITS**

- **Cleanses the** nasal passage, lungs, and respiratory system.
- **Increases carbon** dioxide removal and oxygen absorption.
- **Improves digestion** by massaging the abdominal organs.

**EXPERIENCE FOR VATA**

Holding the breath for a long period is a challenge for vata, and an opportunity to expand lung capacity.

**EXPERIENCE FOR PITTA**

The pitta body can hold its breath for the longest. This results in a meditative state that balances the sharp edge of the pitta nature.

**EXPERIENCE FOR KAPHA**

The kapha body is prone to respiratory congestion, which is quickly remedied by this exercise, giving a feeling of lightness.

**IMPORTANT NOTE**

Lung purification should not be practiced if you have any abdominal pain or cramping. Do not practice it late in the evening, since it activates the nervous system and may prevent you from falling asleep.
“While the act of pranayama is physical, the effect is to make the mind calm, lucid, and steady.”

SWAMI VISHNUDEVANANDA

3 **Passively inhale by** relaxing your abdominal muscles. This allows your diaphragm to descend into your abdominal cavity. Your lungs automatically expand and inflate with air. Do not inhale forcefully.

Let air flow in through your nostrils.

Feel your diaphragm descend.

Relax your abdomen.

4 **Repeat steps** 2 and 3 quickly in a pumping action. Perform 20–30 exhalations and 20–30 inhalations to complete a round, ending on an exhalation. Take two deep breaths, then hold your breath for 30–60 seconds. Perform three rounds. As your capacity increases, gradually lengthen the exercise to five rounds of 50–100 cycles.

**IMPORTANT NOTE**
Lung purification should not be practiced if you have any abdominal pain or cramping. Do not practice it late in the evening, since it activates the nervous system and may prevent you from falling asleep.
NECK EXERCISES

These exercises warm up your neck, shoulders, and upper back areas, aiming to reduce tension and stress. While performing them, move only your head and neck, and not your back and shoulders.

1. **Keeping your back** straight, slowly allow your head to move forward and down until your chin is resting on your chest. Relax in this position. Feel as though your head is very heavy.

   - **Allow your neck to stretch without straining.**

   - **Rest your chin on your chest.**

2. **Lift your head** up and lower it backward, as if trying to put the back of your head on to your spine. Repeat the first two steps six to ten times.

   - **Tilt your head all the way back.**

   - **Reduce the angle of your head position if you feel any dizziness or discomfort.**

**EXPERIENCE FOR VATA**
These simple movements will help the vata body shift into the slow-motion mode of movement required for the asanas.

**EXPERIENCE FOR PITTA**
Those of a pitta nature should not exaggerate the movements too much, as these exercises are only intended to relax the neck.

**EXPERIENCE FOR KAPHA**
The kapha body and mind will enjoy these easy movements, and be encouraged to explore the next steps of the session.

**PHYSICAL BENEFITS**
- **Warms up** neck and shoulders.
- **Helps to** relieve tension in the neck and upper back area.
- **Improves neck alignment,** improving physical and mental well-being.

"May all beings everywhere be free and happy."

UNIVERSAL INDIAN PRAYER

NOW MOVE ON TO SUN SALUTATION
3. **Keeping both shoulders** down, tilt your head to the right, as if trying to bring your ear down to your shoulder. Then stretch to the left side. Repeat this step five to ten times.

4. **Keeping your body** still, turn your head so that your chin is over your right shoulder. Feel the stretch on your left side, then turn your head over your left shoulder. Repeat six to ten times.

5. **Rotate your neck** and head clockwise two to three times—head forward, chin to chest, right ear to right shoulder, head back, left ear to left shoulder, head forward. Then repeat the rotation counterclockwise two to three times.

“May all beings everywhere be free and happy.”

UNIVERSAL INDIAN PRAYER
THE SUN SALUTATION

Begin your session with this excellent warm-up exercise that improves the muscle efficiency for the other asanas. Perform four to six cycles, then rest in corpse pose (see pp.160–61).

1. Stand with your head and body straight but relaxed, and your arms relaxed by your sides. Inhale deeply, and then begin. Exhale, bringing your hands together at the center of your chest with your palms flat against each other. Keep your head upright.

2. Inhale, stretch your arms up over your head and arch your body backward, stretching your chest and abdomen. Your arms should finish the movement alongside your ears. Keep your knees and elbows straight, and your hips arched slightly forward.

EXPERIENCE FOR VATA
These gently flowing movements are attractive to those of a vata nature, as they have the desire to constantly be moving.

EXPERIENCE FOR PITTA
This exercise suits the balanced pitta nature because it is a systematic workout for both muscle length and strength.

EXPERIENCE FOR KAPHA
Movement is not in kapha’s nature, so this exercise may be resisted initially. However, it will bring an enjoyable tension release.

PHYSICAL BENEFITS
- Stretches dozens of muscles throughout the body.
- Quickly warms up the body, improving muscle flexibility.
- Regulates the breathing and increases lung capacity.
3 **Exhale, bend forward**, and place your hands on the floor next to your feet. Try to keep your knees as straight as possible, but bend them a little if you need to.

- **Tuck your** head into your knees.
- **Ensure that** your hands are flat and your fingers and toes are aligned.

4 **Inhale, stretching your** right leg back as far as possible without moving your hands. Drop your right knee to the ground, release your toes, and stretch your head up. (Alternate between stepping back with your right and left leg on each cycle.)

- **Keep your** hands flat on the floor next to your feet.
- **Avoid twisting** your hips.

5 **Holding your breath**, bring your other leg back so that your body is straight from the head to the heels (push-up position). Avoid lifting the hips or dropping the head.

- **Don’t drop** your head.
- **Avoid lifting** the hips.

“The connection between the breath and muscle control can be felt in all 12 poses of the sun salutation.”
Exhale, tuck your toes under, and bring the hips up as high as possible without moving your hands or feet. Push your heels toward the floor and keep your hands flat on the ground. Don’t worry if you can’t put your heels on the floor – this is due to tight hamstrings.

Inhale, lower your hips to the mat, arch your head and upper spine backward, and look up. Your elbows should be slightly bent, and your shoulders relaxed and away from your ears.

Exhale, and without rocking backward, lower your knees, chest, and forehead to the floor. Keep your hips and abdomen raised slightly, and your toes curled under.

Inhale, stretch up, and arch backward (the same as step 2). Make sure that you don’t drop your head below your arms, as this causes undue pressure on your back. Keep your knees straight.

Exhale, bringing your arms forward and down alongside your body, returning your body to the starting position. Relax for a moment, and take a deep breath so that you are ready to begin the next cycle.

Inhale, bringing your right foot forward between your hands. Drop your left knee to the floor and stretch your head up. Look up, extending your neck and upper back. (Alternate between stepping forward with your left and right leg on each cycle.)

Push your hips back as far as possible. Your hips should remain off the floor.

Avoid putting too much pressure on your lower back. Your hips should remain off the floor.

Don’t walk forward to make your heels touch the floor.

Ensure your arms are alongside your ears. Return to the starting position. Keep your hips as high as possible.

Ensure your fingers and toes are aligned. Your arms and hands should be relaxed.

Keep your elbows straight.

Keep your head between your arms.

Keep your hands flat on the ground.
9 **Inhale, bringing your** right foot forward between your hands. Drop your left knee to the floor and stretch your head up. Look up, extending your neck and upper back. (Alternate between stepping forward with your left and right leg on each cycle.)

10 **Exhale, keeping your** hands in place, then bring your left foot forward so it is next to your right foot. Straighten both legs as much as possible and bend down so that your head tucks into your knees (like step 3).

11 **Inhale, stretch up,** and arch backward (the same as step 2). Make sure that you don’t drop your head below your arms, as this causes undue pressure on your back. Keep your knees straight.

12 **Exhale, bringing your** arms forward and down alongside your body, returning your body to the starting position. Relax for a moment, and take a deep breath so that you are ready to begin the next cycle.
SINGLE LEG LIFT

This exercise will gently help you overcome stiffness in your calves and hamstrings, preparing you for the forward bending asanas that stretch all of the muscles at the back of your body.

1. Lie on your back with your feet together and place your hands palms down on the floor by your sides.

2. Inhale as you bring your right leg perpendicular to the floor. Exhale as you lower your raised leg, ensuring that your other leg remains straight. Repeat with your left leg. Do three to five sets and, on the last set of leg raises, follow step 3.

3. Inhale as you raise your right leg and, clasping it in both hands, pull it toward you, keeping your head down. Hold the position for a few breaths.

4. Exhale, now holding your right foot in both hands, as you lift your back off the mat, bringing your chest and head toward your raised leg.

5. Inhale, lowering your head and back to the mat as you bring your right leg over your head. Then, exhale and lower your leg and arms back to their starting position. Repeat on the other side.

PHYSICAL BENEFITS
- Improves flexibility of and relieves tension in the calf and hamstring muscles.
- Strengthens the abdominal and lower back muscles.

EXPERIENCE FOR VATA
The vata body has a temperamental and excitable nervous system that will be soothed by this slow hamstring stretch.

EXPERIENCE FOR PITTA
The pitta nature has a drive for movement and perfection that will be satisfied by stretching out the hamstrings in this way.

EXPERIENCE FOR KAPHA
Those of a kapha nature will enjoy the feeling of lightness in the legs provided by this exercise.

Keep your head centered.

Use slow abdominal breathing (see p.124).

Your toes should point toward your head.

Keep your raised knee straight.

Try not to press your leg or arms into the floor to raise your leg.

Inhale as you bring your right leg perpendicular to the floor. Exhale as you lower your raised leg, ensuring that your other leg remains straight. Repeat with your left leg. Do three to five sets and, on the last set of leg raises, follow step 3.
WORKING TOWARD SINGLE LEG LIFT

If you find the exercise too strenuous for your back, bend your other knee before raising your leg.

3 **Inhale as you** raise your right leg and, clasping it in both hands, pull it toward you, keeping your head down. Hold the position for a few breaths.

4 **Exhale, now holding** your right foot in both hands, as you lift your back off the mat, bringing your chest and head toward your raised leg.

5 **Inhale, lowering your** head and back to the mat as you bring your right leg over your head. Then, exhale and lower your leg and arms back to their starting position. Repeat on the other side.

Push your leg into the mat.

Bend your other knee to reduce the intensity of the stretch.

Avoid bending the raised knee.

Keep your other leg flat on the floor.

Hold your leg if you are unable to reach your foot.

Pull your leg toward you.

Relax your neck and shoulders.
SHOULDERSTAND

This is the first of two inverted asanas performed in the session. Inversion is equally challenging for all three doshas. Follow shoulderstand with plow and then its counterpose – fish.

1 Lie flat on your back with your feet together. Stretch your arms behind your head to make sure that there is enough space. Then, keeping your back, head, and neck on the mat and your arms by the side of the body, inhale and lift your legs to a 90-degree angle.

• Stretches away stress in the shoulder and neck area.
• Tones and revitalizes the thyroid and parathyroid glands.
• Strengthens the heartbeat and improves blood flow to the brain.

PHYSICAL BENEFITS

EXPERIENCE FOR VATA

Those with a vata nature find it difficult to stay still. This must be overcome to maintain good balance during this inversion.

EXPERIENCE FOR PITTA

It may take time for those of a pitta nature to establish the unfamiliar muscular interplay required to hold the inversion.

EXPERIENCE FOR KAPHA

It may be difficult to raise the heavy kapha body into the inversion, but once achieved, maintaining the position will be easier.

“[This inverted asana creates a flow of energy that gathers in the solar plexus.]”
“Focusing on breathing during asanas reduces fatigue by allowing increased amounts of oxygen to be supplied to the muscles.”

2 **Bring your hands** to your buttocks and gently push the body up by walking your hands toward your lower back. Breathe slowly into your abdomen and relax your feet and legs as much as possible. Keep most of your weight on your elbows and very little on your neck and shoulders.

3 **To come down** from the pose, place your hands palms down on the mat behind your back, then slowly roll down, vertebra by vertebra.

**INTERMEDIATE VARIATION**

From step 2, continue lifting your body until your legs are in a straight line with your torso. Your shoulders and elbows should support your weight. From time to time, readjust your body by bringing your hands closer to your shoulders, and your elbows a bit closer to each other. To come down from the pose, return to the position in step 2, and then follow step 3.
**PLOW**

This is a natural continuation of the forward-bending movement of shoulderstand. If you are more experienced performing this asana, move straight into it from shoulderstand.

**PHYSICAL BENEFITS**
- **Stretches the** back muscles completely, mobilizing the spine.
- **Releases tension** in the shoulder and neck muscles.
- **Improves digestion** and combats constipation.

**EXPERIENCE FOR VATA**
Breathing in this asana can be difficult with a narrow vata ribcage. Those of a vata nature should breathe slowly and deeply before starting.

**EXPERIENCE FOR PITTA**
With over half of the body’s weight on the sensitive neck muscles, those with a pitta nature should avoid ambition and apply the stretch gradually.

**EXPERIENCE FOR KAPHA**
If breathing becomes difficult, those with a kapha nature should hold plough for only a few breaths. Then rest and repeat.

1. **Lie on your** back, with your legs together and your arms by your sides. Inhaling, lift your legs, pelvis, and lower back into shoulderstand (see pp.138–39). Firmly support your back with both hands.

2. **As you are lifting** your back, continue the movement with steady breathing, and bring your legs over your head.

**NOW MOVE ON TO FISH**

**PHYSICAL BENEFITS**
- **Stretches the** back muscles completely, mobilizing the spine.
- **Releases tension** in the shoulder and neck muscles.
- **Improves digestion** and combats constipation.

**EXPERIENCE FOR VATA**
Breathing in this asana can be difficult with a narrow vata ribcage. Those of a vata nature should breathe slowly and deeply before starting.

**EXPERIENCE FOR PITTA**
With over half of the body’s weight on the sensitive neck muscles, those with a pitta nature should avoid ambition and apply the stretch gradually.

**EXPERIENCE FOR KAPHA**
If breathing becomes difficult, those with a kapha nature should hold plough for only a few breaths. Then rest and repeat.
“The weight-bearing forward bend of plow keeps your spine supple.”

**INTERMEDIATE VARIATION**

*If you are able* to touch the ground with your feet when you are performing step 3, lower your arms to the floor behind your back to go into the full position.

3 **Keeping your legs** straight and toes flexed, stretch your feet down toward the floor behind you. If your feet touch the ground, lower your arms to the floor behind your back. Release the pose by rolling down vertebra by vertebra, with your arms pushing against the floor for balance.

- **Try to keep** your spine straight.
- **Keep your** arms as close to each other as possible.
- **Make sure** your legs are together.
- **Your back** should still be supported with your hands.
- **Keep your** toes pointed toward your head.
- **Keep your** weight on your elbows.

Now move on to Fish.
FISH

This counterpose should follow shoulderstand and plow. It relieves any congestion or tension that may have been caused by the previous two positions, and opens the chest for deep breathing.

1. Lie down on your back with your legs and feet together. Keeping your knees straight, place both arms under your body. Your hands should be as far as possible under your thighs (palms down) and your elbows as far as possible under your back.

PHYSICAL BENEFITS
- Corrects any tendency to hunch the shoulders.
- Develops lung capacity.
- Relieves tension and congestion in the lungs.

EXPERIENCE FOR VATA
This asana is ideal for expanding the narrow rib cage of the vata body, allowing for greater prana (vital energy) capacity.

EXPERIENCE FOR PITTA
There is a natural limit to this stretch, which makes it ideal for slowing down and relaxing the sharp and ambitious pitta nature.

EXPERIENCE FOR KAPHA
The fish has a decongestant effect that can help clear any build-up of mucus—a common occurrence in the kapha body.

EXPERIENCE FOR VATA

EXPERIENCE FOR PITTA

EXPERIENCE FOR KAPHA
“Observe how the asanas have a rhythmical alternation between effort and relaxation, pose and counterpose.”

**NECK STRETCH**

After fish, practice this pose to release any tension in your neck. Interlock your fingers behind your head and hold your forearms close to your ears. Then, inhale and lift your head, pushing your chin into your chest. On an exhalation, slowly lower your head back to the mat.

2 Push your elbows into the ground by bending them. Use them to support your weight and lift your chest until you are half sitting up.

3 If you can manage to, slowly move your head back until it is touching the ground and your chest is expanded. To come down from the pose, lift your head slightly, lower your back to the ground, and relax in corpse pose (see pp.160–61). Slowly roll your head from side to side once or twice, then bring it back to the center.

Avoid moving your torso off the floor.

Keep your legs straight and side by side.

Ensure your chest is as high as possible.

Keep your weight on your elbows.

Make sure you keep your feet together.

NOW MOVE ON TO SITTING FORWARD BEND
SITTING FORWARD BEND

The sitting forward bend stretches all of the muscles at the back of the body – from toe to neck – and provides an abdominal massage. Perform its counterpose, inclined plane, afterward.

**PHYSICAL BENEFITS**
- **Restores flexibility** to the leg and back muscles.
- **Helps to** correct an exaggerated lower back curve.
- **Tones the** digestive organs and helps to regulate the pancreas.

**EXPERIENCE FOR VATA**
Those of a vata nature will find that holding the forward bend will be a helpful exercise to balance their often fidgety nature.

**EXPERIENCE FOR PITTA**
Athletic pitta bodies often have tight hamstrings. The deep leg stretch of the forward bend can therefore be a challenge.

**EXPERIENCE FOR KAPHA**
This exercise is both meditative and stimulating, so will prove a rewarding experience for the stationary kapha nature.

1. **Sit up straight**, keeping your legs together and straight out, with your toes pointing upward. Inhale, stretching both arms up over your head, parallel to your ears. Stretch your spine upward as much as possible.

   - Align your arms with your ears.
   - Keep your back straight.
   - Point your toes toward your knees.

   **INTERMEDIATE VARIATION**

   Retaining the stretch and pulling the abdomen in, exhale and fold forward from the pelvis, leading with the chest and keeping your back straight.

   **NOW MOVE ON TO INCLINED PLANE**

   Keep your feet pointing upwards.
2 Retaining the stretch and pulling the abdomen in, exhale and fold forward from the pelvis, leading with the chest and keeping your back straight.

3 Bend forward until your hands reach either your shins, ankles, or feet, and stretch your head and spine forward as much as possible. Let your elbows hang loose to release tension in your neck and shoulders. Breathe slowly and deeply. Visualize the top of your head moving toward your feet.

INTERMEDIATE VARIATION

If you are comfortable in step 3, try to bring your abdomen as close to your thighs as possible. Make sure that you keep your knees as straight as possible.
INCLINED PLANE

As a counterpose to the sitting forward bend, inclined plane contracts and strengthens the same muscles that were stretched in sitting forward bend. Relax in corpse pose afterward.

1 Sitting on the floor with your legs stretched straight out, place your hands flat behind you with your fingers pointing backward. Lean back slightly on your hands and take a few deep breaths. Release your head backward and try to bring your shoulder blades together.

**PHYSICAL BENEFITS**
- Improves ability to maintain balance.
- Strengthens the lower back, leg, and arm muscles.

2 Lifting your hips as high as possible, try to push your feet flat into the floor, keeping them together if possible. Your knees should be straight, and your body in a straight line. Beginners should hold the position for 10 seconds; gradually increase the time held to 1 minute.

**EXPERIENCE FOR VATA**
The vata body makes the inclined plane relatively easy to enter. However, those with a dominant vata will find holding the pose more difficult.

**EXPERIENCE FOR PITTA**
Those of a pitta nature should attempt to hold this pose a little longer than comfortable in order to explore their strength and willpower.

**EXPERIENCE FOR KAPHA**
Extra motivation may be needed for those of a kapha nature to get into the pose, but their naturally strong wrists should help maintain it.

Relax your neck.

Your hands should be about 12in (30cm) behind you.

Keep your hands, arms, and shoulders in vertical alignment.
INTERMEDIATE VARIATION
Starting from step 2, inhale and lift your left leg straight up. Exhale, and lower your leg, then repeat the action two more times. Repeat three times on the other side.

Your hands and shoulders should be vertically aligned.

Arms out on either side of your body.

Keep your knees straight.

Try to keep your feet from turning outward.

Make sure your feet stay within the shoulder-width.

Keep your foot flat on the mat.

Your feet should be shoulder-width apart.

To release the position, sit down on the ground and shake out your wrists. Stretch your arms straight out in front and slowly roll down onto your back. Relax in corpse pose (see pp.160–61).

“Hold the asana comfortably but firmly. This requires finely tuned muscle control.”
COBRA

Visualize the smooth, supple movement of a snake as you slowly stretch your spine up and back, vertebra by vertebra. Cobra should be followed by child’s pose.

1. Lie on your front with your legs together. Bring your forehead to the ground. Place your hands flat on the floor, palms downward. Make sure your fingertips are in line with the top of your shoulders.

Point your toes away from you.

2. Bend your elbows so that they are in toward your body and point slightly upward.

PHYSICAL BENEFITS
- Rejuvenates the nerves and muscles of the spine.
- Alleviates menstrual pains.
- Relieves kyphosis — excess curvature of the upper spine.

“YOU ARE AS YOUNG AS YOUR SPINE IS FLEXIBLE.”

CHINESE PROVERB

EXPERIENCE FOR VATA

Those with a vata body should take care not to compensate for a lack of mobility in the upper back by putting pressure on the lower back.

EXPERIENCE FOR PITTA

Those with a pitta body have superior arm strength, but should make sure their elbows remain close to the body near the kidneys.

EXPERIENCE FOR KAPHA

For added motivation, those of a kapha nature should visualize how well this asana stretches the chest and strengthens the upper back.
**INTERMEDIATE VARIATION**

After step 2, push your hands into the floor, raising your head and chest high off the ground. Feel the pressure travel downward through your cervical, thoracic, and lumbar areas to your sacrum. Keep your hips and legs on the ground. Your elbows should remain slightly bent and your shoulders down, back, and away from your ears. Then, leave the asana as described in step 2.

1. **Inhale, and begin** to roll your head up and back. Curve the spine according to the strength of your back muscles. If you feel any pain, reduce the effort so that your spine bends less, remaining at a comfortable level of extension. Exhale as you roll slowly out of the posture. Uncurl your back first, keeping your head back until last and end up with your forehead on the ground.

   - Avoid moving your hips off the mat.
   - Keep your legs together.
   - Put pressure on your hands.
   - Extend your neck.
   - Keep your shoulders away from your ears.

NOW MOVE ON TO
CHILD’S POSE
CHILD’S POSE

A counterpose to the backward stretch of cobra, child’s pose brings a refreshing flow of blood to the brain, providing rejuvenation before you move on to camel pose.

**EXPERIENCE FOR VATA**
This passive forward bend naturally increases rest and relaxation in the nervous system, so is particularly important for vata.

**EXPERIENCE FOR PITTA**
This asana represents humility. Those of a pitta nature should extend their exhalations and enjoy relaxing in this position.

**EXPERIENCE FOR KAPHA**
Those with particularly compact kapha bodies may feel more comfortable in the asana if they keep their knees apart.

1. **Sit on your** heels with your knees slightly apart, lean forward, and fold your arms on the floor in front of you, allowing your buttocks to rise off your heels. Rest your forehead on your folded arms. Breathe slowly and comfortably.

2. **Extend your arms** alongside your legs and rest your hands beside your feet, palms facing upward. Lean forward until your forehead touches the floor. Take at least eight deep, rhythmical breaths before progressing to camel.

**PHYSICAL BENEFITS**
- Stretches the muscles in the back and around the hips.
- Gently stretches the spine.
- Relaxes the head and shoulders.
CAMEL

This asana stretches your chest and throat muscles, while also strengthening your hamstrings and glutes. Relax in child’s pose for at least eight breaths afterward.

1. **Kneel on the mat** with your knees and feet hip-width apart, arms by your sides. Breathe slowly and rhythmically.

2. **Support your back** with both hands. Inhale and slowly bend backward, your head back first, then your shoulders and chest, and finally your lower back. Hold for up to 30 seconds, breathing slowly and rhythmically.

3. **Leave the pose** by inhaling, contracting your abdomen, and lifting your torso back up.

**PHYSICAL BENEFITS**
- **Stretches the** throat and chest muscles.
- **Strengthens the** hamstring and glute muscles.

**EXPERIENCE FOR VATA**

Aided by their flexible nature, those with a vata body should attempt to enter and leave the asana smoothly and gracefully.

**EXPERIENCE FOR PITTA**

The pitta body has strong thighs and glute muscles to resist the powerful backward pull of gravity in this asana.

**EXPERIENCE FOR KAPHA**

This asana naturally enhances breathing. This may clear accumulated mucus, something the kapha body is prone to.
**TREE**

Tree is the first of the balancing poses, which all require concentration and single-mindedness to maintain. To help you find your point of balance, move your weight between your heel and toes.

1. **Stand up straight**, focusing on a spot in front of you for balance. Breathe slowly from your abdomen. Lift your left foot and place it against your right thigh.
2. **When you feel** secure in your balance, release the hold on your foot and place your hands in front of your chest, palms together. Continue breathing rhythmically.

**PHYSICAL BENEFITS**
- Strengthens both the legs and feet.
- Promotes a strong upper back and an open rib cage.

** EXPERIENCE FOR VATA**
Balancing in the tree asana naturally slows down the sometimes accelerated impulses of the vata nature.

** EXPERIENCE FOR PITTA**
Those with a pitta body may find this pose too easy, so can add complexity by attempting to maintain balance with one eye closed.

** EXPERIENCE FOR KAPHA**
Practicing balance exercises brings a lightness to the body that is especially useful to the heavy kapha nature.

Open your chest.

Keep lifting your bent leg.

If you cannot raise your foot to the top of your thigh, raise it as high as you can, avoiding the knee.

Keep your standing leg firm to maintain balance.

Distribute your weight evenly on your standing foot.
3 With an inhalation, slowly lift your arms. Hold the pose for up to 1 minute. Release, then repeat on the other side.

Hold your arms up beside your ears.

Continue to keep your standing leg firm to maintain balance.

Point your left knee outward.

Distribute your weight evenly on your standing foot.

Keep your palms pressed together.

Palms pressed together as in beginner variation.

Keep the foot of the bent leg firmly on top of the other thigh.

If you are confident performing the tree pose, try doing so in half lotus position. Use your hands to position your foot as with the beginner variation, and, once comfortable, lift your arms above your head with your palms flat together. Hold for up to 1 minute, breathing rhythmically, then release and repeat on the other side.

NOW MOVE ON TO CROW
CROW

The more challenging of the balancing asanas have long been used by yogis to build muscle strength. Crow is a perfect example of this type of strength-building exercise.

1. **Squat with your** legs and feet apart. Move your shoulders in front of your knees and your palms onto the mat in front of you. Spread your fingers wide apart, turn your wrists inward, and bend your elbows out. Breathe slowly and rhythmically.

   - Look straight ahead.
   - Your arms should be slightly apart and bent slightly.

2. **Bring your weight** up onto your toes, raising your hips as much as possible with your knees pressed firmly against your upper arms. Look straight ahead and continue breathing rhythmically into your abdomen.

   - Lift your head slightly.
   - Bend your elbows slightly.

**PHYSICAL BENEFITS**
- **Strengthens the** arms, wrists, and shoulders.
- **Stretches the** muscles of the fingers, wrists, and forearms.
- **Improves sense** of balance.

**EXPERIENCE FOR VATA**
Those with the light and agile vata body should find this pose easy unless they have particularly delicate wrists.

**EXPERIENCE FOR PITTA**
Those with a pitta body should try to extend their elbows a bit more and hold the asana a little longer each session.

**EXPERIENCE FOR KAPHA**
With the naturally strong joints of the kapha body, those with dominant kapha may find this asana easier than they expect.
“The body follows the mind.”

SWAMI SIVANANDA

INTERMEDIATE VARIATION

If your wrists are strong enough, try the full pose. Starting from step 3, inhale, hold your breath, then slowly move your weight forward until your feet lift off of the floor. Balance for a few seconds, then exhale and return to step 2. Once you can, hold the pose for 30 seconds while breathing rhythmically.

3 Breathing more deeply, focus on a point in front of you, then, slowly move forward, shifting your weight away from your feet and on to your wrists. Your elbows should be slightly bent and your knees should rest on your upper arms. Hold for a few moments, then exhale and return to a squatting position.

Take most of your weight off your feet.

Lift your head.

Hold your weight on your arms.

Rest your knees on your upper arms.
SPINAL TWIST

The lumbar area of the spine does not twist easily, so you will mostly rotate the chest and neck areas. Keeping your chest open and your neck straight is the best basis for a good twist.

1. Sit upright with your legs together straight out in front of your body. Then, bend your left knee and put your left foot flat on the floor, just outside your right calf.

2. Bring your left arm to the floor behind your back and raise your right arm directly upward.

PHYSICAL BENEFITS
- Promotes elasticity in the spine.
- Improves blood circulation to the roots of the spinal nerves.
- Helps to relieve constipation and other digestive problems.

EXPERIENCE FOR VATA
The spinal twist releases pressure from the spinal nerve roots, which can help to improve vata types’ light sleep.

EXPERIENCE FOR PITTA
As the spinal rotation requires many types of muscles, this asana proves a delightful workout for ambitious pitta types.

EXPERIENCE FOR KAPHA
The number of muscles used means that this asana requires patience to do correctly, which suits the kapha nature.
“The practice of asanas gives physical, mental, and spiritual strength.”

SWAMI VISHNUDEVANANDA

INTERMEDIATE VARIATION

From a kneeling position, sit up on your heels and then drop your bottom to the floor to the right of your heels.

1. Raise your left leg over your right leg, place your left foot on the mat just outside your right knee, and bring your right heel close to your buttocks.

2. With your left hand flat on the floor behind your back, raise your right arm up.

3. Use this arm stretch to help lengthen the spine.

Keep the head, neck, and spine in alignment.

Continue to keep your head, neck, and spine aligned.

Pull with the left arm to allow the chest to turn farther.

3. Bring your right arm around the outside of your left leg and hold your calf, ankle, or foot, depending on your flexibility. Turn your chest, head, and eyes to the left. Hold the pose for at least 30 seconds, release, then repeat on the other side.

3. With your right arm over your left knee, reach around to hold your left ankle and look over your left shoulder. Breathe deeply and rhythmically.
TRIANGLE

The triangle provides a unique combination of balancing, strengthening, and stretching. It is the final asana in the session, so move on to the final relaxation part of the session when completed.

1. **Stand with your** legs about twice shoulder-width apart. Turn your left foot outward and align it with the instep of your right foot. Your head, chest, and spine should all be straight, with your entire body facing forward.

   - **Your head** and shoulders should be centered.
   - **Breathe slowly** and deeply.
   - **Distribute your** weight evenly on both feet.

2. **Inhale, bring your** right arm up parallel to your right ear, ensuring that it is straight. Feel the stretch along your right side, as though your arm is being pulled up from your waist. Rest your left hand on the outside of your left thigh.

   - **Keep your** hips square.
   - **Concentrate on** the stretch between your foot and your raised hand.

**PHYSICAL BENEFITS**
- Tones the spinal nerves and abdominal organs.
- **Promotes flexibility** in the legs and the hips.
- **Improves sense** of balance.

**EXPERIENCE FOR VATA**
This asana is ideal for the vata body, as it requires balancing while concentrating on deep, controlled breathing.

**EXPERIENCE FOR PITTA**
The triangle works out the muscles on many levels, making it particularly appealing to pitta’s ambitious nature.

**EXPERIENCE FOR KAPHA**
The kapha body provides natural endurance to allow enjoyment of this asana’s requirement for balance and strength.
Make sure some weight remains on your back foot.

Your hips, trunk, and arm should be horizontally aligned.

Bend your left knee to reduce the intensity of the stretch.

Look up, turning your face forward.

3 Retaining this stretch, exhale and bend to the left. Slide your left hand down your left leg without twisting your body. Make sure your arms and knees remain straight, and that there is no weight on your lower arm. Keep your right arm against your right ear, without turning your head. Hold this position for up to 1 minute, then repeat on the other side.

“One gram of practice is better than many tons of theory.” — SWAMI SIVANANDA
ACTIVE RELAXATION

Short, active muscle contractions followed by a sudden and complete muscular release will remove many hidden tensions in the body. The following active relaxation exercises should be performed as the first part of the final relaxation.

Performing corpse pose

Lie flat on your back with your arms and legs slightly apart and relaxed. Try to align your body in a symmetrical way. Allow your back to touch the floor, and keep your legs straight, but not tensed. Relax your toes and allow your feet to drop naturally out to the sides.

Place your arms at a 45-degree angle away from your body, with your hands relaxed, your palms facing upward, and your fingers slightly curled. Close your eyes. Your entire body should be completely relaxed.

Focus on abdominal breathing, following the rise and fall of your abdomen with each inhalation and exhalation. Allow your breath to move quietly through your nose.

1. Inhale and lift your right leg 2 in (5 cm) off the floor. Hold your breath and focus on your muscles as you hold them up. Exhale as you drop your leg to the floor. Take a slow breath and feel the deep relaxation in your leg. Repeat with your left leg.

2. Inhale and lift both arms 2 in (5 cm) off the floor with clenched fists. Hold for a moment. Exhale, dropping your arms to the floor. Inhale, and lift your arms with open palms and fingers apart. Hold for a moment. Exhale, lower your arms, and relax.

“*The deeper your relaxation, the more your prana will be restored.*”
3. **Inhale, squeeze** your glutes, and lift your buttocks slightly off the floor. Hold your breath while they are raised, then exhale as you lower your buttocks back down to the floor.

4. **Inhale and lift** your chest. Hold your breath for a few seconds. Exhale, lower your chest and release your upper back down to the floor.

5. **Inhale and pull** your shoulders toward your ears. Hold your breath for a few seconds. Exhale as you release your shoulders.

6. **Inhale and squeeze** your face muscles tightly together. Hold your breath for a few seconds, then exhale and release.

7. **Inhale, open your** mouth, stick out your tongue, and look up. Hold your breath for a few seconds, exhale, and release.

8. **Inhale and gently** roll your head to one side. Exhale, and turn it to the other side. Repeat several times. Keep your head on the floor and your chin tucked slightly into your throat to allow your neck to relax more.

**Experience for Vata**
Protected during the asanas by the short periods of relaxation, the final relaxation will calm the delicate vata nerves.

**Experience for Pitta**
The sharp pitta nature becomes balanced by the natural meditative mood that is created by the final relaxation exercises.

**Experience for Kapha**
After final relaxation, those with dominant kapha experience a new feeling of lightness that can be maintained with pranayama.
RELAXATION USING AUTOSUGGESTION

Autosuggestion is the process of the physical body adopting an idea projected by the mind – in this case, the act of relaxing. Continue to lie in corpse pose (see p.160) while you perform these exercises; they are the final part of the session.

**Physical relaxation**

- **DURATION:** 7–10 minutes

  Take a few slow, rhythmic breaths using your abdomen. Follow this exercise with autosuggestion for 7–10 minutes.

  1. **Have a clear mental picture** of your feet and think about the downward pull of gravity. Send a mental command to your feet: "I am relaxing my feet, I am relaxing my feet, my feet are relaxed."

  2. **Move up your body**, each time visualizing the area you are focusing on, thinking about the pull of gravity and your rhythmic breathing, and sending a command to relax. Start with your ankles, then move all the way up to your scalp.

  3. **Finally, relax your internal organs**. Visualize the area, breathe slowly, and send the command to relax to one organ at a time. Start with your abdominal organs, then move up to your brain. Your subconscious conveys the command.

**Mental relaxation**

- **DURATION:** 1–2 minutes

  Mental tension caused by unnecessary worry uses more energy than physical tension. Use this process to release it.

  1. **During mental relaxation, breathe slowly** and rhythmically for 1–2 minutes and concentrate on your breathing.

  2. **Slowly your mind will become calm** and you will feel a kind of floating sensation, as if you are as light as a feather – you will feel peace and joy.

"Very little energy is consumed during relaxation. Thus a tremendous amount of energy is being stored and conserved." Swami Vishnudevananda
**Relaxation Using Autosuggestion**

The only way to remove all tension and worry is to achieve spiritual relaxation. This process is explained below.

1. **Imagine a quiet, crystal-clear lake** and visualize the movements of your thoughts and senses as ripples on the surface of the water.

2. **Gradually let these thought waves** subside so that all that remains is the deep abiding peace of the innermost Self, like seeing through the calm, clear water to the bottom of the lake.

**Finishing relaxation**

The final element of relaxation is the mantra, creating vibratory harmony in the body and mind.

1. **After a few minutes** of spiritual relaxation, the mind will naturally start to move again. Take a few deep breaths and start moving your arms and legs.

2. **Then, stretch out your arms** behind your head. Slowly sit up into a cross-legged position and finish the session by chanting the universal “OM” sound three times. This will help you to maintain physical, mental, and spiritual relaxation for the rest of the day.

“**Very little energy is consumed during relaxation. Thus a tremendous amount of energy is being stored and conserved.**”

SWAMI VISHNUDEVANANDA
MEDITATION

"The mind verily is restless, turbulent, strong and unyielding, O Krishna. I deem it as difficult to control as the wind." 

BHAGAVAD GITA
POSITIVE THINKING AND MEDITATION

“The mind verily is restless, turbulent, strong and unyielding, O Krishna. I deem it as difficult to control as the wind.”

BHAGAVAD GITA
AYURVEDA AND THE MIND

This chapter covers raja yoga, which uses positive thinking and meditation to help us calm our minds and focus on achieving a state of balance and peace. The three gunas provide insight into the functioning of our minds.

The three gunas

According to the Ayurvedic and yogic scriptures, the mind is a subtle energy field, and is continuously reacting to the information we receive from the physical senses. The three gunas—sattva, rajas, and tamas—are the three energies of the mind. They can be balanced using pranayama and asanas, and that balance can be deepened using mental exercises.

Keeping the mind healthy

As we condition our physical bodies through diet and exercise, our minds are conditioned by the information we receive, whether from friends, family, teachers, or culture, as well as through the type of food we eat (see “Sattvic diet,” pp.64–65). The nature of the mind is inherently sattvic—clear and harmonious. However, by experiencing negative thoughts and emotions, such as greed and fear, or eating an unhealthy diet, the mind loses its pure quality and becomes rajasic (restless and agitated) or tamasic (lethargic and resistant).

A person’s mental health depends on how much sattva has been developed in his or her mind. The predominance of rajas and tamas often leads to psychological problems. The goal of both yoga and Ayurveda is to make sattva the predominant guna in the mind. Positive thinking and meditation, both covered in this chapter, remove rajas and tamas, and increase sattva, calming and uplifting the mind.

SATTVA
(harmony and clarity)

This is the energy of harmony and clarity. It brings stability, contentment, and peace, as well as revealing truth, making us feel centered and strong. Sattva is dominant in a healthy mind. Under the influence of sattva, a person might be:

- adaptable
- eloquent
- enthusiastic
- positive
- courageous
- independent
- intelligent
- sympathetic
- calm
- contented
- devoted
- humble
THE GUNAS AND THE DOSHAS

Regardless of the dominant dosha(s) in a person’s constitution, he or she should always be attempting to increase sattva to keep the mind healthy. However, the doshas and gunas combine to affect personality. For example, a person with vata in their constitution may be enthusiastic when sattvic, anxious when rajasic, or depressed when tamasic.

RAJAS

This is the energy of movement, agitation, expansion, and passion. It is needed to bring change, but can delude us into thinking happiness is provided by external pleasures. Excess rajas causes hyperactivity, causing tension and fatigue. Under the influence of rajas, a person might be:

- anxious
- indecisive
- restless
- unreliable
- aggressive
- judgmental
- manipulative
- vain
- compulsive
- dependent
- jealous
- materialistic

TAMAS

This is the energy of inertia, contradiction, and darkness. It is the power of ignorance that makes us resist positive change and creates indifference to our own and other people’s well-being. In excess, it causes lethargy. Under the influence of tamas, a person might be:

- depressed
- dishonest
- prone to addiction
- submissive
- destructive
- dull
- hateful
- judgmental
- apathetic
- lethargic
MONITORING THE MIND

The mind is a subtle body influenced by the three gunas, and, like the physical body, must be cared for. This exercise helps you to monitor the state of your mind, and become more aware of the nature of the thoughts that enter it.

Staying motivated

At times, it is difficult to motivate ourselves to perform the daily practices that improve our health. Often this lack of motivation is caused by subconscious beliefs, placed in our minds by the information and conditioning we have received over our lifetimes. However, the knowledge of such beliefs, or even of our minds’ conditioning, is not enough to overcome these blockages. We must deeply and courageously look directly into our minds.

Deep introspection

This act of introspection is part of raja yoga. The first step is to develop an awareness that we are indeed conditioned, which we may only vaguely realize. Part of this conditioning may come from a distant past (even past lives, according to Ayurvedic and yogic philosophy), while the rest comes from the people who educated us, from our families and friends, and from the culture we were born into.

We must also become aware of our mental state—the predominance of rajas (agitation) and tamas (resistance). The more we engage in this work, the more we realize how important this awareness is, as our minds affect our physical bodies, too—the cells in the body are constantly under the influence of the thoughts in the mind.

DEVELOP AN AWARENESS OF YOUR MENTAL STATE

Sit comfortably in a quiet place with your eyes closed and your back straight. Take a few deep breaths, then begin.

1. **Relax** your mind. Concentrate on the present by focusing on your body and your breath.
2. **Shift** your mental focus within by visualizing an open space or a lake without waves.
3. **Try to observe** your mind, becoming aware of the quality and nature of your thoughts and emotions.
4. **If you see** any negative or disturbing thoughts, do not try to drive them out. Focus on your breathing.
5. **Visualize yourself exhaling** all of the negative thoughts in your mind.

Observe the nature of the thoughts that enter your mind. Consider whether they are sattvic (harmonious), tamasic, or rajasic.

“Be the witness of your thoughts. You will enjoy lasting peace.”

SWAMI SIVANANDA
Observe the nature of the thoughts that enter your mind. Consider whether they are sattvic (harmonious), tamasic, or rajasic.

“Be the witness of your thoughts. You will enjoy lasting peace.”

SWAMI SIVANANDA
THE MIND AND THE SELF

Ayurveda teaches us that we are not our minds, but rather a separate consciousness, also called the Self. This exercise will help you start to realize the separation between the mind and consciousness.

What is the Self?

Both yoga and Ayurveda teach that the root cause of disease is the failure to understand our true nature. We might think that we are a physical body with a mind – a personality – but this is not the case. We are consciousness – “the Self” – a silent witness that uses the mind to express itself in the world of forms.

Only once you realize that you are not your mind (in the same way that you are not your physical body) can you stop identifying with your mind’s moods and habits. The ultimate purpose of yoga and Ayurveda is not to control the mind, which is fighting a lost battle, but to dissolve its thoughts and content, so that we experience our true nature – pure consciousness – a state of ultimate bliss.

Knowing the theory behind the separation of the mind and the Self is easy, but a true realization takes a long time to achieve.

“When you meditate, some irrelevant thoughts may enter your mind. Ignore them. They will pass away.”

SWAMI SIVANANDA
By distancing ourselves from the thoughts that enter our minds, we can come to the realization that we are not our minds, but consciousness itself.

“I am universal space, and I was never limited by the body and mind.”

SWAMI VISHNUDEVANANDA
POSITIVE THINKING

Now that we have a picture of how the mind functions, we can examine the practices that pacify, balance, and uplift it by increasing sattva. The first of these is to dwell in positivity by having positive sensory experiences and positive thoughts.

Positive sensory experiences
Positive experiences leave a good impression in our minds, increasing our levels of sattva (harmony). Below are some examples of ways you can have external positive experiences. Try to do them as often as you can – maybe once a week or more.

- **Go on a woodland or countryside walk** by yourself. Connect to the five elements, such as the dense earth or the warm sun. Become aware of the infinite space all around you, and allow your mind to expand into its immensity.
- **Examine a beautiful work of art** that you are particularly drawn to in a gallery. Let your eyes feast on the richness of the colors and the power of the lines.
- **Listen to spiritual music**, such as mantra chanting recordings. Feel how this music has the power to pull your mind inside and put you in touch with the highest of all sounds, the silence of the soul.

We can also reduce the amount of rajasic and tamasic impressions we receive from the media by limiting our time on our phones or computers, or at least be selective about what we choose to watch or listen to.

“Thought is a dynamic force; it shapes your destiny. Entertain pure and noble thoughts always.”

SWAMI SIVANANDA
Positive thoughts

The second form of dwelling in positivity is through positive thinking. This exercise requires you to focus on improving the quality of your inner world, independent of outer circumstances. This is important, as dwelling on external desires keeps us in a state of wanting, which leads to a sense of emptiness and frustration. Only through building a positive inner world can we find lasting contentment.

HOW TO USE POSITIVE AFFIRMATIONS

Choose one or two positive affirmations, or use them all. Repeat them three times a day — when you wake, at a convenient time during the day, and before bed. Say them slowly and clearly, with determination, and in a relaxed state of mind, as if talking to a friend. Have no expectation of immediate results.

My will is pure and irresistible.

My heart is filled with gratitude toward life.

My mind is clear and calm like a lake without waves.

All is happening for my good, to make me strong and aware.

My heart is filled with compassion toward all beings.

I accept myself as I am.

I surrender to the Self within.

I am not the doer. I am an instrument in the hands of the divine.

I open myself to the light of my Higher Self.

I open myself to the guidance of my Higher Self (or God).
REFINING OUR VALUES

The practice of positive thinking goes deeper than using affirmations. The path of raja yoga encourages us to uplift our minds through the practice of positive attitudes toward both ourselves and others.

Gaining sattva with our actions

To develop sattva (harmony), we need to work on our character. For this, we must follow the principle of dharma, living the right way (see p.8). We need to realize that we are not separate from others, but part of a whole, and whatever we do to others, we do to ourselves. There are ten ethical practices that we can try to follow.

How to practice

Choose one of the practices described here and work with it systematically for 1 month. For example, you could work on “Do not harm” and do the following:

- **Count how many** times each day you indulged in violence (whether harsh words, anger, or harmful thoughts).
- **Reflect on** what behavior you could replace it with.
- **Think of** a person who exemplifies nonviolence.
- **Make the decision for yourself**: I choose to always be peaceful.
- **Reflect on** the benefits of peaceful behavior.

1. **DO NOT HARM**
   
   This means seeking to do good for others; wishing them well; and avoiding causing harm through thoughts, words, and actions. Swami Sivananda said, “Wish good to all beings; this purifies the mind.”

2. **BE TRUTHFUL**
   
   Being truthful to ourselves is essential, as without this we are incapable of deep introspection. Being truthful to others is also essential, since respecting our values is the foundation of a healthy mind.

6. **MAINTAIN CLEANLINESS**
   
   A clean body is achieved through asanas, diet (ideally vegetarian), and daily hygiene (see pp.34–35). Keeping the mind clean involves avoiding tamsic impressions, and not indulging in gossip, criticism, or negative thinking.

7. **BE CONTENTED**
   
   Contentment is being grateful for what life has given us, and showing a willingness to work with it. It requires an attitude of patience, knowing that change is slow and the fruits of practice take a long time to show.
“Think deeply, decide correctly, act carefully, speak truthfully, behave properly. You will be peaceful and successful.”

SWAMI SIVANANDA

Ayurveda and yoga teach moderation in sexuality, so that sexual energy can build up and be transformed into mental strength. Full practice (the diversion of all sexual energy) is only possible with systematic yoga practice.

Willpower alone is not enough to break the pattern of fear and ignorance—we must accept help by opening ourselves up to a higher influence we can trust. This may be a form of the divine or a spiritual teacher.

Greed for material wealth prevents us from connecting to the Self, while the clutter created by having many possessions makes it harder to calm the mind. Gratefully accept what you have, and don’t take more than you need.

To reach full mental health in the form of lasting peace and joy is a worthy goal, and so requires many sacrifices. This can only be done with the self-discipline to stay focused on this goal and face the challenges of life.

The mind can be nurtured by reading spiritual books, listening to uplifting discourse, and repeating mantras. It is not about accumulating knowledge, but gaining a greater understanding of oneself.

Don’t steal

Taking what belongs to others makes the mind tamasic (resistant). This includes intellectual property and material possessions, as well as being careful not to take too much from the world without giving back.

Be sexually moderate

LIVE modestly

Be disciplined

Strive for self-improvement

Surrender to a higher power

Greed for material wealth prevents us from connecting to the Self, while the clutter created by having many possessions makes it harder to calm the mind. Gratefully accept what you have, and don’t take more than you need.

MEDITATION PRACTICE

Meditation goes beyond positive thinking. It teaches us that we already have all we need, and that, by creating space and silence within, we can experience the peace and bliss of our true Self.

How to meditate

Meditation requires focusing your attention on one object. Practice daily for 20–30 minutes. Find a clean, quiet place (a cluttered or dirty environment will distract the mind), sit in a comfortable position with your back straight, then begin.

1. **Focus on your breath.** Start with a few deep and slow breaths to trigger a relaxation response in your nervous system.

2. **Focus on** your third eye or the center of your chest (see right) to ground your mind and start channeling its energy.

3. **Slow your breathing** to a minimum; inhale and exhale silently for 3–4 seconds. Clearly instruct your mind to slow down and relax.

MENTAL BENEFITS

- Focuses the mind, so we can see into our inner world.
- Removes tamas (resistance).
- Helps overcome rajas (agitation).
- Increases sattva (harmony).
- Empties the mind of thoughts.

Choose an object that you find uplifting. This might be a shaft of light, an open space, a flower, or even the ocean.

Repeat a mantra that you have chosen. Look at pp.178–81 for examples of different types of mantras and how to use them.

Watch your mind and the thoughts that run through it without reacting to them, even if negative or disturbing.

4. **Focus on an object of concentration;** this can be an object, mantra, or your mind itself.

5. **Finish your meditation session** on a feeling of gratefulness or a short prayer for the world.

SIGNS OF PROGRESS

Your progress is not necessarily measured by the success in focusing your mind, or by whether you have special experiences during your meditation practice. You will know that you are on the right track mainly by the way you feel the rest of the day:

- Your mind will be generally more calm, positive and balanced
- Your emotions will be more steady and of a sattvic nature
- You will feel inspired to serve others
- You will be more tolerant and compassionate towards others
- You will adapt and adjust more easily to change
- You will develop a broader perspective of life
- You will be more accepting of life and yourself.
“Do not force the mind to meditate. Understand the mind first; study the three gunas. Only then will meditation be smooth and easy.”

SWAMI SIVANANDA

**4 Focus on an object** of concentration; this can be an object, mantra, or your mind itself.

- **Choose an object** that you find uplifting. This might be a shaft of light, an open space, a flower, or even the ocean.
- **Repeat a mantra** that you have chosen. Look at pp.178–81 for examples of different types of mantras and how to use them.

- **You will feel** inspired to serve others
- **You will be more** tolerant and compassionate towards others
- **You will adapt** and adjust more easily to change
- **You will develop** a broader perspective of life
- **You will be more** accepting of life and yourself.
THE POWER OF MANTRAS

The challenge of meditation is to maintain your attention as long as you can. The mind has a tendency to get distracted, so a helpful tool to prevent this is a mantra.

What are mantras?

Mantras are to the mind what asanas are to the body – they can reshape and transform it in a positive way. A mantra is a sound or phrase, and the practice of using mantras is simple – just repeat the sound or phrase loudly, quietly, or mentally. These repetitions give the mind energy, while the vibrations created by saying the mantra overpower and dissolve negative thought patterns, replacing them with positive ones.

Repeating mantras requires patience, and a mantra may have to be repeated many thousands of times before its power is released. It is like creating a fire – it needs to constantly be fed with wood so that it burns brighter and brighter.

There are many types of mantras you can chant (see pp.180–81). It is often best to learn the pronunciation from a teacher, so you may want to start with a simple mantra, such as “OM.”

“\( \text{This sound, which is held in the field of our consciousness, liberates us.} \)\”

MANTRA SHASTRA

MENTAL BENEFITS

- Cleanses, soothes, and rejuvenates the mind.
- Turns the mind inward, making it pure and peaceful.
- Sublimates selfish emotion, turning it into love.
- Allows one to realize the unity of all forms, connected to the source of life.
Repeating mantras

Mantra practice should be done daily for 20–30 minutes. Start by sitting in a clean, quiet place in a comfortable position. Ideally, take a shower first and wear clean clothes. See pp.180–81 for information about which mantra to use.

1. RELAX
   Close your eyes. Relax your body and mind by focusing on your breathing.

2. FOCUS
   Focus on the present; don’t think about the past and future.

3. REPEAT
   Repeat your mantra silently within.

4. SYNCHRONIZE
   Synchronize your mantra repetitions with your breath.

5. MEANING
   Focus on the sound, the meaning, or the deity associated with your mantra.

CHANTING FOR VATA
Those with a lot of vata in their constitution benefit from a slow repetition of their mantra to calm their hyperactive tendencies.

CHANTING FOR PITTA
To counteract their sharp natures, those with a lot of pitta in their constitution should repeat their mantra with a feeling of reverence.

CHANTING FOR KAPHA
Repeating their mantra quickly is best for those with dominant kapha. They may start loudly to overcome any sluggishness.

MANTRAS AND MENTAL HEALTH
According to Ayurveda, mantras can be an effective way to alleviate mental health issues. The energy of the mantra breaks down negative thought patterns without requiring analysis of the problems causing them. Speech-based therapies often require talking about problems, which may bring greater awareness of their nature and causes, but may not necessarily give one the power to detach and move on.
Choosing a mantra

The process of deciding which mantra you want to use is largely intuitive. You may feel attracted to the sound of the mantra, or feel inspired by the deity it represents. You might also choose the one that sounds and feels right when you say it.

The two main types of mantras are nirguna mantras and saguna mantras. Both types should be used in the same way. Pick one mantra and work with it systematically. Repeat it during your meditation session and use it throughout the day to focus, elevate, and protect the mind from the negative energies of rajas (agitation) and tamas (resistance).

“Repeat your mantra at all times, even while you study, play, and work, while you eat and rest. The mantra is the source of all inspiration and strength.”

SWAMI SIVANANDA

NIRGUNA MANTRAS

The powerful vibrations generated by these mantras activate the chakras (energy centers of the body, see p.176), tuning them in the same way that you would an instrument. The outcome is an inner awakening, in which we realize our connection to the greater body of the universe.

OM

The sound of creation

The OM sound brings inspiration and intuition. Most mantras begin with “OM,” but it can also be chanted by itself. Swami Sivananda says the OM is “your spiritual food, ... derive energy from OM, rely on OM, meditate on OM – you will attain the highest knowledge.”

SO’HAM

The essence of breath

The sound of this mantra can be synchronized with the breath (inhale on “SO” and exhale on “HAM”). It awakens the power of discrimination, asserting again and again that we are not our outer form, but rather a witness and dweller in our form.
SAGUNA MANTRAS
These mantras connect us to the inner self through the medium of deities. In Hinduism, each deity is a personification of a different power of the universe, for example, Siva represents transformation. Recognizing and connecting to these powers is a great aid to psychological healing.

OM Gam Ganapataye Namah
Deity: Ganesha
Deity’s essence: Removal of obstacles

OM Namah Sivaya
Deity: Siva
Deity’s essence: Transformation

OM Namo Narayanaya
Deity: Vishnu
Deity’s essence: Benevolence and peace

OM Shri Ramaya Namah
Deity: Rama
Deity’s essence: Duty and harmony

OM Namo Bhagavate Vasudevaya
Deity: Krishna
Deity’s essence: Joy and love

OM Shri Durgayai Namah
Deity: Durga
Deity’s essence: Divine protection and righteousness

OM Shri Mahalakshmyai Namah
Deity: Lakshmi
Deity’s essence: Beauty, generosity, and abundance

OM Aim Saraswatyai Namah
Deity: Saraswati
Deity’s essence: Creation
KARMA YOGA

Focusing the mind during meditation can be a real challenge. A good way to increase concentration and sattva (harmony) in these circumstances is through karma yoga – the practice of selfless service.

Balancing the mind through selfless service

Karma yoga requires a person to act in the service of others without expectation of material gain, acknowledgment, or fame. The action must be performed for its own sake.

The change of focus from oneself to others diverts the mind from self-centered thought patterns. What’s more, the process actually serves to balance the mind, because we are freed from the biggest source of psychological problems – the ego, which creates a sense of separation from others. When we open ourselves up to the pain of other beings (humans, animals, or even the planet as a whole), we can relate to them with compassion and empathy. This uplifts our minds and opens our hearts. After all, the purpose of human life goes beyond individual well-being – it aims at the expression of a higher consciousness through the individual. Our dharma (duty to live the right way) is thus to serve and work for the good of all beings. This will give us lasting peace and a sense of purpose in life.

How to practice karma yoga

Think how you can best use your energy, time, material resources, or knowledge for the good of society. This will cleanse your mind and bring you peace. When helping others, try to do the things shown around the image on the right.
“Life is meant for service and not for self-seeking. Hold your life for the service of others. The more energy you expend in elevating others, the more universal energy will flow into you.”

SWAMI SIVANANDA

This advice will help you serve others more successfully.

EXAMPLES OF SERVICE
Swami Sivananda recommended practicing karma yoga for a few hours each week. Some examples of selfless service are:

- **Helping in a spiritual** or charitable institution once a week
- **Visiting elderly people** in a retirement home and lifting them up with positive words or spiritual readings
- **Saying encouraging** and compassionate words to friends in distress
- **Thinking how** you can best use your energy, education, or wealth to improve society, and then acting on it
THE BIGGER PICTURE

Ayurveda and yoga follow the philosophy of unity, asserting that all beings are essentially one, even though they appear as separate forms. This understanding gives us the strength to deal with life’s challenges.

The path to moksha

We have been introduced to the idea that the consciousness resides in the Self (see pp.170–71). Yoga and Ayurveda teach that this consciousness is connected to the consciousness of all beings.

The realization of this truth is called moksha (see p.9), and it allows us to experience the bliss of our true being. It is not easy to break the illusion that all beings are separate. Even if it may seem like a distant goal, we benefit from regularly contemplating this truth.

Positivity during pain

We can learn from pain and discomfort, as these remind us of the transience of our physical forms. While good health is a blessing, it may keep us attached to our bodies and minds. The poor health of the body can act as a catalyst for moksha, making us aware of the Self beyond the form of the body and mind. This creates positivity in periods of poor physical health — we can use this time as an opportunity for spiritual growth.

Beyond physical existence

Once we realize that we are spiritual beings having a physical experience, the way we relate to death changes. The fear of ceasing to exist is deep-set within us, but knowing we exist beyond our physical and mental forms helps us face this fear with greater ease. According to yoga, death is the separation of the Self from the physical body. It is an experience like dreaming, where the physical form is lost, but the consciousness continues to exist.
“See life as a whole. All life is one. The world is one home and we are all members of one human family. All creation is an organic whole. No one is independent from that whole.”

SWAMI SIVANANDA

**POSITIVE AFFIRMATIONS FOR SPIRITUAL HEALTH**

Repeat these affirmations during your meditation, or any time during the day when you want to center yourself and feel peace:

- **I am the Self**, which is independent of the body and mind.
- **I am the pure light** of consciousness.
- **I am free**.
- **I was never born**, I will never die.
- **I am bliss** absolute.
A physician must use their knowledge as a light to enter into the heart of a person.

CHARAKA
SEEING AN AYURVEDIC PRACTITIONER

“A physician must use their knowledge as a light to enter into the heart of a person.”

CHARAKA
AYURVEDIC DIAGNOSIS

Seeing an Ayurvedic practitioner can help you if you want to learn more about your constitution, optimize your health, or get treatment if you are ill.

Holistic assessment
An Ayurvedic practitioner looks at the whole picture of your health during an assessment, and tries to achieve a full understanding of you as a person. To do this, he or she will determine your constitution, appraise the balance of your doshas, the health of your dhatus (tissues), the strength of your agni (digestive fire) as well as your ojas (immunity), and sattva (mental harmony). This will involve asking questions on topics such as your lifestyle, diet, and personal and professional life, as well as your medical history and any current problems. Knowing your constitution will provide insight into which doshas are most likely to be increased and which therapies will suit you best, while your level of ojas (immunity) and state of mind influence your ability to recover well.

Preventing illness
In Ayurveda, disease is considered to be a symptom of an imbalance in the body – an elevated dosha, weak agni, or the presence of ama (toxins) can affect your tissues and eventually cause illness. Ayurveda aims to restore balance in the early stages before disease can manifest. This means treating unspecific symptoms, such as general feelings of unease or discomfort.
To diagnose your state of health, it is important for an Ayurvedic practitioner to assess these aspects of your life, mind, and body.

Your lifestyle—when and how often you eat, sleep, exercise, etc.—affects the function of your body.

Your diet—what and how much you eat—is assessed to determine how it impacts your doshas and agni.

Your personal and professional situation has a large impact on the health of your body and mind.

Your age affects how resilient you are and which doshas are most likely to be irritated or elevated.

Your physical strength is an indication of your dhatus’ resilience to disease.

Your elimination of mala (sweat, urine, and stool) indicates how well your body is functioning.

Treating and rebalancing

The Ayurvedic practitioner’s aim is to both treat immediate health issues and help you to stay well afterward. After assessing your symptoms and diagnosing which doshas and tissues are involved, he or she will recommend dietary and lifestyle changes to treat the root cause of the problem. The practitioner may also treat you with body treatments, nourishing or cleansing therapies, or Ayurvedic herbal medicines. The goal of this comprehensive regimen is to help prevent the same imbalances from returning.

“The causes of disease are placed into three groups: unsuitable use of the senses, faulty judgment, and the effects of time.”

SWAMI SIVANANDA
YOUR EXAMINATION

After asking questions, the practitioner will do a physical examination. This involves taking your pulse and examining your body to assess your constitution, to look for signs of dosha imbalances, and to determine the state of your dhatus (tissues).

Checking your pulse

Your pulse is one of the primary indicators of the state of your doshas. The practitioner uses three fingers to find your pulse, and its location provides information about your doshas.

1. The practitioner places three fingers over your radial artery. In women, the pulse of the left wrist is taken first; in men, the right.

2. He or she presses down firmly until they cannot feel your pulse, then they release their fingers slowly and note which finger first feels your pulse return.

3. A strong pulse under the forefinger indicates strong vata; the middle finger indicates strong pitta; and the ring finger indicates strong kapha.

PULSE PATTERN

The nature of your pulse (see right) can help to identify which dosha(s) are dominant in your constitution.

A vata pulse is quick and changes speed, like a winding snake.

A pitta pulse is strong, like the movement of a jumping frog.

A kapha pulse feels full, like the stately movement of a swan.
Examining the body

The tongue, eyes, nails, and skin are some of the most common parts of the body for a practitioner to examine because they can show early signs of dosha imbalance, weak agni (digestive fire), or ama (toxins). The practitioner may also examine your chest and abdomen.

**TONGUE**

*If your tongue* is dry, you may have a vata imbalance. If it is deep red or yellowish in color, it could signal a pitta imbalance, while a white coating indicates kapha imbalance. A thick coating may indicate ama.

**EYES**

*Your eyes may be* restless, indicating vata imbalance; yellowish and sensitive to light, indicating pitta imbalance; or watering and dull, indicating an imbalance of kapha.

**SKIN**

*If your skin* is dry, cracked, and rough, you may have a vata imbalance. Red, hot, or sensitive skin with rashes can indicate pitta imbalance, while pale, cool, or clammy skin can indicate a kapha imbalance.

**CHEST**

*Your chest could be* examined to check for abnormal sounds, such as wheezing. The presence of large amounts of mucus can indicate excess kapha.

**NAILS**

*Your nails will be* strong and healthy if agni is healthy, but longitudinal lines can indicate your body is not absorbing food effectively.

**ABDOMEN**

*Your abdomen* or any tender part of your body may be palpated to assess damage or injury. This can help the practitioner determine the state of your tissues.

“*Ayurveda is the science of life. It shows the way to remove diseases, to maintain sound health, and to attain longevity.*”

SWAMI SIVANANDA
BODY TREATMENTS

These treatments aim to pacify the doshas and strengthen the dhatus (tissues). They require the application of therapeutic substances—such as oils or powders—directly onto the body.

Healing and soothing

The direct application of therapeutic substances onto the body helps rejuvenate the dhatus (tissues) and supports the function of the entire body or the specific part of the body that is treated. Body treatments can also be used to soothe irritated doshas (for cases of minor dosha imbalance). To do this, a practitioner will choose a therapeutic substance that pacifies the relevant dosha—such as giving someone with irritated vata a massage using sesame oil.

IMPORTANT NOTE

These treatments should not be done on a full stomach or immediately after eating. If you are pregnant, seek the advice of an Ayurvedic practitioner before having any treatments, as some may not be suitable.

CLASSIC OIL MASSAGE

Known as “abhyaanga” in Sanskrit, this can be a full-body massage or a partial massage of the head and face, back, or feet. Warm herbal oil is used according to the season and the constitution of the person treated. Oil massages are particularly beneficial for vata, as they moisturize and calm the nervous system, strengthen the dhatus, alleviate pain, reduce joint stiffness, boost immunity, and balance hormones. They are not advised in cases of fever or ama.

STEAM BATH

This is a classic therapy that uses wet heat. It aids the digestion of the oil and herbs applied during a massage, helping to eliminate sweat and pacify vata and kapha. In cases of strongly elevated kapha, dry heat may be more appropriate. pp.194–95). All massages should ideally be followed by a steam bath, but steam baths can be performed as separate treatments.

OIL POURING ON THE FOREHEAD

Known as “shirodhara” in Sanskrit, this is a treatment in which warm oil (for all three doshas) or buttermilk (to cool down pitta) is poured onto the forehead in a continuous stream. It has a powerful effect on the mind, providing deep relaxation, improving concentration and sleep, and easing headaches and depression. It is best done three times in a single session by an experienced therapist as part of a full therapeutic regimen, such as panchakarma (see pp.194–95).
DRY POWDER MASSAGE
This massage treatment uses a powder made from kapha-reducing herbs, such as basil and sage, mixed with chickpea flour and salt. This alleviates problems associated with elevated kapha (such as excess fat tissue or a slow metabolism) due to its drying, heating, and stimulating qualities. Dry powder massages are a good alternative to oil massages if you have ama, but they should not be done on areas of the body affected by skin irritations or rashes.

LOCAL OIL TREATMENT
In this treatment, a ring made from chickpea flour and water is laid on a specific joint or area of the body and slowly filled with heated herbal oil. A therapist gently stirs the oil as it is poured. The oil is replaced when it starts to cool. Local oil treatment is used for treating slipped or worn discs, lumbago, joint or nerve pain, menstrual pain, and arthritis. It can also be performed on the chest over the heart as a therapy for high blood pressure.

HERBAL BOLUS MASSAGE
A cheesecloth bag (or bolus) filled with herbal preparations and heated in oil is used to massage the body—the heat aids the absorption of the active ingredients in the herbs. To pacify vata, herbs, oil, milk, and rice are combined in order to provide a nourishing effect; for pitta, a mixture of herbs and pitta oil are used for cooling effect; and for kapha, the bolus is filled with herbs and oil that provide a heating, stimulating effect.

EYE BATH
As with the local oil treatment (see left), eye baths require a ring made from chickpea flour and water, but this time it is placed over the eyes. The therapist pours lukewarm ghee into the ring and the patient is then asked to open his or her eyes and move them around. Eye baths are used to help soothe irritated eyes, help preserve healthy eyesight, and treat certain eye diseases. Do not have an eye bath if you have been diagnosed with glaucoma.

THERAPEUTIC ACTIONS
Ayurvedic treatments are designed to perform one or more of the six therapeutic actions described in the classical texts (see right). Your practitioner will select an appropriate body treatment for you based on the desired action. For example, if you have excess kapha in the form of being overweight, reducing and drying therapies, such as fasting and dry powder massage, will suit your needs best.

- **Reducing** therapies remove excess tissue and increase lightness.
- **Nourishing** therapies, such as massage with nourishing oils, build up tissue and increase heaviness, oiliness, and cold.
- **Drying** therapies counteract excess oil, water, and stickiness, and have a reducing effect.
- **Oiling** therapies have a lubricating action that softens and moisturizes the body
- **Fomentation** therapies induce sweating to help counteract stiffness, heaviness, and cold.
- **Blocking** therapies reduce the flow of liquids (e.g., in diarrhea or menorrhagia). They increase cold, slowness, dryness, fineness, and stability.
**PANCHAKARMA**

Meaning “five actions” in Sanskrit, panchakarma is a set of five cleansing, detoxifying treatments that remove elevated doshas and rejuvenate the whole body.

**Purifying therapies**

Panchakarma restores energy, cleanses the tissues, and reinstates the natural balance of the doshas. While body treatments can soothe irritated doshas, panchakarma treatments actively remove elevated doshas (doshas that have become seriously unbalanced and can affect the tissues over time). The effects of panchakarma can be felt for a year or longer if the proper diet and lifestyle advice is followed. Ideally, panchakarma treatments should be performed at the change of each season to get rid of the doshas. Nowadays, it is generally recommended to have panchakarma treatments once a year in spring or fall.

**Types of panchakarma**

There are five therapies in classical panchakarma (see right); these can be intense, and require good health. In modern times, Kerala panchakarma is more commonly used – it is less taxing, and can even be prescribed to the elderly or unwell. Most Ayurvedic treatment centers offer Kerala panchakarma.

A full panchakarma treatment should be performed by an experienced Ayurvedic practitioner in an in-patient environment.

---

### CLASSICAL PANCHAKARMA

1. **VAMANA (EMESIS)**

   *Medical emesis*, or “vamana” in Sanskrit, eliminates elevated kapha and pitta from the respiratory and gastrointestinal tract. It involves giving medicines to induce therapeutic vomiting.

2. **VIRECHANA (PURGATION)**

   *Medical purgation*, or “virechana” in Sanskrit, eliminates elevated pitta from the small intestine. It involves evacuating the bowels by giving the patient an herbal purgative or laxative.

3. **BASTI (ENEMA)**

   *Herbal enemas*, or “basti” in Sanskrit, are mostly used to eliminate elevated vata, but can be used to reduce pitta or kapha. Oil-based enemas have a nourishing effect, while water-based enemas are cleansing.

4. **NASYA (OILING NOSTRILS)**

   *Nasal passage lubrication*, or “nasya” in Sanskrit, eliminates elevated kapha and reduces vata and pitta. The treatment is administered by pouring herbal oil into the sinuses through the nostrils.

5. **RAKTA MOKSHA (BLEEDING)**

   *Blood letting*, or “rakta moksha” in Sanskrit, eliminates blood as a tissue and removes elevated pitta. In modern times, it is best done by donating blood or leech therapy.
## Kerala Panchakarma

### 1. Abhyanga (Oil Massage)
*Oil massages* (see p.192) are preparatory treatments for Kerala panchakarma. They are effective at soothing vata, and can also be used to soothe pitta and kapha if the correct oils are used.

### 2. Inner Oiling
*This process requires* the ingestion of ghee, and only rarely oil. It is used as a preparatory treatment, lubricating the body for purgation and enema treatments.

### 3. Virechana (Purgation)
*Medical purgation* treatments are often included in Kerala panchakarma. They eliminate elevated pitta from the small intestine. Inner and outer oiling must be used as preparation.

### 4. Basti (Enema)
An *enema treatment* with oil, herbal oil, or herbal decoction is often included in Kerala panchakarma, as well as in classical panchakarma. It eliminates elevated vata.

### 5. Other Body Treatments
*Body treatments*, such as oil pouring onto the forehead, or herbal bolus or dry powder massage (see pp.192–93), may be included to help to soothe irritated doshas.

---

### Preparing for Panchakarma
*Ama* should be treated (i.e., digested) before undergoing either form of panchakarma. Classical panchakarma requires proper preparation with oil massages and inner oiling, mostly using herbal or pure ghee. Oil massages and inner oiling are included in the main part of Kerala panchakarma.

Vata can be irritated by treatments from both forms of panchakarma, so great care is taken to soothe it. Travel, change of time zone, and climate are all vata-irritating factors, so if you are traveling for your treatment (e.g., Westerners going to India), allow ample time to acclimatize beforehand.

After panchakarma, give yourself time to recover before you resume your daily life. Don’t plan any vacations or intense work for the following 2–3 weeks.
AYURVEDIC MEDICINES

In Ayurveda, all substances have a therapeutic effect and can be used as medicine. This includes herbs and foods when given in medicinal doses.

Healing effects
Ayurveda has a vast knowledge of India’s indigenous herbs, and treatment with these herbs is a mainstay. Herbs and other therapeutic substances are selected by an Ayurvedic practitioner according to six criteria that determine the effects it has on you (see right). These effects include pacifying doshas, healing dhatus (tissues), strengthening agni (digestive fire), and influencing the mind and body in general.

Forms of herbal preparation
There are many types of herbal preparations used in Ayurveda. The most common of these are listed below.

- **Powdered herbs** are best taken with hot water (for all doshas), warm milk (for vata), ghee (for pitta), or honey (for kapha).
- **Herbal pills or capsules** can be taken in the same way as powdered herbs (see above).
- **Decoctions** are water-based extracts of the herb’s active ingredients. They can be taken orally with salt, honey, or sugar. Herbs are added to ghee or oils by making a decoction first.
- **Herbal wines**, known as asavas or arishtas, are fermented infusions or decoctions. They aid digestion and absorption of the herbs even if agni is weak.
- **Herbal oils** are applied to the body topically via massage. Ayurvedic oils are rich in healing herbs: up to 10lb (5kg) of herbs are processed into approximately 4 cups of oil, ensuring that your body receives a large quantity of healing herbs even from a single massage.

TASTE

**The effect a substance** has on you starts with its taste. Each taste has various therapeutic actions. For example, the sweet taste builds tissue; sour is slightly purgative; salty promotes digestion; pungent is cleansing and stimulates agni; bitter helps lower fever; and astringent promotes wound healing.

QUALITIES

**Ayurvedic medicine** refers to 20 main qualities in pairs of opposites, such as light–heavy and dull–sharp. These qualities are used to create an effect or counteract an unwanted property. For example, too much dryness in the body can be counteracted with ghee, which has the “oily” quality.

POTENCY

**Potency refers to** whether a substance has a heating effect or cooling effect. A substance’s potency is important because it is not changed by digestion. Hot potency pacifies vata and kapha and elevates pitta, while cold potency pacifies pitta and elevates vata and kapha.
POST-DIGESTIVE TASTE

We are unable to perceive this taste, which develops after the digestive process. The six tastes are consolidated into just three: sweet, sour, and pungent. Post-digestive tastes have a more significant, longer-lasting effect than pre-digestive tastes.

ACTIONS ON THE BODY

Each substance can have its own specific effects on the body’s functions, such as reducing fever, cough, or weakness; building or reducing tissue; stopping flow; or removing blockages. It may also have a reducing or elevating effect on a particular dosha — for example, sugar has an elevating effect on kapha dosha.

SPECIAL PROPERTIES

Some substances have special properties that cannot be explained by its other aspects (taste, quality, etc.). For example, ghee has the special property of stimulating agni despite being cooling and heavy (and thus in theory being likely to weaken agni).

RESTORATIVE MEDICINES

Ayurveda includes a branch of therapy called “rasayana” (or “rejuvenation”) that focuses on restoring tissue health and generating resilient tissue in the long term. Healthy tissues and organs are the body’s best defense against disease, as disease cannot manifest itself in healthy tissues, even if the doshas are irritated or elevated.

Rasayana is the last step in Ayurvedic treatment. These medicines are given after agni has been strengthened, ama (toxins) has been removed, and the doshas balanced (for example, after panchakarma). This ensures that the body is able to fully absorb their benefits. As well as therapeutic herbs, rasayana includes foods such as milk, ghee, and honey.

“Not for yourself, not for gain, but solely for the good of humanity should you treat your patients.”

CHARAKA

Ayurveda’s six criteria of therapeutic properties encompass the effects a substance has on you from first taste to digestion and absorption.
FOR COMMON AILMENTS

"The greater part of the treatment of an Ayurvedic practitioner is by medicinal herbs."

SWAMI SIVANANDA
HOME REMEDIES
FOR COMMON AILMENTS

“The greater part of the treatment of an Ayurvedic practitioner is by medicinal herbs.”

SWAMI SIVANANDA
TREATING COMMON AILMENTS BY DOSHA

In Ayurveda, the dosha imbalances causing a disease are treated, as well as the disease itself. For this reason, it is important to consider dominant or elevated dosha(s) when choosing remedies.

Ailments as imbalances

Herbs and spices are essential to support the body’s functions according to Ayurveda, and so Ayurvedic home remedies use high dosages of these ingredients to correct imbalances in the body.

Elevation of any of the three doshas can cause any disease, but many diseases are commonly caused by the elevation of one or more specific dosha(s) (see right). How a disease presents itself is dependent on the constitution of the individual. By examining the symptoms of a disease in a specific person, an experienced Ayurvedic practitioner can determine which dosha(s) and qualities are involved, and prescribe a suitable remedy for that person.

Many common ailments cause similar problems in people of all constitutions; in these cases, there are general remedies that can be used. For example, the term “common cold” already points to the quality “cold”; therefore, any remedy that is heating will help.

Choosing the right remedy

In the remedy lists that follow, some remedies are listed as “for all doshas” if they are suitable for everyone. The other remedies will be listed as only for one or two doshas; this means they are only meant for those whose constitution is mainly made up of those doshas (e.g., if it says for pitta and kapha only, it should not be taken by someone with dominant or elevated vata). If the home remedies in this chapter do not help you, we advise that you seek professional medical advice.

VATA

If vata is dominant in your constitution, or you have elevated vata, be careful to avoid anything that increases dryness, lightness, movement, and cold, and is pungent, bitter, and astringent, because this will elevate vata further.

AILMENTS

Vata is most commonly involved in bone and joint problems, head colds, heart disease, diseases of the colon, urinary and genital tract, and any type of trauma.
KAPHA
If kapha is dominant in your constitution, or you have elevated kapha, be careful to avoid anything that is sweet, salty, and sour, and increases heaviness, cold, oiliness, moisture, and stickiness, as this will elevate kapha further.

AILMENTS
Kapha is most commonly involved in diseases of the respiratory tract and stomach, head colds, diabetes, slow metabolism, and any condition where there is heaviness, increased mucus, blockage, swelling, and excess tissue.

PITTA
If pitta is dominant in your constitution, or you have elevated pitta, be careful to avoid anything that increases heat, lightness, oiliness, and is pungent, sour, and stimulating, as this will elevate pitta further. Use long pepper instead of ginger or black pepper.

AILMENTS
Pitta is most commonly involved in diseases of the skin, blood, eyes, liver, stomach, and small intestine, and any condition with increased acidity.

THE HEALING POWER OF PLANTS
Ayurveda holds medicinal plants in high regard because they contain the cosmic energy of the sun, which in Ayurvedic philosophy is the greatest known source of healing power, and store the healing potency of moonlight. They convert valuable inorganic earth salts, chemicals, and minerals into organic matter, making them more readily accessible to human physiology. They are made up of the five elements earth, water, fire, air, and ether, and affect every cell of the body.

IMPORTANT NOTE
Seeking professional medical advice will aid the diagnosis of ailments and the prescription of remedies and dosages.
When using the remedies in this book, follow the preparation and dosage instructions carefully.
If any remedy appears to make the ailment worse, or fails to improve an ailment after 3 days, stop using it and seek professional medical advice.
If you are pregnant or treating a child, always seek professional medical advice before using any remedy.
Reduce dosages by ½ when treating a child.
HOME REMEDIES FOR COMMON AILMENTS

HOW TO PREPARE HOME REMEDIES

Many of the remedies described in this book are simple to use. Instructions on how to prepare and administer more complex or less familiar remedies are given here.

DECOCTIONS
This is an extract made by boiling herbs or spices in water. Plant chemicals diffuse into the water and become concentrated as the liquid boils. Decoctions can be consumed, applied locally, or used for a bath.

1 Mix 2 oz (60 g) ground herb or spice with 4 ¼ cups water. If you are using whole or solid parts, double the quantity of the herb.

2 Boil until only 1 cup liquid remains, then strain the liquid and discard the solid parts of the herb or spice.

PASTES
This smooth mixture is made by combining ground spices or ground dried herbs with a liquid such as water or oil. A paste should be applied locally, and left in place for 20–30 minutes before being washed off.

1 Mix 1 part ground spices or ground dried herbs with ¼ part water or ½ part oil.

2 You can keep the paste in a jar for 24 hours. Pastes are most effective when used immediately.

COLD EXTRACTS
A cold extract is the filtered water of an herb or spice soaked in water overnight. It can be consumed or applied locally.

1 Use 1 part ground herb or spice with 8 parts water. (If you are using whole or solid parts, double the quantity of the herb.)

2 Steep in cold water overnight or for at least 8 hours, then strain the liquid and discard the herb.

MEASUREMENTS
Throughout the chapter, small quantities are given in teaspoons for ease.

- ¼ tsp 1 ⅛ oz (1 g)
- ½ tsp 1 ⅜ oz (2 g)
- Level tsp 1 ⅛ oz (3 g)
- Heaping tsp ⅛ oz (5 g)

AYURVEDIC INGREDIENTS
According to the ancient scripture by Charaka, Ayurvedic principles can be applied to any plant with known therapeutic properties, but plants grown locally are most effective.

Remedies in this chapter use some plants from the ancient Indian scriptures. Most can now be found throughout the world in good supermarkets, Indian grocery stores, health food stores, or online.

- Tulsi—this plant is also known as holy basil. The leaves can be used to make a tea, or the juice from them extracted.

- Long pepper (pippali)—rare in European cuisine, it is widely available in Indian grocery stores.

- Psyllium husk—this powder is made from the outer coating of seeds from the psyllium plant.

“Ayurveda is a perfect science of life and consists of a body of most remarkable knowledge on medicinal herbs and therapeutic roots.”

SWAMI SIVANANDA
POULTICES

Made from herbs, poultices are applied locally to the skin and held in place with a bandage for an hour or more. Either use fresh, whole leaves, or make the leaves into a paste (see below). If using whole leaves, skip straight to step 2.

1. Crush fresh leaves and/or solid parts of a plant to a pulp in a mortar. Add a small amount of water to bind the leaves into a paste, if necessary. If using dried leaves, boil them in water for 5 minutes to unlock the active ingredients. Then, drain the boiling water and crush the leaves into paste.

2. Apply a thick layer of poultice (paste or whole leaves) locally, then cover with gauze and secure with a bandage.

3. Leave the poultice in place for 1–2 hours, or overnight if possible, then remove the coverings and wash the affected area.

PILLS & LOZENGES

These are small, solid balls made from ground herbs or spices and a sticky substance. Pills should be swallowed, and lozenges sucked or chewed.

1. Combine 1 part ground herbs or spices to ¼ part honey, ghee, or oil.

2. Roll on a dry clean surface until you have a solid pill or lozenge.

AYURVEDIC INGREDIENTS

According to the ancient scripture by Charaka, Ayurvedic principles can be applied to any plant with known therapeutic properties, but plants grown locally are most effective.

Remedies in this chapter use some plants from the ancient Indian scriptures. Most can now be found throughout the world in good supermarkets, Indian grocery stores, health food stores, or online.

- **Tulsi**—this plant is also known as holy basil. The leaves can be used to make a tea, or the juice from them extracted.
- **Long pepper (pippali)**—rare in European cuisine, it is widely available in Indian grocery stores.
- **Psyllium husk**—this powder is made from the outer coating of seeds from the psyllium plant.

SWAMI SIVANANDA
REMEDIES FOR COMMON AILMENTS

This section includes a variety of common acute and chronic ailments. The remedies given relieve specific symptoms and are not intended as a substitute for professional treatment of chronic disease. It is best to use one remedy for a specific condition at a time.

Anemia
These remedies should be used alongside professional treatment.

FOR ALL DOSHAS
- Boil 1 cup water with 1 tsp ground cardamom and 1 tsp ground cinnamon and drink three times a day.

Cholesterol, high
These remedies aim to help lower cholesterol. Seek professional medical advice before using them.

FOR ALL DOSHAS
- Take ½ tsp fenugreek seeds daily.

FOR VATA & KAPHA ONLY
- Use chile generously in your meals.

Anxiety
Anxiety in times of stress is normal, and can be alleviated with these remedies. Sustained anxiety requires professional treatment.

FOR VATA & PITTA ONLY
- Boil ¾ cup milk with 1 tsp cane sugar, 1 tsp fennel seeds, and 2 threads saffron. Drink the mixture warm, taking ½ cup twice daily.

FOR KAPHA ONLY
- The best anxiety remedy for dominant or elevated kapha is physical exercise.

Diabetes
These remedies aim to help lower blood sugar. Seek professional medical advice before using them. If you have poorly controlled diabetes, avoid honey.

FOR ALL DOSHAS
- Drink 1 tsp lemon juice with ½ tsp honey three times a day.
- Make a decoction of 1 tbsp ground turmeric, 3 bay leaves, and 1 tbsp fenugreek seeds and drink ½ cup before each meal; or take these herbs in the same proportions with honey before each meal.

Fatigue
Sustained tiredness can be caused by lack of sleep, stress, or a medical condition. These remedies aim to help you feel more energized. If fatigue persists, seek professional medical attention.

FOR ALL DOSHAS
- Peel coriander seeds by rolling them in paper towels and use the peeled seeds to make a tea. Drink 1 cup of the tea as needed.

FOR VATA & PITTA ONLY
- Boil ½ cup milk with 1 tsp almond butter, 1 tsp cane sugar, and a pinch saffron and ground ginger. Drink one or two times a day. This is helpful if you have had weight loss.
Fever
If a fever (constant or remittent) lasts for more than 3 days, seek medical advice, or earlier if the fever worsens or is joined by other symptoms (such as vomiting). Seek medical advice for fever in children.

FOR ALL DOSHAS
• Eat or chew 3 black peppercorns, 5–10 basil leaves, and 5 neem leaves (ideally fresh) up to three times a day.
• Boil 3–4 cloves in 4½ cups water for 30 minutes and drink in small sips throughout the day.

Headache
These remedies aim to alleviate pain from minor headaches. If headaches return regularly, seek professional medical advice.

FOR ALL DOSHAS
• Drink 1 cup hot water with 2 tbsp lemon juice in the morning and before going to bed.
• Drink lime juice sweetened with cane sugar, ¼ tsp ground cardamom, and a pinch of black pepper three times a day.
• Apply camphor oil to the head as needed.

FOR VATA & KAPHA ONLY
• Apply 1 tbsp grated ginger mixed with 1 tsp honey to the tender area as needed.
• Apply a paste of ground black cardamom or a black pepper poultice to the forehead as needed.

AVOID
• Drinking black tea and coffee
• Working too hard or late at night
• Straining the eyes
• Stress

Heat & hot flushes
Those with dominant or elevated pitta can feel overheated and should take care to keep cool (physically and emotionally), especially in summer. These remedies are also helpful for hot flushes during menopause.

FOR VATA & KAPHA ONLY
• Apply a heated mixture of 2 tbsp sesame oil with 1 tsp cardamom and ¼ tsp ground cinnamon to the forehead.

Head in the head
This is a feeling of heat that only affects the head.

FOR ALL DOSHAS
• Rub castor oil onto the soles of the feet at night.

Insomnia
Use these remedies to help you get to sleep and stay asleep at night.

FOR VATA & PITTA ONLY
• Boil ½ cup milk with ½ tsp nutmeg, ¼ tsp almond milk, and ¼ tsp cane sugar. Drink 30 minutes before going to bed.

FOR KAPHA ONLY
• The best insomnia remedy for kapha constitution or elevated kapha is physical exercise.

Migraine
Migraines are headaches with throbbing on one side of the head. They can cause nausea, vomiting, and sensitivity to light and sound.

FOR ALL DOSHAS
• Mix 2 threads saffron with 1 tsp ghee and apply into each nostril up to three times a day.

FOR VATA & KAPHA ONLY
• Apply a heated mixture of 2 tbsp sesame oil with 1 tsp cardamom and ¼ tsp ground cinnamon to the forehead.

Nosebleed
Seek immediate professional medical treatment for nosebleeds caused by a head injury, with excessive bleeding, or those lasting more than 20 minutes.

FOR ALL DOSHAS
• Carefully apply juice of fresh cilantro leaves to the nostrils with your little finger.
• Make a paste of ground basil seeds and carefully apply into the nostrils with your little finger.

Urinary tract infection
See a doctor if your symptoms don’t improve in a few days.

FOR VATA & PITTA ONLY
• Drink 4 tsp of a decoction of tulsi seeds twice a day.
• Take ¼–½ tsp ground green cardamom in 1 tsp ghee up to three times a day.

FOR ALL DOSHAS
• Drink 4 tsp of a decoction of tulsi seeds twice a day.
• Take ¼–½ tsp ground green cardamom in 1 tsp ghee up to three times a day.
• Drink 1 cup cold extract or decoction of equal parts fennel and coriander seeds, or eat 1 tsp fresh cilantro up to three times a day.

Weight loss
Weight loss can be caused by a variety of problems. Seek professional medical advice for serious weight loss (more than 5 percent bodyweight) if you have not had a recent period of stress and/or an eating disorder.

FOR ALL DOSHAS
• Mix 2 tsp tulsi leaf juice with 1 tsp honey and take three times a day for at least 1 month.
# Remedies for Respiratory Tract Ailments

These remedies will help alleviate symptoms of ailments affecting the respiratory tract. For acute conditions that involve phlegm and mucus, follow the kapha diet by avoiding kapha-elevating foods (for more information, see pp.80–83).

## Asthma
This condition can be caused by any dosha, but kapha is most commonly involved. These remedies add relief to conventional treatment.

**FOR ALL DOSHAS**
- Make pills using 2 tsp ground cloves and 1 tsp honey. Take 2 pills three times a day.
- Mix 1 tsp tulsi leaf juice with ½ tsp ground black pepper and drink 2 tsp three times a day.
- Drink 1 cup orange or lemon juice with 1 tsp honey.

## Bronchitis
Seek professional medical advice if your cough lasts longer than 3 weeks, you have a fever for more than 3 days, you have chest pains or difficulty breathing, or you have repeated bouts of bronchitis.

**FOR ALL DOSHAS**
- Chew on mint leaves.
- Apply a poultice made with mustard seeds to the chest. For vata and kapha, leave it on as long as needed. Those with dominant or elevated pitta should wash off after 10 minutes.

**DIET**
- Follow a kapha diet (see pp.80–83).

**AVOID**
- Exposure to wind and cold, particularly of the head

**CHILDREN**
- Drink tulsi tea up to three times a day.

## Common cold
Rest, sleep, and hydration are best. These remedies will help support the healing process and alleviate symptoms. Only treat children after seeking medical advice and under medical supervision.

**FOR ALL DOSHAS**
- In the early stages, drink tulsi tea or ground ginger and coriander tea as needed.
- Eat 2–3 dates and drink 1 tsp lemon juice in warm water twice a day.

**FOR VATA & KAPHA ONLY**
- Steep 1 tsp ground black cardamom in 1 cup hot water and drink it up to three times a day.

**FOR PITTA ONLY**
- Steep 1 tsp ground green cardamom in 1 cup hot water and drink it up to three times a day.

**DIET**
- Follow a kapha diet (see pp.80–83).

## Cough
Rest and hydration are best. These remedies aim to support the healing process and alleviate symptoms. If your cough lasts longer than 3 weeks, seek professional medical advice; children should be assessed after 1 week. Only treat children after seeking medical advice and under medical supervision.

### Productive cough
These remedies aim to alleviate coughs that produce mucus or phlegm.

**FOR ALL DOSHAS**
- Take 1 tsp honey three times a day, with 1 tsp lemon juice or tulsi leaf juice. Honey is drying and should only be taken as long as the cough is productive. If required, 1 tsp licorice, salt, or sugar counteracts its dryness.
- Make a decoction of long pepper and cinnamon. For vata or pitta, add ½ tsp cane sugar. Drink 2 tbsp two to three times a day.
- Make a lozenge (see p.203) out of 1 tsp honey with 2 tsp ground cloves, or 1 tsp ground ginger and 1 tsp ground green cardamom. Take as needed.

**FOR VATA & KAPHA ONLY**
- Take 1 tsp honey with 1 tsp black pepper three times a day.
**REMEDIES FOR RESPIRATORY TRACT AILMENTS**

**FOR PITTA ONLY**
- Take 1 tsp honey with ½ tsp long pepper three times a day.

**Non-productive cough**
These remedies aim to alleviate dry coughs.

**FOR ALL DOSHAS**
- Mix 1 tbsp fresh ginger juice with 1 tsp raw cane sugar and drink. Perform a steam inhalation afterward. (Lean over a bowl of hot water and cover the head with a towel for 20–30 minutes.)
- Mix 1 tsp ground fennel seeds, ½ tsp licorice, and ½ tsp rock candy. Add 1 tsp of the mixture to 1 tsp honey and take three times a day.

**FOR VATA**
- Dissolve 1 flake rock salt in your mouth as many times a day as you feel comfortable. Do not use if you have high blood pressure.

**CHILDREN**
- Heat 4–8 threads saffron in 1 cup milk and divide into three to four portions. Use in single portions throughout the day.

**Mouth ulcers**
Ulcers can be uncomfortable, but generally clear up themselves with time. These remedies aim to soothe them and speed up recovery. Try one of these remedies at a time.

**FOR ALL DOSHAS**
- Apply a honey or almond paste up to three times a day.
- Gargle fresh cilantro leaf juice up to three times a day.
- Gargle fresh mint juice up to three times a day.

**Respiratory tract infections**
These remedies give relief to respiratory tract infections ranging from the common cold to bronchitis.

**FOR ALL DOSHAS**
- Boil 2 tbsp garden cress seeds with 1 tsp long pepper and 1 tsp tulsi, and mix with 1 tsp cane sugar. Filter and drink ½ cup up to three times a day.

**FOR VATA & PITTA ONLY**
- Take ⅛ tsp black pepper with ½ tsp sugar, or, for pitta, with ½ tsp ghee.

**FOR KAPHA ONLY**
- Take ⅛ tsp black pepper with 1 tsp honey.

**DIET**
- Follow a kapha diet (see pp.80–83).

**Runny nose**
A runny nose is often associated with a cold. These remedies aim to alleviate symptoms. Seek professional advice if a runny nose persists to the extent that it is affecting your quality of life.

**FOR ALL DOSHAS**
- Crush 1 tsp caraway seeds in a mortar, put in a cloth, and inhale the essential oils as needed.
- Heat ½ tsp ground turmeric in 1 cup milk and drink twice a day.

**FOR VATA & KAPHA ONLY**
- Apply a paste of ground ginger or a mixture of equal parts cinnamon, black pepper, and warm water to the forehead and temples.

**Sore throat**
Symptoms usually subside in less than a week. These remedies aim to help soothe the pain and speed recovery. Seek professional medical attention if a sore throat lasts for longer than a week, or if you also have a very high temperature.

**FOR ALL DOSHAS**
- Gargle hot water mixed with either ½ tsp rock salt or 1 tbsp lemon juice.

**FOR VATA & KAPHA ONLY**
- Gargle tea made from ⅛ tsp chile flakes.

**Sore throat with hoarseness**

**FOR ALL DOSHAS**
- Make a lozenge (see p.203) using 1 tsp honey and 2 tsp long pepper, and take as needed.
- Drink ¼ tsp turmeric in 1 cup hot milk with ½–1 tsp cane sugar.

**Voice loss**
This usually heals within a couple of weeks, and these remedies will speed the process. Seek professional medical advice if it persists for more than 2 weeks, if you find it too painful to swallow food, or if you get repeated bouts.

**FOR ALL DOSHAS**
- To protect your vocal cords from strain, make a lozenge (see p.203) out of ¼ tsp ground ginger mixed with honey.
- If your voice or throat is hoarse, use cane sugar and water instead of honey. Gargle the mixture with 1 tbsp sesame oil.
REMEDIES FOR DIGESTIVE TRACT AILMENTS

There is no physical health without a healthy digestive tract – this is seen in the importance of agni (digestive fire) and digestion in the creation of dhatus (tissues) and ojas (immunity) in the body (see pp.26–27). These remedies bring quick relief to many minor ailments.

Appetite loss
These remedies are intended for those who have a loss of appetite but when food is still required, such as in times of stress. Loss of appetite due to disease is serious, and should be treated only under professional medical supervision.

FOR ALL DOSHAS
- Drink 1 tbsp lemon juice or ½ cup buttermilk with a pinch of rock salt up to three times a day. (Omit salt if you have high blood pressure.)
- Drink 1 tbsp lemon or ginger juice with ½ tsp honey up to three times a day.
- Take ½ tsp black pepper with raw cane sugar up to three times a day. Drink a glass of warm water after taking the pepper.

Constipation
This should be corrected as soon as possible. Alongside a proper diet, these remedies will help.

FOR ALL DOSHAS
- Drink a glass of hot water early in the morning; for vata and kapha, add a pinch rock salt. (Omit salt if you have high blood pressure.)
- Soak 1 part psyllium husk in 6 parts water and drink ½ cup three to four times a day.
- To support peristalsis, soak dill seeds in water overnight and take 1 tsp seeds before every meal.

FOR VATA & PITTA ONLY
- Drink 1 cup aloe vera juice in the morning and evening.
- Before going to bed, drink 1 cup lukewarm water or warmmed milk mixed with 3 tsp melted ghee.

DIET
- Increase the amount of vegetables that you eat.
- Figs, plums, raisins, prunes, dates, grapes, leafy vegetables, licorice, linseed, and molasses are all beneficial.
- Drink buttermilk.

YOGA
- Practice deep breathing, sun salutation, shoulderstand, forward bend, and cobra.

Diarrhea
These remedies support medical treatment and help maintain good agni (digestive fire). Seek professional medical advice if you have no appetite and experience weight loss, if your stool is dark and smelly (this may indicate bleeding), or the diarrhea doesn’t go away within 3 days. Always seek professional medical advice before treating a baby or child, and only use these remedies under professional medical supervision.

FOR ALL DOSHAS
- Take ½ tsp ground ginger with ½ tsp caraway seeds and 1 tsp jaggery twice a day; or take 1 tsp cane sugar in 1 tbsp lemon juice twice a day.
- Take ½ tsp ground coriander, ¼ tsp ground cumin, a pinch of ginger, and a pinch of salt in 1 cup warm water throughout the day. (Omit salt if you have high blood pressure.)
- To support stool formation, soak 1 tsp psyllium husk in 1 cup water and drink three times a day.

DIET
- Eat walnuts, poppy seeds, and soaked fenugreek seeds.
- Drink buttermilk and pomegranate juice.

CHILDREN
- Give the affected child a pinch of nutmeg and ¼ tsp ground ginger in some ghee.
Flatulence & bloating
This is most often a sign that vata is elevated, so these remedies are intended to help pacify vata.

FOR VATA & KAPHA ONLY
• Take ½ tsp ground ajwain, ½ tsp ground ginger, and a pinch black salt in 1 cup warm water before every meal. (Omit salt if you have high blood pressure.)

DIET
• Long pepper, lemon, coriander, fresh or ground ginger, mint, black pepper, fenugreek seeds, fennel, nutmeg, turmeric, ajwain seeds, aniseed, caraway seeds, cardamom, chamomile, cinnamon, cloves, cumin, bay leaves, and dill seeds are all beneficial.

BABIES
• Apply warm dill seed oil or castor oil around the navel.

Gastritis
These remedies can help reduce stomach acidity and increase agni (digestive fire). Seek professional medical advice if symptoms last more than 3 days, or if the pain is worsening.

FOR ALL DOSHAS
• Made a pill from ¼ tsp ground ginger, 1 tsp ghee, and 1 tsp jaggery, and take it 15–30 minutes before every meal.

FOR VATA & KAPHA ONLY
• Eat 1 tsp ajwain immediately after meals.

FOR PITTA ONLY
• Eat 1 tsp turmeric after every meal.

DIET
• Eat carrots, coconut, soaked fenugreek seeds, leafy vegetables, and mung dhal.
• Drink lemon juice in warm water.

• Avoid eating sour fruit, pungent spices, and yogurt.

Gastritis with stomach pain
Sometimes gastritis occurs with stomach cramps. In such cases, use these remedies to alleviate pain.

FOR ALL DOSHAS
• Drink a decoction of ground cloves. Clove reduces inflammation and acts as a local anesthetic.

Heartburn or acid reflux
Try using the following remedies when you have an empty stomach and after meals. Seek professional medical advice if you experience persistent heartburn over 3 weeks.

FOR ALL DOSHAS
• Drink a decoction of ground cloves. Clove reduces inflammation and acts as a local anesthetic.

FOR PITTA ONLY
• Eat 1 tsp turmeric after every meal.

Indigestion & weak agni (digestive fire)
Try these remedies on a daily basis to increase your well-being. See also diet for agni on pp.84–85. Seek professional medical advice if you get indigestion regularly or if the pain is worsening.

FOR ALL DOSHAS
• Drink 1 tbsp lemon juice and 1 tsp ginger juice in 1 cup warm water with 1 tsp honey every morning.
• Eat a bit of ginger-raisin chutney (see p.110) immediately before every meal.

FOR VATA & PITTA ONLY
• Chew ¼ tsp coriander seeds.

FOR VATA & KAPHA ONLY
• Eat ½ tsp fresh ginger with a pinch of salt immediately before each meal. (Omit salt if you have high blood pressure.)
• After heavy meals, drink a black pepper decoction.

FOR PITTA & KAPHA ONLY
• Eat ½ tsp fresh ginger mixed with 1 tbsp lemon juice and a pinch of rock salt as needed, but no more than once every 10 minutes. (Omit salt if you have high blood pressure.)
• Drink a strong tea or decoction of caraway seeds, coriander seeds (can also be chewed), fennel, or mint as needed.
REMEDIES FOR AILMENTS OF THE EYES, HAIR, SKIN, AND TEETH

This section includes ailments that affect the eyes, hair, skin, and teeth. Most remedies here are intended to alleviate the symptoms of the listed ailments. Some, such as many for the eyes and teeth, are general practices to improve general health and function.

Eyes
The eyes have a strong connection to the dosha pitta. The following remedies can be used to help improve vision.

FOR ALL DOSHAS
- Soak 2 threads saffron in 2 tbsp rosewater overnight and use the solution as eye drops.
- Drink 2–4 tsp fresh fennel juice daily.

FOR VATA & PITTA ONLY
- Take 1 tsp ghee mixed with ¼ tsp chickpea flour and ¼ tsp cane sugar.

Conjunctivitis
Take these remedies alongside conventional medical treatments. Seek professional medical advice if symptoms persist for more than 2 days.

FOR ALL DOSHAS
- Boil 1 part ground turmeric with 10 parts water, let it cool, then soak a cotton ball in it and apply to the eye.
- Steep 1 tsp ground cumin in 1 cup hot water. Apply the solution to the eye in an eye bath cup.
- Apply a decoction of coriander or juice of fresh cilantro to the eyes using a cotton ball.
- Apply a drop of honey to the eyes two to three times a day using a cotton ball.

Hair loss
Temporary hair loss can be caused by stress, illness, or treatment. These remedies aim to help alleviate hair loss. Seek professional medical advice if you have sudden hair loss, are losing hair in clumps, or your head itches or burns.

FOR ALL DOSHAS
- Make a paste from fenugreek leaves and apply to the scalp.
- Make a paste from roasted, ground fenugreek seeds and apply to the scalp. Wash off after 30–60 minutes.

FOR VATA & KAPHA ONLY
- Apply a paste of dill leaves to the affected area, or slowly heat 5–10 dill leaves in 1 cup sesame oil and apply.

Acne
These remedies aim to alleviate minor acne. Seek professional medical advice if you think you have severe acne.

FOR ALL DOSHAS
- Apply 1 tsp ground turmeric mixed with ¼ tsp lemon juice or ½ tsp honey to the affected area.
- Make a cumin paste and then apply as a face mask.
- Apply a paste of crushed caraway seeds with water or sesame oil.
- Apply a paste of nutmeg, ground turmeric, and black pepper.

Skin
Skin, blood, and pitta have a close connection. Anything that is bitter and cooling is often helpful, as these pacify pitta. Fenugreek, ground turmeric, and neem can be taken orally or applied locally to help alleviate skin problems.

Abscess
These remedies are intended to ripen an abscess or pimple and should be used under the supervision of a medical professional.

FOR ALL DOSHAS
- Apply a poultice made from black pepper to the affected area.

Complexion
These remedies are intended to improve complexion and rejuvenate your skin.

FOR ALL DOSHAS
- Make a paste from soaked fenugreek seeds and use it as a face mask.
- Apply milk mixed with a pinch of nutmeg to the skin up to three times a day.
- To clear skin, add some saffron to body lotion or apply a poultice made from saffron.
Dry, cracked skin
These remedies aim to alleviate dry skin. If problems persist, seek professional medical advice.

FOR ALL DOSHAS
• Apply ½ tsp ground turmeric mixed with 1 tsp ghee or castor oil.

Hives
Rashes usually subside in 1–2 days. Seek professional medical advice if a rash persists for more than 3 days.

FOR ALL DOSHAS
• Take 1 tsp ajwain seeds mixed with 1 tsp cane sugar after two of your daily meals.
• Boil 1 tsp mint and 2 tsp cane sugar in water and drink 1 cup up to three times a day.

Insect bites & stings
Usually bites and stings take only a few hours or days to heal. Seek professional medical advice if a sting covers 2in (5cm) or more, if it becomes infected, or if it doesn’t improve after 3 days.

FOR ALL DOSHAS
• Use tulsi oil, eucalyptus oil, and neem oil as mosquito repellents.
• Rub bites with tulsi leaves.
• Mix 1 tsp ground cumin with 1 tsp ghee and apply the mixture to the bite. This reduces pain and swelling, and counteracts the toxin.
• For wasp or bee stings, apply a poultice of crushed bay leaves.

Itching
Itchy skin can be caused by any of the doshas, most frequently kapha, then vata, and, least often, pitta.

VATA & KAPHA
• Apply mustard oil or a poultice made from mustard seeds.

Skin irritation or rashes
Rashes usually subside in 1–2 days. Seek professional medical advice if a rash persists for more than 3 days, or if it is accompanied by a fever.

FOR ALL DOSHAS
• Apply aloe vera gel with ground turmeric or a paste made from ground turmeric to the rash; remove after it dries. Do this three to four times a day. (It is best to use aloe vera gel with no added citric acid, as the acid counteracts the cooling quality of the aloe.)
• Apply a warm poultice made with ajwain paste to the affected area.
• Apply a paste made of fresh garden cress leaf to the affected area.
• Apply a paste of ground cumin or add 2 tbsp cumin to your bath water.
• Apply a paste made from ground green cardamom seeds.

FOR VATA & KAPHA ONLY
• Apply a warm paste of ground black cardamom and water, but do not apply to the face.

Teeth
Oral hygiene is seen as an integral part of daily hygiene in Ayurveda. Use the following remedies to keep your teeth healthy.

FOR ALL DOSHAS
• Chew neem leaves daily. (Neem is an antiseptic.)
• Eat a bit of sour food at the end of every meal. (The acid helps to keep your teeth clean.)
• Rinse your mouth with salt water every morning.
• Rinse your mouth with water after eating sweet candies or sugary foods.
• Clean your teeth with neem sticks.
• Practice oil pulling (see p.34).

FOR VATA & KAPHA ONLY
• Massage your gums daily with mustard oil mixed with salt.

Toothache
These remedies are mainly antiseptics and will relieve pain caused by a toothache. Seek professional medical treatment if the toothache lasts more than 2 days.

FOR ALL DOSHAS
• Chew 2 cloves up to three times a day.
• Apply clove oil on a cotton swab to the affected area. (Warning! Do not apply for too long, as it can cause ulcers.)
• Brush teeth with ground black pepper or Trikatu (a mixture of equal parts ground ginger, black pepper, and long pepper). Alternatively, make a decoction of Trikatu and gargle it.

FOR VATA & KAPHA ONLY
• Gargle mustard oil with a pinch salt.
• Gargle a decoction of black cardamom.
HOME REMEDIES FOR COMMON AILMENTS

REMEDIES FOR TRAUMA AND MUSCULOSKELETAL AILMENTS

Vata is aggravated by trauma, and pain is a vata function; kapha is most often involved in swelling; pitta causes redness and heat. Many of these conditions require immediate professional medical attention. If you are unsure, always seek professional medical advice.

Body pain (general)
If pain is severe or persists for more than 3 days, seek immediate professional medical advice.

FOR ALL DOSHAS
- For external pain, apply marjoram oil or ghee, nutmeg paste, or water with a warm paste made from crushed mustard seeds up to three times a day.
- Massage the affected area with a mixture of equal parts camphor oil and mustard oil, or ground fenugreek with equal parts mustard oil and cinnamon oil up to three times a day.

FOR VATA AND KAPHA
- For internal pain, take ½ tsp black cardamom, ⅛ tsp ground turmeric, and ½ tsp black pepper in 1 tsp ghee up to three times a day.

FOR PITTA AND KAPHA
- For internal pain, take ½ tsp green cardamom, ⅛ tsp turmeric, and ½ tsp black pepper in honey up to three times a day.

Bone fractures & osteoporosis
Always seek professional medical advice for these conditions. In both cases, there is loss of the bone dhatu (tissue). The ginger ensures that agni (digestive fire) is strong enough to produce new, healthy dhatu.

FOR ALL DOSHAS
- Drink 1 cup warm milk with 1 tsp licorice and 1 tsp ginger twice a day.

Burns (minor)
These remedies are intended only for minor burns, and should only be used after the affected area has been held under cold, running water for 10 minutes. For more serious burns, seek immediate professional medical advice. Honey is drying and cooling, while ghee and fenugreek leaves are cooling. This makes them effective at alleviating pain and helping a burn to heal.

FOR ALL DOSHAS
- Apply honey to the burn as needed.
- Apply a paste of fenugreek leaves to the burn as needed.
- Apply ghee to the burn as needed.

FOR VATA AND KAPHA
- Apply 1 tsp ground cinnamon and 1 tsp ginger heated in 1 cup sesame oil as needed.

FOR VATA AND PITTA
- Apply 1 tsp ground garden cress seeds as needed.

FOR ALL DOSHAS
- Apply 1 tsp ground cumin seeds as needed.
- Apply a poultice of soaked castor oil and clove oil.

FOR VATA & KAPHA ONLY
- Apply dry ground turmeric.

Osteoarthritis
These remedies are intended to alleviate pain and swelling. Always seek professional medical advice and use these remedies under professional medical supervision.

FOR ALL DOSHAS
- Apply 1 tsp ground cinnamon and 1 tsp ginger heated in 1 cup sesame oil as needed.

FOR VATA & KAPHA
- Mix 2 tsp garden cress seeds with 1 tsp lemon juice, crush in a mortar and pestle, and apply the paste.
- Mix 2 tsp garden cress with 1 tsp lemon juice and apply the mixture to the affected joint.
- Massage the affected part of the body with castor oil.

Tendinitis
If you think a wound has become unsound, always seek professional medical advice.

FOR ALL DOSHAS
- Apply an ice pack until the swelling is reduced, or if tendinitis. The best treatment is rest, and reduce swelling and pain.

FOR VATA AND KAPHA
- Apply mustard oil mixed with ground black pepper as needed.

FOR ALL DOSHAS
- Apply a poultice of tulsi or western basil.
- Apply a warm paste made from crushed long pepper.
- Apply a poultice of long pepper with rice bran.

FOR VATA & KAPHA ONLY
- Apply dill and give a warm bath containing castor oil.

FOR ALL DOSHAS
- Sprinkle ground turmeric onto the wound as needed.
- Apply a poultice made from cumin seeds.
- Sprinkle black pepper as needed.

Osteoarthritis
These remedies are intended to alleviate pain and swelling. Always seek professional medical advice and use these remedies under professional medical supervision.

FOR ALL DOSHAS
- Apply 1 tsp ground cinnamon and 1 tsp ginger heated in 1 cup sesame oil as needed.

FOR VATA & KAPHA
- Mix 2 tsp garden cress seeds with 1 tsp lemon juice, crush in a mortar and pestle, and apply the paste.
- Mix 2 tsp garden cress with 1 tsp lemon juice and apply the mixture to the affected joint.
- Massage the affected part of the body with castor oil.
Rheumatism & rheumatoid arthritis
These remedies are intended to alleviate pain. Both conditions indicate the presence of ama (toxins), so be sure to do practices that digest ama and strengthen agni (see pp.56–57).

FOR ALL DOSHAS
- Take 1 tsp ground ginger in 1 cup yogurt or milk curd up to three times a day.
- Boil 1 tsp ground garden cress seeds in ½ cup milk and take three times a day.
- Make a paste with boiled and crushed dill seeds using a mortar and pestle. Apply the paste to the affected area.
- Apply a warm paste of soaked marjoram, or take a bath containing a marjoram decoction.
- Take ½ tsp ground ginger with 1 tsp honey or ½ tsp castor oil three times a day after meals.
- Massage the affected area with equal parts castor oil and clove oil.

FOR VATA AND PITTA
- Take ½ tsp ground ginger with 1 tsp ghee three times a day after meals.

FOR VATA AND KAPHA
- Take ¼–½ tsp ground chile with honey up to three times a day.
- Massage the affected area with castor oil mixed with chile as needed.

Sprains
Swelling is often a sign of kapha, which can be alleviated by heat and dryness. Any trauma aggravates vata, which can be alleviated by heat and stability. Seek professional medical advice if you are unable to move the joint, if the limb gives way when you try to use it, or if pain is particularly intense.

FOR ALL DOSHAS
- Apply an ice pack until the swelling goes down. For painful sprains, apply a hot water bottle.
- Massage the affected area with bay leaf oil or castor oil.

Tired feet
This remedy will ease pain or tiredness in the feet.

FOR ALL DOSHAS
- Take a warm foot bath containing a bay leaf decoction each day.

Wounds
Any wound should be dressed with an antiseptic and, if serious, medical expertise should be sought.

Fresh wounds
Use these remedies to treat wounds immediately after they occur.

FOR ALL DOSHAS
- Sprinkle ground turmeric onto the wound. (It is an antiseptic and will stop the bleeding.)
- Take ¾ tsp ground turmeric mixed with ½ tsp cane sugar three times a day for up to 3 days. (It will dissolve any bruising and reduce swelling and pain.)

Old wounds
Use these remedies to treat wounds that are not healing properly because a scab is not forming effectively.

FOR ALL DOSHAS
- Apply a poultice of long pepper with 1 tsp honey. (This increases circulation, reduces swelling, and cleans the wound.)
- Apply a thin, watered-down paste made from turmeric.
- Apply dry ground turmeric.

Infected wounds
If you think a wound has become infected, seek professional medical advice and use these remedies only if approved by the professional treating you.

FOR ALL DOSHAS
- Apply a paste of ground ajwain in hot water.
- If there are ulcerations, apply fresh mint juice or mint oil up to three times a day.

Tendinitis
Any dosha can be involved in tendinitis. The best treatment is rest, but you can also use the following remedy. Seek professional medical advice if you are unable to move the joint at all.

FOR ALL DOSHAS
- Apply 1 tbsp grated ginger mixed with 1 tbsp honey to the tender area as needed.
GLOSSARY OF TERMS

agni The digestive fire; it is required to properly digest food, create healthy dhatus (tissues), and produce ojas.

ama Undigested food that acts like a toxin. It can be digested (removed) by healthy agni.
asana A pose that is used as a physical exercise during a yoga session.
ashtanga The classical system by which yoga and meditation are practiced. It literally means “eight steps.”
Ayurveda The classical Indian medical system; it encompasses healthy living and preventing and treating disease.
Ayurvedic water Water boiled for up to 20 minutes and taken hot. It activates agni (digestive fire) and aids digestion.
brahma muhurtta The time at dawn from 4-6 a.m. when sattva is dominant. It is particularly good for yoga, meditation, and spiritual practices.
chakra point Points on the body that energy can be focused on and channeled through. They are used for practices such as meditation and pranayama.
constitution A person’s constitution (or “prakriti” in Sanskrit). It is determined at conception and is the proportions of the three doshas in every individual.
corpse pose The pose used for relaxation during yoga sessions.
dhatu The seven body tissues; these make up the body’s physical form.
dosha Three energies that make up the body and mind. If unbalanced (minor imbalances called “irritation” and major called “elevation”), they cause ill health.
guna (qualities) Means quality or characteristic. There are twenty major physical gunas. For the gunas of the mind, see three gunas, the.
hatha yoga Focuses on asanas and pranayama in order to control prana (life energy) with the aim to control the mind.
kapha The dosha that gives substance, cohesion, lubrication, and strength.
mahas The body’s waste products (stool, urine, and sweat).
kapalabhati (lung purification) A yogic breathing exercise.
karma yoga The practice of selfless service of others.
mantra A phase or sound that is used for meditation or mantra practice.
nasya Application of oil to the insides of the nostrils either as part of the daily hygiene routine or as a panchakarma treatment.
nasal point A teapot-shaped vessel used to pour salt water into the nostrils to clear the nasal passages and sinuses.
nirguna mantra An abstract mantra relating to the Self.
oil pulling The practice of rinsing the mouth with oil as part of the daily hygiene routine.
ojas The “eighth” tissue, it is one of the substances that anchors prana (life energy) in the body and protects the dhatus from the damaging effects of the doshas.
panchakarma Body treatments that cleanse the body of excess doshas.
pitta The dosha that is responsible for all processes of transformation in the body.
pitakriti see constitution.
prana Life energy, required for the body’s motor, organ, and sensory functions.
pranayama The practice of energy control through conscious breathing.
raja yoga Exercises that involve mental control and meditation.
rajas (rajasic) One of the three mental gunas. It is the energy of restlessness.
rasayana Restorative herbal preparations that create healthy dhatus and increase resilience.
saguna mantra A concrete mantra related to a deity.
sattva (sattvic) Three mental gunas. It is the energy of clarity and harmony.
Self, the This is consciousness (often described as the soul). It is separate from the mind and physical body.
shirodhara A body treatment; oil or buttermilk is poured onto the forehead.
solar plexus The chakra point found behind the stomach.
tamas (tamasic) One of the three mental gunas. It is inertia and lethargy.
third eye A chakra point found in the centre of the forehead between the eyes.
three gunas, the The three qualities of the mind (sattva, tamas, and rajas).
vata The dosha responsible for all of the body’s movement and sensation.

ABOUT THE AUTHORS

Yoga Acharyas, members of the board of directors of the International Sivananda Yoga Vedanta Centres and senior teachers of the Sivananda Yoga Teachers’ Training Courses:

SWAMI DURGANANANDA
Swami Durgananda established the Sivananda Yoga Vedanta Centres in Europe on the request of her teacher Swami Vishnudevananda. Swami Durgananda has taught several generations of yoga students, as well as teachers, about how to apply the principles of Ayurveda and yoga in order to practice a healthy and spiritual way of life. Her vision and advice is the guiding thread of this book. swd@sivananda.net

SWAMI SIVADASANANDA
Swami Sivadasananda compiled the chapter on asana, pranayama, and relaxation based on the teaching system and the practical inspiration of his teacher Swami Vishnudevananda. He teaches courses and workshops around the world with profound knowledge and a dynamic and precise teaching style. sws@sivananda.net

SWAMI KAILASANANDA
A senior disciple of Swami Vishnudevananda, Swami Kailasananda shares her many years of dedicated practice and teaching experience in the meditation section of this book. swk@sivananda.net

The board members would like to thank the other contributing members of the International Sivananda Yoga Vedanta Centres:

CORDULA INTERTHAL
We would like to thank Cordula Interthal (Chandrika) for her dedication in writing the chapters on the body, Ayurvedic lifestyle, maintaining health, food, visiting an Ayurvedic practitioner, and home remedies. Cordula lives in Munich, Germany, where she combines her talents as medical doctor, Ayurvedic practitioner, and yoga teacher. www.devi-ayurveda.de

SWAMI BHAGAVATANANDA
We would like to thank Swami Bhagavatananda, a senior teacher of the Sivananda Yoga Vedanta Centers, for the skilful compilation of the recipe section. swb@sivananda.net

ACKNOWLEDGMENTS

AUTHORS’ ACKNOWLEDGMENTS
We would like to thank Ayurveda-Acharya Shanti Kumar Kamlesh from Lucknow, India, for sharing his practical and enthusiastic knowledge of Ayurvedic diet and lifestyle during countless visits in the Sivananda Centers during the past 20 years.

Cordula would like to thank the Seva Academy in Munich, and especially her Ayurveda teacher Dr. Neelesh Taware, for generously sharing their knowledge and expertise.

PUBLISHER’S ACKNOWLEDGMENTS
The publisher would like to thank Soma Chowdhury, Janashree Singha, Madhurika Bhartwaj, and Nonita Saha for their help editing the recipes, Corinne Masciocchi for proofreading, and Vanessa Bird for creating the index.

PICTURE CREDITS
The publisher would like to thank the following for their kind permission to reproduce their photographs:
